NEXT MONTH: Our CoCo has music to sooth the savage hacker. It's summer time and the computing is easy, so get in the mood with our June issue. Good golly, Miss Molly, don't you know? It's the Music issuel The sounds of your CoCo can take you on a stairway to heaven when you try these solid-gold musical gems. But, we've only just begun. You'll twist and shout with glee because we have included our usual chorus of useful and entertaining programs.

Of course, that's always been our fortissimo and the key to the RAINBOW's success. So, be sharp and get the Color Computer magazine, THE RAINBOW.

LETTERS TO THE RAINBOW

The Multi-One-Liner Program

Editor:

As much as I enjoy the one-liners, they are a problem if saving to disk. They use up a whole granule even though they do not require it. So I thought the best thing to do was combine them into one program.

It works this way. Start typing the oncliners at 100 and space each one 10 lines. Put a RETURN every five spaces after them. Set up an INPUT and DN GDSUB at 90 and 95. Then create a menu such as 1-Patterns, etc. By entering the number choice, the program jumps to the one-liner and returns if it doesn't get caught in a continuous loop. There are a few things to remember. Some lines call themselves so you must be sure to put in the correct line number, Some oneliners do not end and must be broken into via the BREAK key so you will have to restart the program. You may find a few that might cause a problem if put into a larger program. Those you will just have to leave out,

This method saves a lot of disk space, especially if you save all the programs in an issue.

suc. Robert Tos

Robert Toscani Philadelphia, PA

BACK TALK

Editor:

l agree with Pastor Mark Camp's letter in the March 1986 issue [Page 8] and would also like to hear about people using their CoCos for the Lord's work. I am a church treasurer and have been doing all the bookwork for over a year now with VIP Calc. It even prints the checks.

l also use VIP Database and VIP Writer extensively. The mail merge features are particularly effective for sending letters to the membership. If anyone would like more information, my Compuserve ID is 74156,3374 or on Delphi it's REPNY.

Jim Reed's (March 1986) editorial sounds awfully familiar. Right on, Jim.

Richard E. Pratt Saratoga Springs, NY

The VCR Connection

Editor:

In the March 1986 issue of RAINBOW, there was an inquiry from John Carstens [Page 6] asking how to interface the CoCo to a VCR, I wanted to make the same connection so I bought Archer Video Selector from Radio Shack for \$39. This switcher, mounted with velcro to the side of my TV monitor, is handy to the TV, VCR, CoCo,

digitizer, etc. It makes possible the connection of the CoCo to the VCR. To my knowledge, it is the best interface you can find to tie your entire system together.

If you would like more information on the Archer Video Selector hookup, call (717) 388-6776, or write me at R.D. I, Box 8, 18615. Please enclose a stamped, self-addressed envelope.

George Winterstein Falls, PA

Phooey on Financing . . .

Editor:

Bill Bernico presents a neat little program in his "Financing: The Economic Advantage" (March 1986, Page 71), however, I feel obligated to point out that one should not just blindly accept the numerical values this program produces. Although the results are accurate the analysis is somewhat incomplete...

James W. Stelly Houston, TX

Editor:

cash for his car and start a new nest egg with his monthly payments. By doing this, one would have \$15,494.28 in the bank at the end of the 48 months, \$1,321.61 more than he has by following Mr. Bernico's advice (with all figures based on monthly compounding).

Richard T. Behrens

ra 1. Benrens Boulder, CO

Editor:

... If you pay cash, you do not have to pay \$270.76 each month for four years. Put this much money each month in that same 8.75 percent interest savings account and your savings will total out to \$15,494.28. That's much more than you would have in the account had you simply left the \$10,000 in there for the four-year period. I used the Personal Savings program by Edward Carson from the November 1984 [Page 132] RAINBOW to make these calculations.

Mike Knolhoff Sterling, 1L

Editor:

Mr. Bernico made a logic error, not a program error, in writing his Cash vs. Financing program. . . . when someone claims you gain money by borrowing money at a high rate of interest and investing at a low rate, I would think this might raise an eyebrow or two. That's like finding the elixir of life!

James M. Wright Pittsburgh, PA Editor:

... The math is correct and the salesperson has not lied. However, you have been misled by focusing on the interest cost. The focus should be on assets at the time the loan is paid off ...

Milton D. Mobley
Tacoma, WA

Editor:

Bill Bernico's program has much value and requires only little adjustment to be a very useful program. In this case, however, a buyer would be wiser to pay cash for the car and start a new savings account in the amount of \$270.76 each month. In Bernico's example, the spread in interest rates is too large to favor financing.

Where did he go wrong? Bernico's error was in not considering the "opportunity cost" concept with which financial advisors and economists are always concerned. Specifically, he overlooked an alternative opportunity available; consideration of the earning potential of a monthly \$270.76

investment.

R. Scott Boaz, Ph.D. Southern Arkansas University Magnolia, A R

... An Incomplete Analysis

Editor:

Since my Cash vs. Financing program appeared in the March 1986 issue, I have received several letters from readers. Their tone ranged from "Oops, Bill, you made an error in logic" to "Help! Police! Fraud!" While I respect everyone's right to their opinion, I don't think I deserved some of that criticism.

My purpose was not and is not to try to make anyone part with their money. I admit I made an error in logic by not fully explaining that this program explored only one avenue of financing. I do not claim to be a financial wizard, just a CoCo enthusiast who likes to program. I came upon the two formulas for this program in a book from my local library. After experimenting with them for a while, I decided to combine them in a single program as a comparison. The result was an incomplete analysis.

I'm sure there are a lot of people more familiar with finance who perceived that program as an attempt to deceive people into financing rather than paying cash. Explicit examples have been brought to my attention proving just the opposite to be more beneficial. What my program didn't go into was all the variables and extenuating circumstances associated with financing. While each of my formulas was correct and workable separately, they didn't show the entire story behind comparing the two methods. For this oversight I apologize.

Human nature being what it is, I can understand why people are quick to point out mistakes but slow to praise for something well done. While I've received dozens of letters and phone calls from people who've enjoyed my past programs, I can't help but think that I may have let a few readers down. In the future, I will stick to areas where I'm a little more sure of mysele.

Bill Bernico Sheboygan, WI

Teaming up for Adventure

Editor:

Is there anyone out there who has a good Adventure idea (scenario), but can't put it

in a program?

Thave enough knowledge in BASIC to write a program, but lack ideas. Please send a detailed explanation of your idea, and together we'll produce a great Adventure. My address is 939 S. Harriet, 46151.

Jim Cockrum Martinsville, IN

HINTS AND TIPS

Editor:

I recently purchased the Radio Shack Micro Illustrator program Cat. No. 26-3278. There was no mention either in the catalog or in the instruction manual that OS-9 was required for this program, It worked fine until I tried to save a picture to disk. I then learned that I must have an OS-9 formatted disk to use with the Micro Illustrator. It seems like a great graphics program, but if I want to use it with Telegraphics or any other screen dump program that I already have, I am out of luck.

It seems to me an OS-9 requirement should be clearly stated on the outside of the package. Perhaps your readers would appreciate being warned about these unstated

requirements.

Robert L. Wallace New Philadelphia, OH

Control Key Patch

Editor:

This is a patch to use the CTRL key on the \$4.95 keyboard Radio Shack was selling with Keyboard Shorthand in RAINBOW, February 1984.

Add two new lines to the source code:

1012 CMPA #\$BD *Don't allow ctrl key to 1014 BEQ WAIT *print a = to the screen

And change this line to read:

1190 ANDA #\$40 *Ctrl key pressed?

This allows you to use the control key instead of the down-arrow key.

Milt Webb Jacksonville, FL

A Better Way to Type in Listings

Editor:

This is in response to a letter submitted by Charles Roman of Bellaire, Ohio. In the January 1986 issue of RAINBOW [Page 8], he described his method of entering listings into his computer with the use of "Post-it" notes. He might like to consider another method.

Needlework people, especially embroiderers, use a metal plate about 8 by 10 inches behind their graph and place magnetic strips both up and down to keep track of where they are on the graph. They move the magnetic strip as they proceed.

You might go to a needlework shop that caters to embroiderers. When I purchased mine, they had to order it for mc. I have

found it most helpful.

Theresa Kelly Seattle, WA

Tips Abroad

Editor:

Gord Lewin's article "How To Figure Foreign Currency Exchange Rates," RAIN-BOW, March 1985, Page 161, has proven to he extremely useful. In order to obtain a more precise printout, I modified Line 250 by adding .## to the print format. This allows both dollars and cents to be printed, as currency exchange rates are usually fractional.

Anyone calling Delphi from Ontario, Canada can get through on Tymnet's Toronto trunk line. Call (416) 364-9620 and follow the Tymnet instructions as they appear in the Delphi advertisement in THE RAINBOW. This line supports XMODEM protocol and is free of charge. Delphi also has a Toronto line at (416) 881-8650, again at no charge.

Would anyone who knows of a graphics dump program that works for the Mannesman Tally Spirit 80 please get in touch with mc at 30 - 1400 Mary Street N., Canada L1G

Carl McEachern Oshawa, Ontario

REQUEST HOTLINE

Editor:

My wife and I have recently taken over the management of a small 20-room motel operation. We would like to use our TRS-80 Color Computer for as many applications as possible.

We have been searching for a program that would let us use our system for front office registration of our guests. The program would need to be a calendar that would list by the month, week and day the following information: guest's name and address, room number, arrival and departure dates, room type, and amount and form of payment.

We need this type of program so we can see at a glance what rooms are reserved or occupied on a given day. Any help would be most appreciated. Write us at 221 Vine Street, Apt. 42, 19106.

Harry B. Koplin Philadelphia, PA

Pedigree Program

Editor:

I hope you or one of your readers can help me locate a program for the Color Computer for rabbit pedigree/herd management. It is available for many other computers but not the CoCo. Any suggestions would be helpful, even the recommendation of a program that could be adapted for this purpose. Write me at R.R. I, Box 294, 46031.

Sarah Teuscher Atlanta, IN

Coin Collecting

Editor:

Please inform me of the availability of a cassette program that could be used to keep an inventory of a small coin collection, which my grandson has. Or, perhaps a printed program might be available somewhere that I could use on my 64K Color Computer 2. My address is 202 Wembridge Drive, 13057.

Robert Frankis East Syracuse, NY

Anyone for a Little Packet Radio?

Editor:

I would like to contact any readers of RAINBOW who are using their CoCos for packer radio communications. I would be glad to hear from others who would like to try packet radio. Please write to me at 5131 Raywood Lane, 37211.

Brian Carling Nashville, TN

Wishing for a CoCo Wrestling Match

Editor

I am a wrestling fan and I would like to know if any company has plans to make a wrestling game for the CoCo. Since Diecom Products made four of the popular arcade games (two of which are karate and boxing), they might make one of the arcade wrestling games.

Greg Tarczynski Chicago, IL

Editor:

I need help in locating a progre can use with my part-time bug a 64K Color Computer, on

May 1986 THE RA.

cassette player and a Radio Shack DMP-130 printer. I do not know how to program and do not have the time to learn.

My part-time business is as a beauty consultant and manager. I need a program that will allow me to enter the order form once and then check off the items purchased by a customer at each show. I would then like to be able to have the orders totaled, tax added and the discounts ligured in. I also need to file these orders by customer's name, address, phone number, what products she ordered and on what date. Another option needed is to be able to keep track of my expenses, earnings and sales. I need to be able to keep track of the sales of the girls on my staff as well as a calendar of shows for both myself and my staff.

At present, I am using my computer primarily for word processing using Telewriter 64. My full-time job is as a social studies reacher, and I would appreciate any suggestions for a program that I could use for tests with a variable number of true/ false, multiple choice, matching and discussion questions. I could also use a program that could be used as a grade book, keeping grades by numerical grades for six weeks, keeping that average for three six-week periods and then keeping a semester average. I need to be able to get a hard copy printout during the six weeks showing the average to that point, as well as at the cud of the six weeks, semester and the year.

Call me at (804) 541-8170 after 4 p.m., EST, or write me at 8915 Teakwood Drive, 23842.

Ellen R. Rusnak Disputanta, VA

Editor's Note: Sec "Expense Tracking and Management" on Page 122 of the March 1986 Business/Finance Issue, Maybe this program can be of some help to you.

INFORMATION PLEASE

Editor:

I have just purchased a Radio Shack FP-215 flathed plotter at a substantial savings. My concern is that there is no commercial software to drive this for the CoCo, and was sure someone could provide some help. Write to me at P.O. Box 14, 28706. Note: all programs in the manual work with the CoCo if you substitute the '7#-2," ' for LPRINT.

Harvey Lindsey Balfour, NC

Apple Lags Behind

Editor:

I have just purchased a Dragon 64 computer and am interested in getting a schematic and I/O related memory map for it. The Dragon appears to be basically the same machine as the CoCo and I would like to know if anyone out there has had any success with making them more compatible. I have a 64K CoCo at home and I love it; sold my Apple because it couldn't keep up

with my CoCo, My address is PSC 1, Box 7205, Yokota AB, Japan, 96328.

Stephen Blair APO San Francisco, CA

Code for Condensing

Editor:

In your January 1986 issue of RAINBOW, Page 210, there is a one-liner program called Labeler. I am using a CoCo 64K model #3127 and a DMP-105 printer. The program works just fine. My question is, what changes can I make to have the printing in either condensed or compressed type instead of standard print?

Harry Marcus Las Vegas, NV

Editor's Note: Check your printer manual to find the codes required to accomplish these styles. Then just add lines at the beginning of the program, such as:

PRINT#-2, CHR\$(X)CHR\$(Y)

where 'X' is the escape code (27) and 'Y' is the code for what you want the printer to do.

Editor:

Can you tell me where I can find a tape to disk program for my CoCo?

E, R, Dillon Huber Heights, OH

Editor's Note: See "A Tape to Disk Transfer Vehicle" by Roger Schrag on Page 48 of the January 1984 issue.

Cat in the Contents

Editor:

If anybody knows of a FORTRAN program for the CoCo please drop me a letter at Station A, Box 172, 39470.

I would like to thank you for adding the "CoCo Cat" to the Table of Contents.

Joe Polk Poplarville, MS

Editor:

Does anyone know how to make the CoCo Max work with the PB,I, Inc. C-C Bus (multipack)? The phone number listed for PBJ is disconnected.

Roger Alexander Bellingham, WA

Editor's Note: The new phone number for PBJ, Inc. is (201) 523-8663.

Telling it Like it is

Editor.

I have owned my CoCo for four years, have the premier issues of several CoCo magazines and have read RAINBOW all during that time. I have agreed and disagreed with many things I have read but never have I so totally agreed with anything until I read Mr. Reed's column, "Building

March's Rainbow." In a few words, Jim has said it all about why we are what we are and how we got here. Just as articulate was his appeal to Tandy. Perhaps this should be the start of a campaign to get Tandy to do something about a new CoCo before the fast-moving, high-tech world leaves them behind!

Thanks, Jim, for saying what we all feel!

Larry R. Cadman

Monroe, Mi

Editor:

Your March 1986 article [Page 16], "Building March's Rainbow," really hit the button... my problem is in having time to run any software between all the mods that are underway.

John C. Burke Fremom, CA

KUDOS

Editor:

Like many readers I have learned most of what I know about computers from my CoCo and from the many great articles that have appeared in THE RAINBOW. When I first started, many of the programs and articles in THE RAINBOW were "way over my head." Well, now that I have become proficient in BASIC and speak fluent EDTASM+, I find going back to thuse early issues a real bonanza. I constantly re-read every issue I have and continue to discover new information. Take it from me, don't let your old RAINBOWS gather dust. Read 'em again and again and again.

Here is a bright screen POKE that works on my Disk extended BASIC 1.1 CoCo.

POKE 359, 57: SCREENO, 1

This POKE allows you to remain in this screen mode and continue programming, etc. Thank you for a fine magazinc.

Milt Wrbb Jacksonville, FL

Laudation to the Lamonicas

Editor:

My wife bought our CoCo as my Christmas gift, I was a bit bewildcred at first, but now I can't stay away from it. I am certainly enjoying the programs submitted by Mary and Jim Lamonica. Our children are using the math program they submitted ["CoCo Math Class," January 1986, Page 88], and the results are phenomenal! Please present more of the Lamonicas work when possible.

Robert Miller Beuverton, OR

Dazzled by the CoCo Crowd

Editor:

The three years I have had RAINBOW I have been dazzled at all of the programs people send in. I would like to congratulate them and tell all of you CoCo users out there—keep it up!

Chris Curtis Walling, TN

"CANNED SOFTWARE FOR MY COCO?"

Choose Radio Shack's Dynacalc™ program—all you add is data.

Want a powerful spreadsheet program for your Color Computer? Then reach for Dynacalc, a high-energy worksheet chocked full of performance features (26-3275, \$99.95). With disk-based, high-performance Dynacalc, your Color Computer system helps keep your figures under control.

Calculated to please

The Dynacale recipe keeps your budgetary diet well balanced. Need help in calculating your personal budget, cash management, inventory analysis, income-tax preparation, or any other complicated computational courses? Leave it to Dynacale. You can get instant answers to "What if . . .?" questions.

Quick and easy to prepare

Dynacale takes the complex planning schemes you have cooking up in your head and lays them out on the table. Why spend all day in the kitchen with a calculator, pencil and eraser when you can get results at the push of a key?

With Dynacalc you simply add your basic ingredients (numbers, formulas and labels) to a well-organized grid of columns and rows. Then you can adjust the recipe to your taste. Change a single ingredient and your entire worksheet is automatically recalculated. You can test the outcomes of various plans and strategies in an instant, What a timesaver!

Come shop with us

Stop by your local Radio Shack and pick up Dynacale right off the

shelf. And while you're there, take a look at our complete stock of nourishing software. Or send for our new 1986 Software Reference and Computer Guide. We've got classic programs for every taste!

Looking for Music's Documentation

Editor:

Before I had a chance to try out a new Music plug-in cartridge, the little documentation booklet was lost. Tandy has discontinued this item and the local dealers are unable to obtain any information on it. If you or any of your readers could help me get a copy to buy outright, rent or loan, it would be much appreciated. I might even share some royalties from my first published composition. The catalog number of the cartridge titled Music is 26-3151 and I suppose the booklet I lost has the same number. Your reply is anxiously awaited at 2402 West 16th Street, SP. G-9, 85364.

Norman Drunnnond Yuma, AZ

PEN PALS

Editor:

Anyone who would like to be pen pals please write me at 741 Alicia Walk, Apt. E, 44306.

Keith Selbee Akron, OH

• I am 16 years old and looking for CoCo users around the world who would like to be pen pals. Please write to me at 425 Indiana Avenue, 44420.

Melissa Arquilla Girard, OH

• I am looking for a pen pal, someone to write letters to. My address is Rt. 2, 73086.

Brandon Knight Sulphur, OK

• Anyone interested in joining a pen pal elub called "The Super K Club" may do so if you have an MC-10 or CoCo 2 with memory between 4K to 64K. You must have a cassette recorder. My address is 136 S. 15 Street, 18042.

Nevin Keller Easton, PA

• I am interested in geiting a CoCo pen pal. If anyone is interested, I am 18 years old and have a 64K CoCo 2, disk drive and DMP-105 printer. My address is 2081 Marshland Drive, 29407.

Ron Clifton Charleston, SC

 I would like to have a few pen pals. If you would like to be one, I have a 64K CoCo 2 with tapes. My address is Rt. 3, 104 Jimy Lane, 75662.

> Henry Harvey Kilgore, TX

Henry, Meet Michael

 I am looking for a pen pal. I have a 32K CoCo 1 with a disk drive or tapes. My address is Rt. I, Box 268H, 75662.

Michael Mitchell Kilgore, TX

 1 am 12 years old and would enjoy having pen pals in such places as Canada and Australia, and places away from where I live. I would also enjoy hearing from people locally. My address is 627 N. West. 79065.

> David Cumpston Pampa, TX

 I would enjoy corresponding with all CoCo nuts out there. I can be reached at Rt, I, Box 63A, 76076.

Rick Bullon Poolville, TX

• I am looking for another CoCo user (any age) that would be interested in being pen pals. I am 14 years old and have a 64K ECB with drive, recorder and printer. My address is 751 Morning Glory Lane, 53511.

Paula Vaske Beloit, WI

I would like a pen pal no older than 13.
 Must know a little about computers. If interested, please write to me at 11763 82A
 Avenue, Canada V4C 2E5.

Don Ellis Delta, British Cohumbia

 I am interested in finding a computer pen pal. My address is P.O. Box 176, Canada VOX 1HO.

Shawn Welles Cultus Lake, British Columbia

 I am interested in being pen pals with any CoCo users in the world. My address is 1475 Main Street West, Canada L8S 1C9.

Norm Van Bergen Hamilton, Ontario

 I would like to correspond with Color Computer users in other countries. I use a 64K CoCo, a CCR-81 recorder and a DMP-110 printer. My main interests are in utilities, databases, spreadsheets and any application programs that use the CoCo to its potential. Jim James

P.O. Box 1362 Orange, New South Wales Australia 2800

• I have a 16K Extended BASIC CoCo 2 and Tandy FD-500 disk drive (1 intend to expand to 64K in the near future). I am

interested in corresponding with someone with the same setup.

W. Boardman P.O. Box 29 Port Lincoln, S.A. Australia 5606

 I am interested in having a pen pal in America, especially those who play Adventure games. I am 40 years old.

Dave Hansch 38 Sandells Road Tecoma, Victoria Australia 3160

 Anyone interested in having a pen pal in Australia please write to me.

Pen Pal 7 Graham Street Innisfail, Queensland Australia 4860

I'm Brazilian and a new RAINBOW reader.
 I own a CoCo 2 with 64K ECB and I'm looking for CoCo (or compatible) owners in the U.S.A. or anywhere.

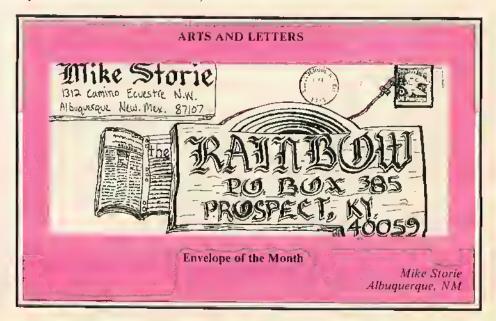

Anthony Fernandes Lima Avenida Atlantica 538/101 Lenie, Rio De Janeiro, R.J. Brazil 22010

 Please print my name and address for any CoCo owner who would like to get in touch and be pen pals.

Herman Aalderink NOJN/DU7 536 Tinaan, Naga Cebu, Philippines

THE RAINBOW welcomes letters to the editors. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect, KY 40059, Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or space.

Letters to the editors may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS.

"CANNED SOFTWARE FOR MY COCO?"

Choose Radio Shack's TSEDIT and TSWORD—all you add is data.

Looking for low-cost word processing that's got more vitamins than the average alphahet soup? Then pick TSEDIT word processing (26-3264,\$34.95) and TSWORD text formatting (26-3267, \$39.95) for your disk-based, 64K Color Computer system.

Packed with the nutrition you need for "wp-power"

TSEDIT comes with more than the minimum daily requirement of powerful features: full-screen editing, true lowercase letters, side scrolling, variable character-display size, global editing and multiple file merging. It's got everything you need to write a spicy novel, a tasteful resume, a luscious letter, or even a delicious . . . recipe!

Mix with TSWORD to create gourmet "masterpieces"

TSWORD interacts with TSEDIT to give your documents a polished, professional appearance. After you type your text, TSWORD presents a graphic "layout" of each page. You can experiment with several format standards and see the effects of your decisions instantly with one quick "taste-test."

TSWORD lets you set up or change such format standards as: top, bottom and side margins, paragraph indentation, running headers and footers, printing fonts, centered lines, tabs, justification, linespacing and page breaks. There's everything you need to whip up delectible four-star servings.

Come shop with us

Stop by Radio Shack and pick up TSEDIT and TSWRITE right off the shelf. And while you're there, take a look at our complete stock of nourishing software. Or send for our new 1986 Software Reference and Computer Guide. We've got classic programs for every taste!

am trying to learn how to fly — airplanes, that is! In some ways, it is not as difficult as using a program like Worlds of Flight, but in other ways it is much more so. I think what really makes it different is that I know if I crash the plane in a Simulation on my CoCo, I can just start over. But, if I am a couple of thousand feet in the air in a Cessna 172 and crash, that isn't a Simulation and I can't restart it.

So far, I have managed to keep from a "crash and burn" (as my flight instructor puts it), but that is about all I can truthfully say. Yet, another part of this learning-to-fly project has been almost as interesting as the flying itself, and that is the ground school.

Ground school meets one evening a week for three hours and that is where we learn the non-flying basis of flight. I like ground school because it gives me a chance to meet other people who have the same experiences as I do, and that way I find out I'm not all thumbs at the controls of the plane itself.

Some of the main things one has to learn at ground school are how to read different kinds of charts, how to compute various things and understand what makes a plane fly. The FAA requires pilots to know all these things and tests them on it.

One of the more fearsome aspects of ground school's first month is the famous "weight and balance" problem. Without getting into a lot of detail, weight and balance is simply making sure that all the things a plane carries — fuel, oil, pilot, passengers and luggage — neither exceed a certain weight nor are placed improperly in the aircraft to make it difficult (or impossible) to control it.

Weight and balance problems concern things I've never heard of: moments and arms. And, also some things I have heard of: pounds and center of gravity. There are some fairly complex calculations here and the first couple of times I did them, it was with a paper and pencil.

My arithmetic skills remind me of the sign on the back of the 18-wheel truck going up a 40-percent grade on a two-lane road. The sign reads: "I may be slow, but I'm ahead of you." My arithmetic may be slow, but it usually gets me there.

Slow bothers me, so I got a "formal" pilot "computer." That is really a misnomer, because pilots call almost anything that will do problems in mathematics a "computer." This is actually a hand-held calculator.

The calculator does have two advantages. First of all, if you tell it what kind of problem you want to solve, it prompts you on a little LCD screen for what sort of value to enter. Second of all, it is approved for the FAA written examination.

Telewriter-64 the Color Computer Word Processor

- 3 display formats: 51/64/85 columns × 24 lines
- True lower case characters
- User-friendly full-screen editor
- Right justification
- Easy hyphenation
- Drives any printer
- Embedded format and control codes
- Runs in 16K, 32K, or 64K
- Menu-driven disk and cassette I/O
- No hardware modifications required

THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners, And rightly so.

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with true lower case characters. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fen. With single-letter mnemonic commands, and menu-driven I/O and formatting. Telewriter surpasses all others for user friendliness and pure power.

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.

...one of the best programs for the Color Computer I have seen...

- Color Computer News, Jan. 1982

TELEWRITER-64

But now we've added more power to Teleuriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged rersion Telewriter-64. For two reasons.

64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer—16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 lext buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays; 64 × 24 and 85 × 24!! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formals with a single control key command.

The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, all on the screen at one time. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing.

RIGHT JUSTIFICATION & HYPHENATION
One outstanding advantage of the full width

One ouistanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.

Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines. Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

FEATURES & SPECIFICATIONS:

Printing and formalling: Drives any printer (EPVII/VIII, DMP-100/200, Epson, Okidata, Centronies, NEC, C. Hob, Smith-Corona, Terminet, etc).

Embedded control codes give full dynamic access to intelligent printer features like; underlining, subscript, superscript, variable font and type size, dot-graphics, etc.

Dynamic (embedded) formal controls for; top, bottom, and left mangins; line length, lines per page, line spacing, new page, change page numbering, conditional nerv page, enable/disable justification.

Menindriven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed times directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.

Supports single and multi-line herders and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from eassette or disk.

RAINBOW

File and I/O Features; ASCII formal files — ereate and edit BASIC, Assembly, Paseal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling eheckers [like Spell in Fix).

Cassette verify command for sure saves. Cassette autotelly means you type a load command only once no matter where you are in the tape.

Read in, save, partial save, and append files with disk and/or eassette. For disk; print directory with free space to screen or printer, kill and rename files, set default drive. Easily eastomized to the number of drives in the system.

Effiting features: Fast, full-screea editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor ip, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the seteen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the sereea in front of you. Commands require only a single key of a single key plus CLEAR.

...truly a state of the an word processor...
outstanding in every respect.
— The RAINBOW, Jan. 1982

PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the eapability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs \$49.95 on cassette, \$59.95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.)

To order, send check or money order to:

(Add \$2 for shipping, Californians add 6% state tax.)

Apple II is a mademark of Apple Computer, Inc.; Araji is a mademark of Atani, Inc.; TRS-80 is a mademark of Tandy Corp; MN-80 is a mademark of Epson Ametica, Inc.

After working out a couple of these weight and balance problems by hand to be sure I understood them, I "graduated" myself to the calculator. I punched in various data, and after a couple of seconds, out came the answer.

A couple of seconds?

Yep.

Darn. I guess computers have spoiled me. It sure seemed like a long time for just a simple calculation. So I programmed a CoCo to do a weight and balance problem — in BASIC.

The answer popped up almost in-

Which got me to thinking, first of all, that it is a shame I can't take the CoCo to the FAA exam with me. It does these calculations so much more quickly. And then it got me to thinking about speed as a relative thing, anyway.

Something like 15-18 years ago, I bought a hand-held calculator for \$50 that would add, subtract, multiply and divide. It didn't even have a "clear error" key. But I thought it was the greatest thing since sliced bread. A year later, I was able to get a hand-held for the same price that did basic math, had two memories, did square roots and the

like, and had a clear error key. It was also faster.

I'll save you the tortuous story of all the calculators I bought, each one with a few more features, before I finally bought a CoCo. And, likewise, I'll also save you going through the numbers of computers upon which I have laid my fingers since my first Color Computer came to live with me. But, suffice it to say, all have represented increases in speed, more or less.

". . . I have to wonder what price speed."

With the exception of the MacIntosh, which is so slow as to be almost painful, I have to wonder what price speed. One of the computers here is a Tandy 3000—an IBM AT look-alike that is, in fact, 33 percent faster than the AT. It recalculates huge spreadsheets in the wink of an eye. But how essential is it that it be all that fast? Frankly, the 3000 is only a couple of seconds faster with Micro-

soft's Multiplan than the CoCo is with Elite Calc or DynaCalc. How important are those couple of seconds?

I happen to think they are not all that important in the greater scheme of things. But maybe I am wrong. I remember a "great debate" on these pages a couple of years ago when two sides argued for months whether we really needed more than 32K.

I do not have the answer. But I'd like to have your opinion. Please write if you'd like to have your say. I think it would be interesting — for all of us.

I wonder how many of you have seen the very newest CoCo — the one where the logo of the Color Computer has undergone a slight change. Tandy seems to have decided that it will henceforth change the little red, green and red rectangles into little parallelograms. Or are they arcs?

If arcs, do they, as someone pointed out to me the other day, look suspiciously like the beginning of a rainbow stretching upwards?

Just wondering.

Lonnie Falk

The Coco Greeting Card Designer

The Coco Greeting Card Designer can be used to design and print custom Greeting Cards for all occasions including: Valentine's Day, Birthdays, Mother's Day and more.

It's easy to use and includes a library of predrawn Hi-Res Graphic Pictures! You can write custom messages on the cover and inside your cards in a selection of character fonts and sizes. An easy to use editor allows you to pick your type style, font size, and more. Two fonts and a selection of custom border patterns are included, and the easy to use editors allow you to create many more!

The Coco Greeting Card Designer requires a Coco or Coco II with a minimum of 32k, One Disk Drive (Disk Ext. BASIC 1.0/1.1, ADOS, or JODS). Some of the printers that the Greeting Card Designer supports are: EPSON RX/FX, GEMINI 10X or SG-10, C-ITOH 8510, DMP-100/105/400/430, SEIKOSHA GP-100/250, LEGEND 808 and GORILLA BANANA. Send an SASE for current list of other compatible printers. See Review in April 86 Rainbow . . .

YOU COULD FALL IN LOVE WITH

AUTOTERM!

IT TURNS YOUR COLOR COMPUTER INTO THE

WORLD'S SMARTEST TERMINAL

AND MOST LOVABLE

GOOD LOOKIN

AUTOTERM shows true upper/ lower case in screen widths of 32, 40, 42, 51, or 64 characters with no split words. The width ot 32 has extra large letters. Scrolling is torward, backward, and fast. Block graphics pictures are displayed automatically and can be scrolled.

The screen's top line shows operating mode, unused memory size, memory on/off, and capslock on/off. It also gives helpful prompts.

SWEET TALKIN'

KEY-BEEP can be on/off, Unacceptable keystrokes cause a lower pitched BOP! This ERROR-BEEBOP can be on/oft.

Talks to other computers with Full or Half Duplex; Baud Rate of 110, 150, 300, 600, 1200; Parity as even, odd, mark, space, none; 7 or 8 bit Word; any Stop Bits; all 128 ASCII characters; true line Break; XON/XOFF protocol; and optional line-at-a-time transmission. Able to send and receive text, block graphics, BASIC and ML programs. A 64K machine holds up to 45,000 characters (33,300 in HI-RES).

DUAL PROCESSING lets you review & edit while more data is coming in.

XMODEM for disk tile transfer.

Fully supports D.C. Hayes and other intelligent modems,

Talks to your printer with any page size, margins, line spacing, split word avoidance. Embed your printer's control sequences for boldface, underlining, etc. Narrow text can be automatically spread out.

You'll also use Autoterm for simple word processing and record keeping

You can display directories, delete files, transmit directly from disk, and work with files larger than memory. Easily maintain a disk copy of an entire session.

Compatible with TELEWRITER (ASCII) & other word processors.

SMOOTH WALKIN'

AUTOTERM moves smoothly and quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text, download information, file it, and sign-off; then edit the received data, print it in an attractive format, and/or save it on tile.

Editing is super simple with the cursor. Find strings instantly, too! Any operating parameter, such as screen width, can be altered at any time. Uncompleted commands can be cancelled.

PUTTY IN YOUR HANDS

The word processor can be used to create, print, and/or save on file your personal KSMs. They let AUTOTERM act like you. For example, it can dial through your modem, sign-on, interact, perform file operations, & sign-off; an entire session without your help. KSMs can answer the phone, prompt the caller, take messages, save them, hang-up, and wait for the next call. The KSM potential is unbelievable!

NO OTHER COMPUTER IN THE WORLD CAN MATCH YOUR COCO'S AUTOMATIC TERMINAL CAPABILITIES!!!

WHAT THE REVIEWERS SAY

"AUTOTERM is the Best of Class." Graham, RAINBOW, 6/83

"The AUTOTERM butfer system is the most sophisticated — and one of the easiest to use..." Banta, HOT CoCo, 9/84

"Almost a tuil teatured word processor..."
Ellers, RAINBOW, 11/84

"AUTOTERM's excellent errorhandling routines, thorough documentation, and logical, easy-to-use command structure make it stand out."

BUILDING MAY'S RAINBOW

The Game of the Name

bit of name dropping this month. Let's start with some happy names from our RAINBOWfest in Palo Alto: Bob Bailey and Bill Johnson.

Bob was the winner of RAINBOW's drawing for the Mitsuba Super Modem 1200 and he's already on Delphi as BOBBAILEY. Bob's the electronics lab supervisor at West Valley College and lives in Hollister, California. He says he "bought one of the very first CoCo 2s, and I've had the top off so often the screws

won't stay in."

Bill Johnson of San Jose won RAINBOW's give-away of a 300 Baud Volksmodem donated by the Delphi booth. Bill became elgible for the drawing by subscribing to RAINBOW and says he plans to take advantage of the free-hour offer to get acquainted with Delphi. Bill, 27, owns a small construction company focusing on "roads, parking lots, building foundations — anything to do with dirt."

So many have made the Delphi connection and joined us on RAINBOW'S CoCo SIG that I've decided to name names. There is something intriguing about Delphi's "usernames," the one-word nicknames you select as your identification when first signing on. Many choose to run together their real name, as do BILLBARDEN, BRIANLANTZ and MARTYGOODMAN. Bob Rosen, on the other hand, is

WHIFFLE and Steve Bjork is 6809ER.

Many usernames sound like C.B. radio "handles," while others sound more like boat names and some like secret agent code words. Some are self-evident selections such as JUSTMARRIED (Mark Waite), MICROTEACHER (Don Bainter) or BUSDRIVER (Felix Pendas), but others are cryptic indeed: DISKBANK (William Borie), ZARATHUSTRA (Jay Browning) and OLDUTCH (George Quellhorst). Many conjure up adventure; TIMERIDER (David Bischof), AQUALUNG (Gary Adams), TRAILBLAZER (Walter Janusz), MOONRAKER (Danny McClain). But you can't get more "down home" than MUDFLAP (Roger D. Bradley) or UGLY (Keith W. Smith). GREENONION (Dave Seallion) had better watch out for YARDMAN (John Gates) or WEEDHOPPER (Joe Houseright), and we'll all give a wide berth to POLECAT (Bill Watkins).

Now, ADOBEPAGODA could be either Becky or Dave Matthews and both Sandy and Charles Allen go by RAILFAN, but the BOSSMAN is strictly Paul W.

O'Reilly and only Donnie Ashley is NUKEBOSS.

Maybe we should consult our COCOSHRINK (Frank Miller) to counsel the MADDUNKER (Nate Grant), BUGMAN (Harold Dowda), BONEHEAD (Brian Frumolt) and RUNAWAY (John Duffy). Sounding more violent are CHICKEN-HAWK (Jim Laffen), HOGWILD (Steve Philip), ZOMBIE (Rod Plant), CHAINSAW (Kevin McCullough), KARATE (Shawn Corcoran) and MAKEMY-DAY (Ed Hartmann). Wonder if HORNTOAD (Larry Herdenbrook) has met BULLFROG (David Stafford)? It would appear that SIXPACK (Charles W. Currier), SUPERPIZZA (Tony Wyland) and BIGCHEEZE (Wilbur E. Kraft) should have a natural affinity, too.

Now, is ELECTROMAGIC (Devin Cook) in the air as FATIMA (David Agopian) dances while FIDDLER (David Souter) plays? And, does FOLKSINGER (Harry Hedges) or JAZZMAN (Raymond Gassaway) have the next act? Ham radio call letters abound as does COCO (you name it). Tim Coldenhoff may be the MASTERMIND, but then Stephen Ritger's a WIZBANG. And, while Duke

Mihajlovic is THEDUKE, Lance Bannerman is a STARCOWBOY, too.

WOODSTOCK (Dave Wood) should feel right at home with SNOOPYDOG (Billy Hambric) or BEAGLE (Tom Heagle), and BILLTHECAT (Lou Case) must be a cousin to CATMAN (Peter Schweitzer), CATLOVER (Clayton Hayes) and CATFISH (Gordon Daniels). From WALLSTREET (Fred E. Simpson) to the WESTCOAST (Cindy Shackleford), THEBIGGUY (Mike Carr) to NEWKID (James McDaniel), OLDGROUCH (Carl Wolf) to HAPPYPUPPY (Steve Araujo), RAMBOI (Albert Veillette) to RAMBOXVII (Brad Bauer), RAINBOW'S CoCo SIG obviously has a MEGABYTE (Mark E. Sunderlin) of the RIGHTSTUFF (Jerry Bradley).

You can get in on all the name dropping, too. Just drop your name in the mail for a RAINBOW subscription and we'll print it 12 times, right on the cover of your favorite magazine! What more could a CoCo lover ask for?

- Jim Reed

Have you yet subscribed to

A monthly magazine on tape and disk

Now every month you can get 8-10 readyto-run utilities, programming tips & hints, business applications, home management, tutorials, and educational programs. Also a Buy 'N Sell section and much, much more, NO GAMES, ONLY REAL STUFF!

> Each issue shipped to you by first-class mail.

Programs written by computer wizards like Kishore M. Santwani and Gary T. Jes.

SUBSCRIBER BENEFITS

- Free advice/help on your Basic and ML programs, whenever possible.
- Free Buy 'N Sell ads on computers and
- 10% off on all Microcom spftware/books
- Subscribers encouraged to submit programs for inclusion. (Contact us.)

EVERY YEAR YOU GET OVER \$1500 WORTH OF SOFTWARE. So Act Now!

DECEMBER 1985

- 40K BASIC (For 64K Cassette Users)
- Super INPUT/LINE INPUT
- Tape-to-Tape Copy (Basic and ML)
- Mailing List (Disk Only; Many Functions)
- Banner Maker (7" Letters/Numbers)
- Single Page LIST/DIR
- Alpha Directory
- Disk Tutorial (Part 1 of 10 part series)
- Spell 'n Win Series 1 (400 words/4

The market value of these programs is OVER \$150, DOUBLE the price of our annual subscription.

THOUSANDS OF PROGRAMMERS USE THESE UTILITIES DAILY. SHOULDN'T YOU?

UTILITY ROUTINES for the TANDY & TRS-80 COLOR COMPUTER (Vol. 1)

This powerful book for Basic and ML Programmers, includes program explanation, memory requirements, and an annotated source listing for the utility routines given below. These routines if bought individually will cost you HUNDREDS OF DOLLARS.

These are 100% Position Independent ML Utilities and require no ML programming knowledge.

COMMAND KEYS: Access most Basic commands with 2 keystrokes.

CURSOR STYLES: Creale OVER 65000 Cursor Styles.

FULL LENGTH ERRORS: Get full length error messages

KEY CLICKER: Ensure key input accuracy. PAUSE CONTROL: Put Basic/most ML programs "on hold."

REPEAT KEY: Repeal ANY key, 5 different key

REVERSE VIDEO (Green and Red); Eliminate eve strain

SPOOLER (16K, 32K, 64K): Don't wait for those printauts, 32K Spooling Bulter in 64K.

SUPER SCROLLER (64K Only): Save and examine everything that scrolls off the text screen. AND MUCH, MUCH MOREI

Compatible with 16K/32K/64K ECB/Cassette and Disk Systems and CoCo I and CoCo II. BOOK \$19.95

THESE ROUTINES (READY-TO-RUN) ON CASSETTE/DISK: \$24:95 BOTH BOOK & CASSETTE/DISK: \$36.95

BEST OF COCO TIME '85

(UTILITIES) 18 best selected utilities from COCO-TIME 1985 like: In Memory Disk Drive for 64K Cassette Users, CoCo Disk Zap, Basic Program Packer, Tape Encryption (Basic) Disk Encryption (Basic), Graphics Screen Dump for DMP Printers, Basic Search, EZ Disk Master, Function Keys, Graphics Zoom, Tape Index System, 40K Basic (for 64K Cassette Users), Alpha Directory, Banner Creator, LIST/DIR Pause, Disk Mailing List, Super INPUT/LINE INPUT, and Tape-to-Tape Copy.

Disk or Cassette,

Only For \$26.95

DISK ANTI-PIRATE \$59.95 HIDE-A-BASIC 1.1 \$24.95 вотн \$79.95

500 POKES, PEEKS, 'N EXECS for the TRS-80 COLOR COMPUTER

NEVER BEFORE has this information of vital significance to a programmer been so readily available to everyone. This book will help you GET UNDERNEATH THE COVER' of the color Computer and develop your own HI-QUALITY programs, SO WHY WAIT?

This book includes POKEs, PEEKs, and EXECs to:

- Auto start our Basic programs
- Disables most Color Basic/ECB/Disk Basic commands
- Disable BREAK KEY, CLEAR KEY and RESET BUTTON.
- Generale a Repeal-Key.
- Merge Iwo Basic programs.
- Transfer Rompaks to Tape (for 64K only).
- Speed up your programs.
 RESET, MOTOR ON/OFF from keyboard.
- Restart your Basic program thru the RESET BUTTON.
- Produce Key Clicks and Error Beeps.
- Recover Basic progams lost by NEW, ?10 ERRORS and faulty RESET.
- Sel 23 dillerent GRAPHIC/SEMIGRAPHIC modes.
- Sel 15 of the most commonly used Baud Rates. Allow you more plays in 23 of your lavorite arcade
- AND MUCH, MUCH MORE!
 COMMANDS COMPATIBLE WITH 16K/32K/64K. COLOR BASIC/ECB/DISK BASIC SYSTEMS and CoCol and CoColl.

The CoCo Galery

Edwin Hathaway

Memorial

Edwin lives in Glendale Heights, Illinois, and used CoCo Max to create a stirring illustration of the Space Shuttle Challenger as we wish to remember it.

The theme of this edition of CoCo Gallery is a tribute to the human spirit. Nowhere is humanity's quest for knowledge more evident than our willingness to take to the sky.

1st)

Logan Ward Challenger

Logan opens our gallery with heartfelt homage to the Space Shuttle Challenger and its brave crew. Logan lives in Memphis, Tennessee, and used CoCo Max for this picture.

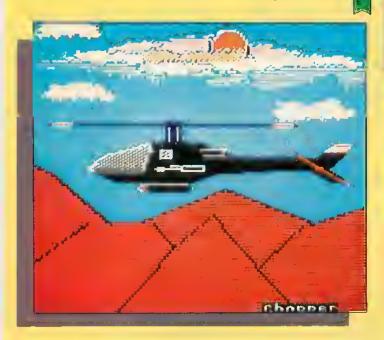

3rd)

Chris Foster Apollo

Chris lives in Texarkana, Texas, and continues our theme of exploration with a historical depiction of one of the Apollo spacecrafts. Chris used a BASIC program he wrote for this work.

Kenneth Hill
Lunascape
This imaginative work by Kenneth Hill
of Severna Park, Maryland, depicts a
scene long striven for, finally reached
and fondly remembered. Kenneth
used X-Pad for this picture.

In the April 1986 issue of THE RAINBOW, two graphics in "The CoCo Gallery" listed as second and third prizes, respectively, have been disqualified as not being original works. Our apologies to Gary Larson, creator of *The Far Side*, and Chronicle Publishing Company which publishes Mr. Larson's *The Far Side* 1986 Off-The-Wall Calendar.

Thomas M. Ales

Star Trek

Our first honorable mention goes to Thomas Ales, who lives in Neenah, Wisconsin. Using BASIC, Thomas created a work taken from popular fiction that must be included in our proud and bold gallery.

Kevin Dorsey

Chopper

Kevin Dorsey lives in Louisville, Kentucky, and rounds out our gallery with a depiction of a sleek military chopper. Kevin used *McPaint* for this work.

SHOWCASE YOUR BEST!

You are invited to nominate original work for inclusion in upcoming showings of "CoCo Gallery." Share your creations with the CoCo Community!

Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also, please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere.

We will award a first prize of \$25, a second prize of \$15 and a third prize of \$10. Honorable mentions will also be given.

Monica Dorth, Curator

Be it ever so humble, we all know there's no place like . . .

Home Sweet Home

By Ruth E. Golias

ince I bought my CoCo, it has become my only hobby. I am particularly intrigued by the PRINT @ statements and their many possibilities. These statements seem among the easiest for the new pro-

Ruth Golias has retired from the Torrance Police Department where she did microfilming. She is learning to program her CoCo and it has become her hobby.

grammer to understand.

This program, Home Sweet Home, uses the PRINT @ statements to build a house. I like the effect, It's rather like an abstract painting.

Just CLOAD Home and run it to see the surprise at the end.

(Any questions regarding this program can be directed to the author at 2826 Pacific Coast Highway, Torrance, CA 90505, phone 213-325-1384. Please enclose an SASE when writing.)

"The CBASIC Compiler"

Now anyone can create fast efficient Machine Language Programs Easily and Quickly without having to use an Editor/Assembler

CBASIC is a fully integrated, nasy to use Basic program Editor and Compiler parkage CBASIC is 99% syntax compatible with Disk Extruded Color Basic programs, so mort Basic programs can be loaded rind compiled by CBASIC with lable or no chauge snaquind. The compiler is an optomizing two partitutings Bindic compiler that not over this programs which in Disk Extruded Color Basic in to 160% pure 6809 Machine Language programs which are written directly to disk be a LOADM compatible format.

The programs general of by the nompiler can be rout as complete round about programs. A built-to link not evidence will automit fieldly selections and or by one copy of each subnoture that is required from the interval run-time bloary and rusest them directly to the program. This aliminates the nord for runbersome, often want full separate "rountime" packager.

CBASIC WAS DESIGNED FOR BOTH BEGINNING & ADVANCED USERS

CBASIC is in Powarful tool for the Baguium on Novica programment as will as the Advantural Bank or Machine Languing programment. The Bagin net or Novina programment is a write and compile program without having to worry ebout Stack. Pointern, DP registern, mitmory illocation, end so or a because CBASIC with in radia if for your rundmarked, thinkey have to do in waits that programment, CBASIC will ket you take norman and synthal for the individual Birth and Birth and Machine Lauguing programment. CBASIC will ket you take norman and and connot every aspect of your program, even ginner ting machine code directly in it program for specialized inontages or fur hours. CBASIC addressly statuser until not poclaticed inoutines or fur hours.

CBASIC add: mery featurer up it found in Color Base, the Intruupi, Roset, end Ou Euro (Irandbug Itriso har addrured programming Irainess that allow merching leaver or until of the Stack and Direct Pagu registers, variable allocation, uniformatic dAK RAM nontrol, program oughe and even multiple origin. It can even have machine language code generated within a program that in secular, just bke ausy other Buse, program line.

FULL COMMAND SUPPORT & SPEED

CBASIC Inturer well our 100 Basic Commands and Functions that Juliy rupport Disk, Tape, Pratter and Scraul / O In also rupports ALL the High and Low Resolution Graphics, Sound, Play and Straig Operations available at Extended Color Basic and allowing 90%, sort as compatibility.

Color Basic, end all with 99.9% synth upmpatibility. CBASIC is FAST. Not usby will CBASIC frompided programs usecute 10 to 1000 jimer farter than Basic, but the jimer it free to develop e CBASIC program versus writing e maritur language program is unself, minth rhorter. A machina language program that might take several months to write and debug rontle be created using CBASIC in a matter of days or hour, even for rivelie experienced machine in riguage programmer. We first report from e CBASIC user that planned "e Birth program that used to take 3 hours from, now runs run? to 8 minutes." Another user reported it program that took 1 to 1½ hours to run in Basic, now runs in 5 to 6 minutes.

MORE THAN JUST A COMPILER

CBASIC has its own completely rulegrated Basic Program Editor. The Editor constituted in CBASIC is used to Cavaturately of Edit programs for the compiler. It is a full fluoritor differ with fluoritor of refigired specifically for writing and editing. Basic programs it has built-in block Mouc and Copy fluoritions with automatic program in neutriburing boulding services, and the program for the program fluority of the program fluority in the set is used for Loading. Saving, Appending fluoriting, exit using sequencial fluority fluorities automatic fire rumber generation for new where are refing programs or inserting sequencial fluorities between existing lines. You have set the pritter for hard copy. The built-in editor maker program councitoris and changes as easy as "falling off e log". If CBASIC find reliation when it may be program to the prince of the prince for hard copy. The built-in editor maker program councitoris and changes as easy as "falling off e log". If CBASIC find reliation when the prince of the prince of the prince in the prince of the prince of the editor what kina you writto relate editing rud whou it is displayed, move the cursor with the arrow key to the pioce where the runor reliad council it durit blace that, if it implies.

HI-RES & 80 COLUMN DISPLAYS

CBASIC is the or ly Color Basic Compilar that includes its own Hi-Resolution 51, 64 or 85 by 24 lin x display. It is also the orly compiler that supports both the PBI "Word-Pak" and the Double Density 80 column trid. All of thase display forms to are part of the stundard CBASIC compiler parkage. Not or by our thirse display formats be insed for upmel program adding and compiling, but CBASIC will also include tham in your compiled program? If you want CBASIC to four fully the display driver in your program, all you have to do is use a single CBASIC command "HiRES". The reur-time display driver that CBASIC includer in your program is not just a simple display, but a full-disturred display package. With the Hi-Resolution dript vipar kage you use max task experies, whenge characters per line, underline, character highlight, erase to end of line or screen, home corsor, home & uleer screen, protest screen lives, end much more. All commands are compabile with our Hi-RES II Screen Commender so you use usefully divelop screen layouts uring Hi-RES and Color Basic before you usomptly your program. The same epplies to using the 80 column card disturs. What other Basic usompiler office with and of flexibity?

64K RAM SUPPORT

CBASIC makes full use of the power and flexibility of the 6883 SAM (Synchronous Address Mnliplexes) to the Color Computur. It will tully outlies the 96K of address space anniable to the Color Computur (64K instelled) during progrem Creation. Editing and Compilation. CBASIC her a spacial command for automatic 64K Anniant When used to a progrem, it allows the user to use the upper 32K of RAM space automatically for neithbes or even program storage at rou-time. It will automatically switch the ROMs in end out whou nucled. There are also two other commands that allow you to courted the ripper 32K of RAM manually, under program unitral. No other Color Besiu compiler dirustly supports the use of 64K RAM like CBASIC.

ALL MACHINE LANGUAGE

CBASIC is unmpletuly written to fast ufficient Machine Language, not Bestic, bits some other Color Basic compiler researed fits, CBASIC centurility and under progression of the Hi-Resolution 51 by 24 flux display, it can work with about a 34K progrem, and thu 80 notium card nersions can hendle almost 40K of progrem, and thu 80 notium card nersions can hendle almost 40K of progrems. OBASIC compiles progrem with bighting last spend. If will normalise a 24K progrem to disk to less then 2 microtion. Their without a fixtup being generated. We've hered riones about some other compilers that take almost 10 microtion for institution of the compiler exhibits.

THE FINISHED PRODUCT

Since CBASIC contributer for improve to support ALL of the f/O devices (Disk, Tape, Square & Pinter). Hi-Rar Graphice, Sound, and Enhanced Screen displays, it is well ruited for a wide renge of progremming explainance. It governates a complete, Ready to Run maniful language progrem. The furthed product or progrem does not have to be interfaced to a Basic progrem to perform some of influence or commander. This may seam obtained to you, but some of the other Color Basic prompter don't recessably work this way. Some of theb compiler commands used a separate Basic progrem to order for them to work. It some cases, in quiru that a separate Basic program be inflated to the compiled progrem to perform f/O fur nour, bis (INPLT, PRINT and so on, CBASIC deems' do this. ALL of its commands are compiled unto a sergle machine language progrem that does not require our kind of Basic program to make it work.

COMPATIBILITY

You may be would rung it bout those italierments we made untilier concurring 99% or 99.9% syntax compatibility. What does that other 1% no sixt of? The biggrift part of that 1% has to do with strong arrays and in riables. CBASIC doer upout see a "Sturg Pool" like Color Banc. It uses absolute mamory addresses to locate riving variables and arrays. This is why CBASICs string processing is so last, it also climitates the time coustiniting "Gerbage Collection" problem. While CBASIC allocater space for strings, it must know how rough ripace to use for early trong. What you Dimausiou eight variable to CBASIC, you must fill it how much ripace yor want to saus for ush ademic if. CBASIC will automate all yallocate 32 byter for it. If you want a single-string to have unough room for 200 characters you would DIM AX\$(20). For string a usgri, you would still rooms this further you went, the same at Color Basic, to guisting #30 from the rusy CBAS, you would still rooms this further you went, the same at Color Basic, to guisting #30 from the rusy CBAS, you would still rooms from the rusy CBAS, you would still rooms from the rusy CBAS, you would still rooms the profession of the

CBASIC REQUIREMENTS

CBASIC ir quare e mir imum of 328 RAM eric at kest one Disk duva. Wir itbougky recommund that you have 64K CBASIC is compabble with all versious of Color & Extandud Basis and both Disk Basis VI Q and VI 1. Programs compiled on uither systems will run un systems with different ROMs. CBASIC is NOT campabble with JOOS.

DOCUMENTATION

The Door menteriou provided with eny program is usey important to the neer. This is unperially be unwhan you talk about a program is complete and complex as CBASIC. Even though CBASIC was designed to be the most User Fucually comprise on the market, we went to great lengths to provide a minutal that is not only arry to use and understand, but compreher sind and complete anongh for rurn the most sophistic ated here. The manual intributed with CBASIC consists of approximation of the state of the program of real information, not like some manuals that put just one or two short paragraphs on upage. If we did it that wey, we noted have userily arrated a three or four hundred page manual. The manual and its breaks down rark section of the manual end gives a 3 or 4 word description of each section and its literate long with page numbers. The natural has three sections, the Ednar, Compiler and Appendix. Each of these is divided into subsections, with Section and Stribser nou titles pruit die the kep of each page. If you want to, you could find the information you era looking for by simply Ripping through the pages and scar ulugithu Seatoou titles on the reports we have had from CBASIC users describe the manual as bong the Brit program minural they here our used.

COMPARE THE DIFFERENCE

CBASIC is not just enother Color Barin Compiler. It is thu oully nomplate Barin Compiler Syrium for the Color Computer Compare CBASIC? Ideatures to what other nompiler refirm and you'll see the difference. When comparing CBASIC to other nompilers, you uright what he brup some of these quantour in mout Does of ruppent I/O functions? You near it waste much of a program without PRINT, INPUT and so ou. What about nomplex thing state masts, or remaining statements exist! How large of a program ran you with ? Cen you compile a complex star give. MIDSRIGHT3(DAS(VAL(RNS), LEN(LES), 3.3)? Can you use two charautic usariable unemer for string & numeriu uanables, Illiu Basic. Does it support all the Mi-Res graphics stakement inclinding PLAY. DRAW, GET and PUT, using the same syntax as Basic? Do you num here to use a seperate Berliu program? Can you take completu Berliu program e duompile them without uxeusiuu nhanges? Will thuy work? How do you edit a program when it her nuori numphing?

PRICE VERSUS PERFORMANCE

Thu pace of CBASIC is \$149.00 it is thu most expensive Color Basin Compiler on thu market, and well worth the invertiment. We spent over 2 years writing end relining CBASIC, to meke it the Best, most Compatible Color Basin compiler exalable. Most of our CBASIC users elseady bought one or more of the other compilers on the merket end have stone discreted them. We evan nature at one of those tradical to, et a good price. Before you buy a compiler, compare the performance of CBASIC against eur Color Basic compiler. Dollar for Doller, CBASIC giver you more then env of the Color Batic compiler available.

ORDERING INFORMATION

To order CBASIC by mail, send check or mouny order in the amount of \$149.00 plus \$3.00 for shipping and handling to the address listed below.

To ordur by VISA, MASTERCARD or COD, call ur et: (702) 452-0632 [Moudey thru Saturdey, Bam to 5pm PST]

DATA PACK II

NEW

TAPE \$34.95

MANUAL WALLES 28-64×24 Hi-Resolution Display **一种大学工作工作工作** WHITE HUKE 64K Suppek UP TO SEK Text Buffer

TERMINAL COMMUNICATIONS SOFTWARE Also Supports The PBJ 80 Column "Word Pak", Deluxe RS-232 Pak, Parallel Printer Card and PBJ 2SP Pak

"FEATURES"

- No Lost Information When Using Hi-Resolution Dirplay On Line
- ASCII Compatible File Format
- Full Text Suffering Terminal Sund Rates 300 to 9600
- Automatic Word Wraji Eliminates Split Words Full/Hall Duolex

- Automatin Fig. Ca. lure
 Programmable Word Length, Parity and Stop Bits
 Save and Load Text Buffer and Program Key Buffers to Tape or Disk
- Hi-Resolution Display Formats, 28 to 255 x 24
- True Upper/lower Case Display
- Kill Graphics Option for an Extra 6K Supports Line Break

- Freeze Display and Review Information On Line Send Files Directly hom Buffer or Dirk Full Disk Support Int Oisk Verthen Send Control Codes Funk Keyhoard Send Control Codes Funk Keyhoard Separate Printer Band Rules 110-9600

- Display on Screen or Output Contentr of Buller in Printer

- Automatic Mento Sense 16-64X 9 Programmable Function Key Variable Length Macro Buffer Programmable Prompt Character or Delay to Send Next Line
- Programmable Control Character of Delay to: Programmable Control Character Trapping Programmable Open/Close Butter Characters Automatic Key Repeal For Editing Program and Memory Status Displays

"The Source" has arrived!

The Source brings the cost of Disassembler and Assembler Source code generation down to Earth.

Now you can Disassemble Color Computer machine language programs and generate beautiful, Assembler Source Code for a fraction of the cost of other Disassembler/Source Generalor programs.

The Source has all the features and functions you are tooking for in a Disassembler.

- Automatic label generation.
 Allows specifying FCB, FCC and FDB areas.
- Disassembles programs directly from Oisk.
- Supports multiple origin disk files.
- Output complete Disassembled listing with labels to the Printer, Screen or both.
- Generates Assembler compatible source files directly to disk.
- Generated source files are in standard ASCII formal that can be edited by most word processors.
- Built in Hex/Ascil dump/display to help locate FCB. FCC and FDB areas in a program.
 Fast Otsassembly mode for testing & checking FCB, FCC and FDB mapped areas.
- Built In Disk Directory and Kill file commands.
- Memi display with single key commands for smooth. Easy, almost foolbroof operation.

Starship Falcon **Graphics Adventure Game**

Six months ago a terrorist group demanded to be designated the rulers of Alpha Sigma III, under the threat of world starvation on the planet Earth. The Federation denied their demands, so they released a biological weapon which has destroyed all known edible plant species from throughout the known galaxy. To date no plant life has been able to survive on Earth. Recently, Federation undercover agents have reported a story told by a roving space trader, of a planet with abundant edible plant life. These plants have a reputation of being able to survive in all climates and in fact, are supposed to grow at an incredible rate. The Federation is desperate! If Earth's food source is not replaced soon, the Federation will have to evacuate all animal and Human life. Your mission is to go to the planet Zephyr and obtain the seed of these plants and return to Earth. Several Federation agents have been sent to obtain the seeds and none has returned! Can you get the seed and survive??? GOOD LUCK!

COLOR CHARACTER GENERATOR A NEW DIMENSION IN COLOR COMPUTING

- New includes a character generator and sample graphic space. Full 224 text and graphic characters. Underline in all PMODES. Prints vertically.
- All machine language, user transparent. Supports all BASIC. EXTENDED BASIC and DISk commands.
- Automatic loader recognizes this 32h & 64h computers.
- Mix up to 5 charactes sizes in 4 colors ellion one screen. A total of 10 sizes evallable from 8+4 to 42+24 or 32+32 in verticel mode.
- *Use up to 4 defineable window screens of any size. Also includes horizontally scholling (crewling) one line screens.
- includes positive & negative screen dumps in 2 sizes for R/S. Epson & Gemini printers, (Please specify)
- Special Trace Delay can be used to debug programs one line et a time (even graphics %
- · A special printer control can output characters to the screen & printer simultaneously...
- A must for all color compuler owners. Once you try it you won't write another program without it.

MIDI-ize Your CoCo With COLORCHESTRA

Ail of those marvelous, musical sounds you've been dreaming about can come to life through your Tandy Color Computer, MIDI equipped keyboard synthesizer and the COLORCHESTRA system package.

With COLORCHESTRA, you can create masterpieces of music, overlaying up to 8 tracks of synthesizer sound.

Once you've keyed or played your composition into the Color Computer, you can edit each individual note; and, after you're satisfied with what you've got, there's quantizing to clean up timing errors.

COLORCHESTRA works with you to record music in real time and adds the features of mixing or transposing tracks; and, with 8,000 note storage capability, you have enough power to produce the most demanding music compositions.

The COLORCHESTRA software (from the author of CoCo MIDI), is simple to use incorporating menus and graphic icons and can be cassette driven or called up

on disk with your 64k Color Computer,

As for the hardware, it was carefully designed to be something special. Each cartridge is fabricated in genuine wainut and hand finished. The boards are 7 mil gold plated, (not just the edge connector-the ENTIRE board) for optimum interface connection. Because each piece resembles a fine musical instrument, it is serially numbered on the case for your collection.

Although COLORCHESTRA incorporates outstanding professional features found in other MIDi systems, it's priced just right.

At \$149,95, you can MIDI-ize your 64kCoCo.

The complete package includes hardware, sequencing software, ring bound quality documentation and two MIDI cables.

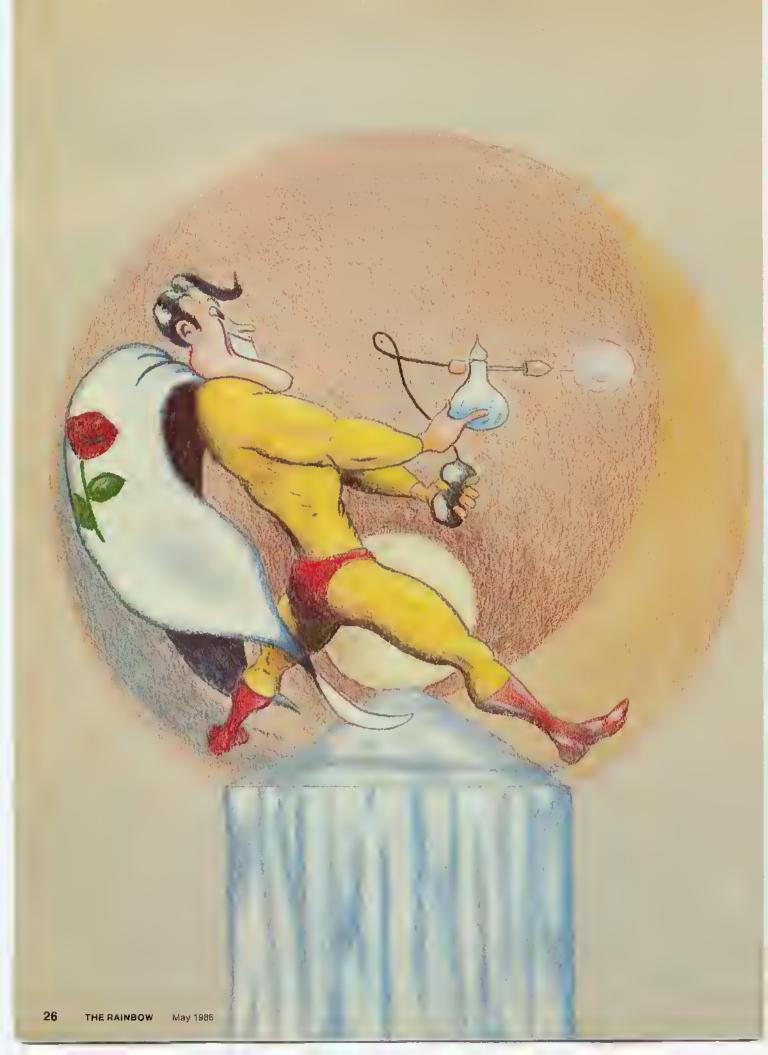

So now all of those fantastic music sounds you've been hearing in your head can be produced for the whole world to hear.

COLORCHESTRA system complete \$149,95. Call any day (ex. Sun.) to order. We ship same day. We accept cash, check, COD, Visa, Master Charge, Shipping add 3.00, COD add 2.00. Louisiana residents add 7,8 sales tax,

Call for latest pricing on synthestzers, y cables, extra MIDI cables. Software programmers - please write for author package, COLORCHESTRA Copyright 1985 CW Lanusse III

It's a dirty job, but somebody's gotta do it!

Get Down and Dirty in New York's Sewers with Super Rooter

By Mark Nelson

nce a year, a major cleaning is necessary in the New York City sewers. This year a special sewer cleaning device called the Super Rooter has been designed and built to make cleaning the sewers faster and more economical. However, there are some critics of the project on the city council. The Rooter is very expensive to operate, so if a strict time schedule is not met, the city will be out several thousand dollars. Your job as pilot of the Rooter is to clean the sewer within the time limit set by the city council.

Once inside the sewer, you notice white globs of waste that have formed and are hanging from the ceiling. You drive the Rooter over them and hear the "gulp" as the waste is literally sucked into the Rooter and out of the sewer. Some of the waste has fallen from the ceiling, however, and is floating around the sewer. Be careful not to let this floating waste run into the side of the Rooter or it will be damaged. It must also be sucked up by running over it. Once all the hanging globs are cleaned off the ceiling, a trap door is opened to allow travel deeper into the sewer to meet increasingly difficult janitorial duties.

Use the right joystick to move the Rooter through the sewer

Mark Nelson is a computer science student at Brigham Young University and author of the Second RAINBOW Adventure Contest winner, Head of the Beast.

27

drain pipes. To back up, press and hold the red firebutton.

You receive 10 points each for sucking up hanging globs of waste and additional bonus points for completing each drain. Extra time (one to five seconds) is awarded for sucking up floating waste.

Super Rooter is a machine language program "hidden" in BAStC DATA statements. The two listings, Part1 and Part2, create the machine language

program in memory. The listings are very long and tedious to type in, so you may want to fill out the order form for RAINBOW ON TAPE right now. If you choose to type the listings in, be very careful and save them before running. Do not run either listing before saving both. CLOAD and run Part1. After it has finished, you may CLDAD and run Part2. Once you have done this, save the machine language program to either tape or disk, It is a simple procedure and

may be accomplished in the following manner. On a cassette based system, type: CSAVEM~RTR~,&H5A51,&H75FE, &H6000. On a disk-based system, type: SAVEM"RTR", &H5A51, &H75FE, &H6000.

After the ML routine has been saved, turn your CoCo off, wait for 15 seconds and turn it back on. Now LDADM or CLDADM "RTR" and type EXEC.

I'll be watching RAINBOW "Scoreboard" to see who's really cleaning up! Good Luck!

A graphics screen dump utility for the CGP-220 Ink Jel Printer Facilities include Fast machine language, tau-color and ane-colar versions, special CoCa Max version, user-selectable colors, legular ai daubte-size printaut, 16K.

Tape \$14.95 Disk \$17.95

The Andrea CoCo

By Art Martin

Another great animated graphics adventure! All you came down to the Yacht Club for was to get a atrik and maybe play a little poker. Heck, nobbay would ever guess that the classet thing you owned to a realyacht was the one over your tireptace. It was in the bar that you heard rumats at earth-shattering events about to take place. You step out onto the wharf and of tittle air when your natural curiosity and sense at adventure start to work. Can you save the world? Superb graphics, save & load teature 64K, and disk arive required.

Disk \$24.95 Pumpman

Yau'it dig this 100% ML arcade game! the Pumpman cairies a pump that he tires at diens Pooky and Dragon as they change tarms and chase nim arauna underground 15 artiterent

around underground 15 aitherent screens, "pause game," feature, banuses. Astun and challenging as the bafund arounded game? 32K, one joy-standard game?

Tape \$21.95 Disk \$24.95

New Dual Mode EPSON

The new Epson LX-80 offers printing llexibility in two modes: one mode allows you to printing inextility in wo modes: one mode allows you to printing and (100 cps) dol-matrix style for programming and graphics, and the Near Letter Quality mode (16 cps) produces precise (240 dols per inch), beautiful type for correspondence, reports, and similar purposes. The LX-80 offers 160 different Type-style combinations, including Pica, Elile, Enlarged, Emphasized, Condensed, Subscripts and Superscripts, and type-styles can be selected quickly from the top control panel or from program control. Comes standard in Iriction feed; tractor option is also available.

LX-P package includes an LX-80, a serial interlace, a Color Computer to Epson cable, and Printer Tutorial that teaches you how to program the different type styles (\$29.95 value).

LX-P: LX-80 package \$317 (\$7 shpq) ET-1 tractor option for LX-80, \$29.50.

SF-1 Single-sheet feeder for the LX-80, \$145 (\$7 shpq)

Epson	RX-80 FT	repack	\$207.
Epson	LX-B0 New		\$249.
Botek		allel converter	\$68.45
Howard	CoCo to Ep	son cable	\$25.

MONITORS

123 Zenith 12" Green Screen, 640 dols x 200 dols resolution, 15 MHz band width. \$114 (\$7 shpg)

123A Zenlih 12" Green Screen Speciel, \$67,50 80 Column non glare (\$7 shpg)

122 Zenith 12" Amber Screen, 640 dols x 200 dols resolution, 15 MHz band width. \$117 (7 shpg)

131 Zenlih 13" Color Monitor with speaker, composite & RGB jack, 240 dols x 200 dols resolution, 2.5 MHz band width, \$168 (\$14 shpg) *CLOSEOUT 40 Column

141 Roland 13" Color Monllor with speaker, 270 dols x 200 dols resolution, 4MHz band width \$247 (\$12 shpg)

All monitors require video controller. Reverse video liee with monitor order.

MEMORY

64K Upgrades—1 Year Warranty

64-E1 for E Boerds with complete instructions, Remove old chips and replace with preassembled package—no soldering or trace culs. \$28.45 (\$2

64-F1 for F Boards. No soldering needed. Capacitor leads must be cut. \$24.45 (\$2 shpg)
64-2 tor COCO 2. Kil requires one solder point, no

Irace culs. \$24,45 (\$2 shpg)

CONTROLLERS

New Controller trom J&M: Has switch that allows either JDOS or RS DOS to be the disk operating system; eliminales software compatibility problems, while preserving the advantages of J&M's gold conlacts and data separator. Also added to the DC-2 is a parallel port, which means a serial interface is no longer needed to make a parallel printer (like the Epson) work.

DC-2 Disk Controller with JDOS, \$128 (\$2 shpg)

RS-1: RS DOS ROM Chip. \$20.00 (\$2 shpg) DC-1 Disk Controller reads and writes to 35 and 40 Hack single and double-sided drives for all models of the Color Computer w/ JDOS. \$128 (\$2 shpg)

VC-1 Video Interface mounts inside Color Computer by piggy-backing IC on top of interface—no soldering, no trace cuts. All models give composite video

& sound. \$24.45 (\$2 shpg)
VC-2 for COCO 2—mono only. \$26.45 (\$2 shpg)
VC-3 for COCO 2—both color or monochrome \$39.45 (\$2 shpg)

VC-4 for new Color Computer (no sockets, chips are soldered to mother board). Allaches with springloaded clips. Color or mono. \$39.45 (\$2 shpg)

Epson Homewriter HM1 has serial pick interface and cable included, 100 CPS, bidirectional dot matrix impact for regular paper and one copy.

\$258 (\$7 shipping)

HOWARD QUALITY STANDS

New TS-1X Monilor Stand: Desloner-beautiful sland with clear corner posis, easy side access to ROM port, re sel and on/off bullons \$39.50 (\$3 shpq)

TS-1: Standard 13" monitor stand for the original Color. Computer, Specify black, ivory or clear, 15" x 11" x 4". \$29.50 (\$3 shpg)

TS-2: Same as above for the COCO 2, \$29.50 (\$3

PS-1X Printer Stand features new noise-suppressing foam lop and cork base. 15" ×11" ×21/2". \$24,95 (\$3

EPSON AND J&M

The EJ-P Package

The Epson LX-80 Printer leamed with our new J&M DC-2 Controller gives you top printing capabilities plus bullt-in switch gives JDOS or Radio Shack DOS so all software can run on your Color Computer, Package includes: Epson LX-80 Printer with ET-1 fractor; DC-2 controller; parallel Color Computers to J&M cable; Epson Pilntei Tutorial (\$29.95 value).

Complete EJ-P package \$425.00 (\$7 shpq)

GUARANTEE

Howard Medical's 30 day guarantee is meant to eliminate the uncertainty of dealing with a company through the mail. Once you receive our hardware, try if out; test it for compatability. It you're not happy with it for any reason, return it in 30 days and we'll give you your money back-no questions Hours: 8:00-4:00 Mon.-Frl, asked.

10:00-3:00 Sat

he Biggest

The Best

The Indispensa

It's called the *premier Color Computer magazine* for good reason. **THE RAINBOW** is the biggest, best, brightest and most comprehensive publication a happy CoCo ever had! Is there any wonder we get letters daily praising THE RAINBOW, the magazine one reader calls "A Pot Of Gold" for his Color Computer.

THE RAINBOW features more programs, more information and more in-depth treatment of the Tandy Color Computer than any other source.

A monthly issue contains up to 300 pages and as many as two dozen programs, 15 regular columns and more than 20 product reviews. And advertisements: THE RAINBOW is known as the medium for advertisers - which means every month it has a wealth of information unavailable anywhere else about new products! Hundreds of programs are advertised in its pages each month.

But what makes THE RAINBOW is its people. People like Fred Scerbo, who write special programs at the request of readers. Experts like Dick White and Joseph Kolar, two of the most knowledgeable writers on BASIC. Communicators like R. Wayne Day, who stay abreast of telecommunications advances. Or, Dan Downard, RAINBOW technical editor, who answers our readers' toughest questions. Educators like Dr. Michael Plog and Steve Blyn, who show how CoCo can be used at home or school. Advanced programmers like Dale Puckett, who guide you through the sophisticated OS-9 operating system. Electronics experts like Tony DiStefano, who explain the "insides" of the CoCo. These people, and many others, visit you monthly through columns available only in THE RAINBOW.

Every single issue of THE RAINBOW covers the wide spectrum of interests in the Tandy Color Computer - from beginners' tutorials and arcade games to telecommunications and business and finance programs. Helpful utilities and do-ityourself hardware projects make It easy and fun to expand your CoCo's capabilities. And, monthly reviews by independent reader reviewers take the guesswork out of buying new software and hardware products.

Join the tens of thousands who have found THE RAINBOW to be an absolute necessity for their CoCo. With all this going for it, is it surprising that more than 90 percent of THE RAINBOW subscribers renew their subscriptions?

We're willing to bet that, a year from now, you'll be doing the same. For more information call (502) 228-4492.

Each month all the lengthy programs (over 20 lines) in THE RAINBOW can come to you ready-to-run, thanks to RAINBOW ON TAPE. At \$80° per year — or \$10 a tape ** — it is the biggest bargain going, (Note: RAINBOW ON TAPE will not run on Dragon or MC-10 computers.) Back issues are available beginning with April 1982 (except May 1983), Each month's tape will arrive at approximately the same time as that month's Issue of THE RAINBOW. Tired of spending all your valuable computer time typing in those long, but wonderful AINBOW programs each month? Now there is RAINBOW ON TAPE to help ease the pain. RAINBOW

What goes well with the Rainbow?

Rainbow On Tape!

We call it the other side of **THE RAINBOW** and we may have to raise the price just to call your attention to it. With as many as two dozen programs every month, **RAINBOW**ON TAPE is a luxury service at a bargain basement price.

ON TAPE is a luxury service at a bargain basement price. What is it? RAINBOW ON TAPE is a monthly cassette tape adjunct to THE RAINBOW and it's brimming with all the programs (those over 20 lines long) that fill the pages of the magazine. All you do is pop the cassette in your tape recorder and they're ready to run. No more lost weekends — or week nights — typing, typing, typing. With RAINBOW ON TAPE, you can read the article in the magazine then, in seconds, you load it up and run it. Yes, you could type them in yourself, as many people do. But all of them? Every month? There simply isn't enough time.

month? There simply isn't enough time.
Isn't it time your CoCo became a full-time computer instead of a typewriter? Think how your software library will grow. With your first year's subscription, you'll get almost 250 new programs: games, utilities, business programs, home applications — the full spectrum of THE RAINBOW'S offerings without the specter of keying in page after page and then debugging.

RAINBOW ON TAPE—the "meat" of THE RAINBOW at a price that's "small potatoes." Food for thought. To get your first heaping helping, just fill out and return the attached reply card. No postage necessary.

Discover the other side of THE RAINBOW. It's not only a time-saver, it's the key to a whole new outlook!

64K EXT. BASIC 12895

Color Computer II

Monitor Interface for any Color Computer 29.95 plus 7.50 installation. (color, green & amber compatible)

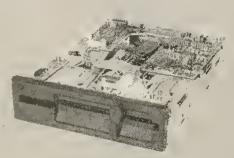

AMBER MONITOR 6495

Epson's Comrex 5650 has a 12" screen with 900 lines. Resolution for 80 column text and 18 MHZ band width. Retail price is 139.95. These are new, in factory sealed cartons, NOT used, repacked, or refurbished. Add 7.00 s/h.

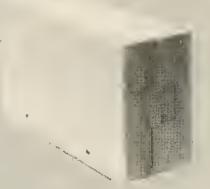

2 Drives 29995

Both our drive 0 and 1 in one case, with cable and R.S. controller. The best just got better!

Drive I Upgrade 11995

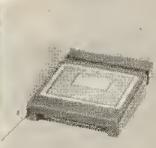

Add a second ½ height drive to your Radio Shack 26-3129. Comes with 3 minute installation instructions, screwdriver required.

Drive 1 12595

Your Choice Silver or White

19995 Drive 0

SUPER DRIVE SALE

Special prices on new first quality disk drives. They even have GOLD connectors on the back... Some other places charge 229.00 for dr. 1 and 299.00 for dr. 0, not us! Drive 1 is for mod I, Second Color Computer drive, or external mod III, IV. Drive 1 just plugs into the extra connector on your Drive 0 cable. Both drives are compatible with any version of the Color Computer and all versions of drives. Drive 0 is your first Color Computer drive and comes complete with cable, manual, and R.S. controller. For double-sided, add 45.00 (only for those who have DS-DOS, boards and knowledge) Bare full hgt SSDD drive only 79.95.

THE COMPUTER CENTER

901-761-4565, 5512 Poplar, Memphis, TN 38119

Add \$4.90 for shipping and handling—Visa, MC & money orders accepted Allow an additional 2 weeks for personal checks—Drive faceplates may vary slightly Prices subject to change without notice.

Bulletin Board Standouts are Easy with Message Maker

essage Maker is a 16K BASIC program and requires the use of the CGP-115 printer.

Unlike other printers, the CGP-115 has a programmable control code that allows it to draw, change colors and rotate the direction of print. This makes it a pretty remarkable machine.

I used several of these options in this program so that the finished output attracts attention on the most crowded of bulletin boards.

The title page and menu are together on one screen that provides three options. Option one is the editor to enter your message. Although the printer writes 40 characters per line, only 32 character lines can be used because of the framing. To change the input from five lines to seven, change the '5' in lines 55, 100 and 200 to a '7' and add the following line:

197 PRINT#-2, CHR\$(11);:PRINT #-2, CHR\$(11);

After entering the message, option two displays it so you can check for mistakes or rearrangement of words.

The last option, number three, does all the work. After entering the required number of copies (a maximum of six is used because the pens may run out), the program prompts for the tear-off section. This can be deleted if you just want to post a bulletin and do not need your telephone number listed.

Finally, separate the messages and, if you opt for the tear-offs, use a pair of scissors to make the cuts between the numbers.

If you have any questions regarding this program, I can be reached at R.R. #3, Stirling, Ontario K0K 3E0 and will be happy to help you if I can.

James Dean has been programming for four years on his CoCo and has a degree in BASIC programming. His goal is to understand machine language some day. James lives in Stirling, Ontario.

At Last — INTERCOMP SOUND presents: PROFESSIONAL MIDI PRODUCTS FOR THE COLOR COMPUTERII

At InterComp our objective is to support Midi hardware/software for the Color Computer to the fullest. Within the next year or so you can expect a variety of products such as ilbrarian/patch programs (Krog, Yamaha, Casio, etc...), graphics editor and system exclusive software. Don't go out and buy another computer tor your MIDI system!!!! Our products are designed with the professional in mind, be it for studio, performance, home recording or music education. Here is the start of more to come!

COLOR MIDI CONNECTION — This interface plugs into the carifridge slot. It contains 3 Midi outputs, 1 Midi input, and a female connector for the disk controller (no Y-cable is required) \$98.00.

SYNTRAX 1.00 — With this sequencer you will quickly control your Midi system! Major features Include: 16 polyphonic tracks, interactive editor, 30,000 bytes for note storage, independent repeats for any track, all midi channel control data (program changes, channel #, velocity, pitch wheel, etc.), int/ext sync for Midi drum machines (or another sequencer), programmable tempo, transposition, cletts, key signatures, chords, complex rhyllms, use up to 4 disk drives, sequence chaining and linking, notes/Midi-events can be specified with a resolution of 1/384 note! Requires 64K, disk drive, COLOR MIDI CONNECTION — \$75.00.

SNYTRAX 2.00 — All the features of SYNTRAX 1.00 plus: real/step lime record (notes, velocity, program changes, and controllers), Input filtering, programmable spllt points, punch in/out anywhere, easy and quick editing of Midi data, supports J&R's 512K upgrade for a tremendous amount of storage for recording! \$125.00 (Customers that already have SYNTRAX 1.00 can upgrade to ver. 2.00 for \$50)

ROLAND TR707 Palch/Librarian . . . \$45 KORG EX800 Patch/Librarian \$45

Include \$3 for shipping (CODs add \$2). Residents of N.Y. state add sales Iax. Mail check or money order to:

Design your own crossword puzzles . . .

Acrostics Go High Tech with Word+

By Rolla Price

aking words on a crossword grid, saving the words and grid on tape, and loading words and grid for display are the objectives of Word+.

First, carefully type the program listing and save it on tape. Run the program watching the logo WORD WORD display vertically and horizontally to form a cross. That's correct, this program (with considerable aid from its user) makes a crossword puzzle! An excellent learning practice for Word+ is to copy a crossword puzzle from a newspaper, magazine, etc.

With a crossword puzzle to follow (see Figure 1), press 'M' to make words. The crossword grid consists of rows and columns of boxes. Count the total number of rows and enter the correct amount to answer ROWS. . . . (1-15)? Do the same for COLUMNS . . . (1-15)? The maximum size is 15 by 15. When finished, the screen displays a graphics of the grid.

It is in graphics mode and the control of input is with the cursor in the upper

left corner. Press "?' for help. Move the cursor with the arrow keys and space bar. Tap the appropriate arrow key to move once, or hold down for continuous movement. The space bar moves the cursor one box to the right. Print the words in the boxes. If you need to paint a box black, use '+'. An incorrect input can be corrected using CLEAR to erase the box. Don't be alarmed when the cursor wraps around from right to left — this is an aid in the word making mode.

To number the boxes, move the cursor to the upper left corner and press '#'. The cursor flashes through the grid letter by letter. Pressing SHIFT-CLEAR clears the words. Pressing '&' changes the program mode back to 'M' (making) and pressing '#' reveals all the letters that have been entered. This is handy if an incomplete puzzle is saved.

Do you have the boxes numbered? It's now time to enter the across and down questions. Place the cursor in the correct box for the one across question and press SHIFT 'A'. The normal multicolored input cursor flashes, waiting for the question. Follow the same procedure for down questions, but press SHIFT 'D'.

Output to cassette is accomplished by pressing the '(' (open parenthesis). Before doing this, test the puzzle by

pressing SHIFT-CLEAR. The words should clear. To play, move the cursor to one across and press SHIFT 'D' to produce the question. Note the timer and score in the upper right corner. This is the time used in solving the puzzle and the number to the left of score is the maximum score for this puzzle. Each correct letter scores one point and prints. Each incorrect letter scores one with no print and the use of '@' to show an unknown letter scores zero. After viewing a question, the space bar moves the cursor in the question's direction (across or down) for convenience during input.

Any mistakes in making or copying the puzzle are corrected in the 'M' making mode. You can change modes by pressing '&', then pressing '&' again to return to the 'L' load mode. Try this a few times; it is a little tricky. Test the mode change by viewing the screen (stopping at END PRDGRAM - [=]) in the 'L' mode. This is the method to edit mistyped words or questions. For example, for a mistyped word in question one, change back to input mode 'M', reenter the question, then return to the output mode 'L' and check if the output is correct.

There are two more keys to use. Pressing '=' to end program displays the final time and score. The other key, 'l',

Rolla Price, a computer instructor and programmer who teaches BASIC on any system, but programs specifically on the CoCo, lives in Sulphur Springs, Missouri.

for start over, totally erases (be careful!) the crossword and returns to the opening menu.

The best crossword puzzles have symmetry. A symmetrical crossword balances the black boxes; every down box has an up box and every left box has a right box. Word+ follows this rule: If there is no box or a black box to the left of a box, this is the beginning of an across word, or if there is a black box or no box above this box, it is the beginning of a down word. So, follow the symmetry, use that creativity and

have fun with Word+.

(You may direct any questions about this program to the author at P.O. Box 36, Sulphur Springs, MO 63083, phone 314-464-2021. Please enclose an SASE when writing.)

Figure 1

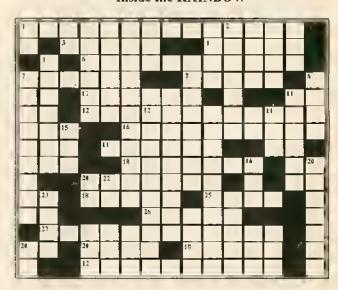

Across

- 1. Creator of CoCo Cat
- Her first name is pronounced "Utah"
- 4. The Delphi username of "KISSable OS-9's" author
- Jutta Kapthammer enjoys receiving These
- Greek oracle or telecommunications network
- 8. Deep in the heart of Texas
- 10. Wishing RAINBOW readers' well
- 12. Database maneger of Delphi's CoCo SIG
- He and his son appeared on the
 1985 Simulation Issue cover
- Most hackers want more for their CoCo
- 18. A gentle landing on pillows
- 21. RAINBOW's construction man al work
- 24. Beginners' "drill instructor"
- This Ph.D. keeps an eagle's eye on education trends
- 26, She hosts RAINBOW's art show
- 27. RAINBOWMAG's SIGop on Delphi's CoCo SIG
- 29. His programs promote the leerning process
- He makes easy access of applying programs
- 31. Founder of THE RAINBOW

Down

- Our newest RAINBOW staff editor's first name
- 2. Roy G. Biv and a pot of gold
- 5, Readers' guide to new products
- 7. Hardware is his forte
- Angela Kapfhammer appeared in the 1985 Holiday Issue wrapping a present in this pharmacy
- 11. He's a real buffer stuffer
- 13. She "toasled" the 1986 Ulfillies Issue
- Don't try an Adventure without drawing one
- 15. RAINBOW's sister publication
- 19. Binary is base _
- 20. The language most easily understood by compulers
- 22. Everyone hates this errorl
- 23. Its best friend is THE BAINBOW
- Error message indicating no more room

Inside the RAINBOW

The Crossword Creator Contest

The above is not a symmetrical erossword puzzle, but ean you guess the correct answers? Or, would you like an even greater challenge? Can you design a different symmetrical crossword puzzle with the *Word+* program and the specifications outlined in the article? If so, you may wish to enter the Crossword Creator Contest. And, if you are chosen a winner you will be awarded a prize and your puzzle will be published in RAINBOW! For more details, see Page 250 of this issue.

Editor's Note: The following program produces no printer output. However, for your enjoyment, we have created the crossword grid shown above with *Word+* and a screen dump program.

Next to your computer,

nothing beats a Tandy printer.

Tandy printers make fine print quality, graphics and high performance affordable.

For your best value and selection in top quality printers, shop your local Radio Shack Computer Center. We've got what you need, whatever your printing requirements.

Dot-matrix power for business

The DMP 2200 (26-1279, \$1695.00) gives you efficient, fast printing at 380 characters per second. It supports elongated, double high, bold, underline, super/subscripts, italics and double strike, plus bit-image graphics. It also has a built in tractor for perfect paper alignment.

Versatile business printer

The DMP 430 (26-1277, \$899) is a 132-column dot-matrix printer with an 18-wire print head that delivers superior correspondence characters in a single pass. Choose from micro, italic

and double-high fonts, as well as bitimage graphics. In the draft mode, the DMP 430 delivers a fast 180 characters per second.

Low-cost, triple-mode personal printer

The DMP 130 (26-1280, \$349.95) lets you choose from word processing, data processing and dot-addressable graphics. Prints in four character styles: standard or italic cursive, in draft or correspondence modes.

Save time while printing

With a PTC 64 Printer Controller (26-1269, \$249.95), you can print one job while working on another. The "print buffer" accepts and stores information from your computer.

Radio Shack has the best

... of everything.

Accessories can make the difference between just a computer and an *efficient* computer system. That's why Radio Shack offers a wide selection of accessories that make the most of your computer.

Save valuable space with our Deluxe Printer Platform (A, \$49.95). It elevates your wide-hed 132-column printer so paper feeds from below. And the Universal Printer Supports (B, \$19.95) clevate your printer, so paper can be placed underneath.

If your computer workspace is cramped, then our beautifully styled Computer Workcenter (C, \$79.95) is just what you need. There's plenty of room for your computer, printer, accessories . . . and your elbows.

To keep your 51/4" disk drives in tip-top shape we've got a Disk Drive Head Cleaning Kit (D, \$7.95). Then store diskettes safely in our Disk Library Box (E, \$4.95). It stores like a book when it's closed, and you can flip through up to 10 disks when it's open. If you need to store up to 50 disks, then choose a Diskette Storage Box (F, \$14.95).

To protect your computer from power spikes, we offer a Power Line Filter (G, \$49.95). It filters transients and line noise from appliances and reduces interactions between peripherals. And of course we offer a full selection of fanfold printer paper and high-quality diskettes (H, I).

Pappy Birthday Computerware®

Computerware® proudly celebrates its **10th anniversary!** In May of 1976 we opened the first computer store in San Diego, second in California, third in the nation. Computerware was truly a pioneer...and still is!

After a **decade of service**, Computerware® remains on the leading edge with new ideas and new products. But the key to our success remains the same...**good service, quality products, and fair**

Celebrate our 10th birthday with us by enjoying great savings on these favorite CoCo products. It's our way of saying thanks for your continued support!

Box 668, Encinitas. CA 92024 (619) 436-3512

Color Connection III

by BJ Chambless

This is the most comprehensive modern package for the Color Computer! All standard protocols are supported including CompuServe's Protocol B, XMODEM protocol, and XON/XOFF. Full support of the auto answer/auto dial feature for both Hayes compatible and Radio Shack modems is provided. You can use all band rates when using the Radio Shack Deluxe RS232 program pack! A big butter of up to 42K is oftered (64K is required for maximum buffer size.) You can print directly from the butfer, and files bigger than the bufter can be uploaded. The automatic XON/XOFF protocol downloads direct to disk as well! Printer band rates are selectable from the software.

The hi-res 51 x 24 screen has optional inverted colors and anti-truncation. All printable characters are available at the keyboard and all control characters are supported including ESCape, RUB, OEL, etc. Single key macros allow easy entry ot often used passwords and IO's with a single key louch. Our introduction to Oata Communications tutorial and glossary of terms are included. You won't tind a better telecommunication package anywhere! Requires 32K, modem, and disk drive.

Disk Fix & OS-9 Utilities

Now includes version for 2.0

by Harry Hardy

Unleash the real power of 0S-9! OISK FIX supports true double-sided/double density, 40 or 80 tracks, and step rates of up to 6 ms and each drive is separately configurable. (CCOISK included.) DMODE allows super easy modification of drive descriptors. OIRCOPY is the most powerful of OS-9 copy utilities! PATCH is a user-friendly program for inspecting and modifying a disk file. FILELOOK displays file modules without loading them into memory. COMPARE compares a disk file lo memory.

2.0 Update Only \$20 64K 08-9 Disk \$34.95

OS-9 Basic \$4995

by Computerware

Computerware's OS-9 BASIC is a full featured, easy-to-use, high level language for users of OS-9. It has been a standard for over tive years and the CoCo version supports both graphics and joystick functions.

Since you can invoke DS-9 commands from within a program, you can write many of those needed utilities with BASIC. Being a full-featured BASIC means that most CoCo BASIC programs can easily be converted to run on OS-9.

Now you can enjoy programming under OS-9 without the struggle of assembly language.

Color Basic Compiler

by Warren Ulrich III

If you like programming in Basic but would like the benetits of machine language, this is for you! CBC lets you write in familiar Extended Basic and then converts it to machine language for you. Unlike many competitors, CBC is a true compller. It does not token and interpret. it produces efficient, compact, machine code that is position independent, refecatable, and runs an average of 40 times fasterl CBC features over 60 commands and lunctions, a subset of Extended Basic. The compiler is limited to integer variables, but variables are easily passed between a compiled program and BASIC programs. Strings and multi-dimensional arrays are tully supported. Relations are supported within integer expressions and nested IF/THEN/ELSE statements are allowed. With all its power CBC is still easy to use! And it's been in use tor two years with great success. Our competitors simply cannot compete with the quality, speed, efficiency, and completeness of this compiler. Don't trust your work to anything less than CBC!

32K Disk \$39.95

NAP Monechrome Monitors

The 20 mhz band width, 800 line resolution, and 80 x 25 display insure a crisp picture. The non-glare screen and streamlined style is also attractive. Plus-it has audio input.

- Un-DISK can store BASIC and MACHINE LANGUAGE programs.
- Un-DISK is INVISIBLE. Yup! Un-DISK does not interfere with normal Color Computer Operation.
- Un-DISK appears only when you type the magic word VDOS.
- Un-DISK comes with comprehensive instructions which you may not need because:
- Un-DISK is self-prompting and easy to use!
- Un-DISK is provided on cassette.
- Un-DISK is faster than a slow clumsy DISK DRIVE and best of all . . .
- Un-DISK is CHEAPER Ihan a DISK DRIVE!
- Un-DISK will work even if you already own a disk but WHY BUY A DISK AT ALL?
- Un-DISK should be in the library of every serious CoCo user even if you own a disk says Frank J. Esser, independent reviewer for RAINBOW Magazine!

OK sure, disk drives ARE NICE. I own one. But if your Ilnances are limited, the Un-DISK can give you much of the power of the mechanical drive. Even if you already own a disk the Un-DISK can work like a super last extra disk.

EXTRA...EXTRA...EXTRA... Additional Power For \$14.95

Only with VDUMP for the Un-DISK!

- VDUMP lets you make a cassette backup copy of everything stored in the Un-DISK.
- VDUMP lets you save 5, 10, 15 or more programs on a single casselte lape life.
- VDUMP lets you switch Un-DISKs. With a single load operation replace a group of financial programs with a set of children's programs. (The new VDUMP lape overwrites the old.)
- VDUMP can allow you to save a whole lot of RAINBOW ON TAPE in a SINGLE file.
- VDUMP is the perfect companion to the Preble VDOS Un-DISK.

Available from Doctor Preble's Programs, naturally! Bringing you fine Color Computer Products Since 1983!

The Preble VDOS Un-DISK	\$34.95

The foursome had gathered and to the CoCo were wed...

As Visions of the Pro-Am Danced in Their Heads

By Matt Krom

Step up to the ball and analyze the green in front of you.

After deciding in which direction and with how much force to putt, slowly start the backswing...

No, this isn't the local miniature golf course. You are sitting comfortably at home playing nine holes of miniature golf on your CoCo. *MiniGolf* requires Extended Color BASIC and at least 16K RAM. However, 16K users may need to PCLEAR 2 before loading.

When the program is run, there is first a title screen and then a screen giving a choice between beginner or expert play. Simply type B or E to indicate your choice. If the beginner skill level is chosen, then one is added to the par of each hole, giving a better chance of finishing under par.

After the computer prepares the hole, it appears on the screen. The walls that your ball bounces off of are red. A blue circle is the cup, and the green area is, of course, the green. A small, yellow dot is the ball. On some screens there are hills that appear onscreen as an arrow pointing in the direction of the incline.

To putt the ball, use the right joystick and aim the ball in the desired direction. Overall, there are 256 possible directions in

Matt Krom, a freshman at Argos High School in Argos, Indiana, has been programming on the CoCo for four years. He hopes to become a professional programmer.

which the ball can travel. Hold down the firebutton and watch the red bar shoot up the left side of the screen. This bar determines the force of the putt; the longer the bar, the farther the ball will roll. Release the firebutton when this bar is roughly as long as you want the shot to be. Pay careful attention to the force of the putt. On certain holes, putting too far past the cup results in the ball rolling down a hill or dropping down a pipe to somewhere else,

After each hole, the computer gives the results and tells how much you are over or under par. At the end of nine holes, you are asked if you want to play again.

As with any other program, go ahead and explore or modify different parts of it. It's a great way to learn new programming techniques.

(You may contact the author of this program with any questions at 101610 18th Road, Argos, IN 46501, phone 219-892-5226. Please include an SASE when writing.)

Description of Program Lines

40 60	Read joystick
70 — 90	Wait until player releases button
100 — 180	Move ball for length of shot
190 280	Check to see if ball stopped on a hill
290 — 520	When ball goes into cup, check to see if it should
	travel through a pipe
530 — 540	If shot is too hard, ball rolls past cup
570 — 600	Title screen
610 — 620	Skill level screen
630 — 800	Loop for all nine holes
810 — 840	Final screen
870 — 900	Draw hole #1
910 — 960	Draw hole #2
970 — 1010	Draw hole #3
1020 — 1090	Draw hole #4
1100 — 1170	Draw hole #5
1180 1240	Draw hole #6
1250 1330	Draw hole #7
1340 — 1410	Draw hole #8
1420 1490	Draw hole #9

Description of Program Variables

H, V	= Horizontal and vertical location of ball
F, G	 Horizontal and vertical increments of ball trave.
P	= Force of pull
Z	= Firebutton reading
НО	= Hole number
PA	= Par for hole
TP	= Par for all holes played
SC	= Score for all holes played
S	= Number of strokes on hole

About Your Subscription

Your copy of THE RAINBOW is sent second class mail. If you do not receive your copy by the 5th of the month of the publication date, send as a card and we will mail another. Canadian subscribers and foreign airmail allow two additional weeks.

You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an "account number" and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, luc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone except those whose subscriptions are through our distributor in Australia.

INCREDIBLE!

Two Years In the Making. Speech Systems was formed to develop new and Innovative speech products. After 2 years of intensive Research and Development, we have created a truely sophisticated speech recognition device. Recognition rates from 95% to 98% are typical. Until now, such a product was outside the price range of the personnel computer market, and even small businesses.

EARS is trained by your voice and capable of recognizing any word or phrase. Training EARS to your particular voice print takes seconds. Up to 64 voice prints may be loaded into memory. You may then save on tape or disk as many as you like so that your total vocabulary is virtu-

Speech and Sound Recognition, EARS is really a sound recognition system, so it really doesn't matter whether you speak in English, Spanish, or French. In factyou do not have to speak at all, you can train EARS to understand sounds such as a musical note or a door slamming.

Hands Off Programming. Imagine writing your own BASIC programs without ever touching the keyboard. Everything that

you would normally do through a keyboard can now be done by just speaking.

Programming EARS Is Easy, LISTEN, MATCH and other commands have been added to BASIC so that programming EARS is a piece of cake! The single BASIC line: 10 LISTEN: MATCH will instruct EARS to listen to you and return the matching phrase.

tt Talks. EARS is also capable of high quality speech. We mean REALLY high quality. The speech is a fixed vocabulary spoken by a professional announcer. Speech Systems is currently creating a library of thousands of high quality words and phrases. For a demonstration call (312) 879-6844, you won't believe your ears or our EARS.

DISK OWNERS. EARS will work with any disk system with either a MULTI-PAK or Y-CABLE. Our new Triple Y-CABLE was specifically developed for those wishing to add SUPER VOICE as a third device.

You Get Everything You Need, You get everything you need including a specially designed professional headset style noise cancelling microphone. The manual is easy to use and understand. Several demonstration examples are included so you don't have to write your own programs unless you want to. EARS will work in any 32K or 64K Color Computer.

SUPER VOICE \$20 OFF

Imagine talking to your computer and it talking back to you. When you need an unlimited vocabulary, you can't beat SUPER VOICE. For a limited time, we will give you the SUPER VOICE for \$59.95 with your EARS purchase. Even if you already have another speech unit, here is your chance to buy the best and save \$20.

VOICE CONTROL

Applications for EARS are astounding, Here is our first of many listening programs to come. VOICE CONTROL is a program specifically designed to allow you to control any appliance in your house with your voice and our HOME COMMANDER (sold separately) or the Radio Shack Plug 'N' Power controller. For example, you can control your TV by saying "TV ON" or "TV OFF". . \$24.95

EARS SPEECH LIBRAR'

HIGH INTELLIGIBILITY SPEECH IS HER

EARS is far more than a speech recognition system that enables your computer to listen to you. EARS and the EARS SPEECH LIBRARY bring "high quality" speech to the Color Computer. EARS doesn't sound like a "computer" or "robot," it sounds like real people. It sounds natural since we use real people to create the speech.

HERE'S HOW IT'S DONE. Speech Systems has invested nearly \$10,000 in special audio digitizing and speech compression equipment. Each phrase is spoken by a human announcer digitized and then compressed so very little mem. ory is used, typically less than 400 bytes per word. For those familiar with the Texas Instruments "SPEAK and SPELL" line of educational toys, you are aware of the results. For those wishing a demonstration, call (312) 879-6844.

FEMALE and CHILDREN'S VOICES COMING SOON. The technique we use is independent used, female and young people's voices coming soon.

THE LIBRARY. Each group of the library con-SOON. The technique we use is independent of the speaker. A male announcer is presently tion. The SCIENTIFIC LIBRARY contains phrases designed for process or home control. The EDUCATIONAL LIBRARY has those words to help ensure keeping a child's attention. Words may be put logether to form sentences and easily produced from BASIC, so you can write your own programs with incredible speech quality.

SYMPHONY 12[™]

A 12 VOICE POLYPHONIC STEREO MUSIC SYNTHESIZER

- 12 SIMULTANEOUS VOICES
- STEREO & MONO
- 4 NOISE GENERATORS
- SOUND EFFECTS
- PLAYS AND MAKES MUSICA 2 FILES

STEREO and MONO. By connecting SYM-PHONY 12 to your home stereo system, music is produced in stereo, 6 voices from each channel. However, you don't need to have a stereo system, all 12 voices also come out of your TV or monitor.

PICK AN INSTRUMENT. SYMPHONY 12 lels you choose from 10 preset instruments to synthesize chimes, violin, oboe, banjo, harpsichord, piano and more. You can even change instruments as the music plays.

SOUND EFFECTS, SYMPHONY 12 is a sophisticated sound generator. 12 voices and 4 noise generators give you incredible sound effect capability. We have included gun shot, explosion, racing car and more.

WATCH IT PLAY. As SYMPHONY 12 plays, a graphics display of a piano keyboard shows the notes playing. The display is entertaining as well as very educational.

PLAY MUSICA 2 FILES. Thousands of MUSICA 2 users will be excited to know SYMPHONY 12 plays all music developed using MUSICA 2 like you have never Seen or Heard it. In fact we highly recommend the use of MUSICA 2 as a composition development tool for SYMPHONY 12. Use MUSICA 2's superior graphics input capability and then play it through SYMPHONY 12. You can also take advantage of our MUSIC LIBRARY series (sold separately) to give you access to over 500 music pieces representing 20 hours of music.

ULTIMATE MUSIC DEVELOPMENT SYSTEM. SYMPHONY 12, MUSICA 2, and the PIANO KEYBOARD give you incredible flexibility. Imagine silting down at the PIANO KEYBOARD, playing a piece and recording it as you play just as you would to a tape recorder. Save your masterpiece and then using MUSICA 2 edit it if you like and print it. If you have a MIDI synthesizer, you can take the music and play it using COCO MIDI (sold separately). Try that on an IBM, APPLE, or COMMODORE (good luck).

PIANO KEYBOARD. Eor those wishing to turn SYMPHONY 12 into a real polyphonic synthesizer we offer the extremely powerful and versalile PIANO KEYBOARD. The PIANO KEYBOARD was deisgned to be used in our entire music product line. You can use it wilh SYMPHONEY 12, MUSICA 2, SYNTHER 77 PLUS, and even our advanced speech synthesizer, SUPER VOICE.

When using MUSICA 2, you will be using 4 of the 12 voices available from SYMPHONY 12. To take advantage of the full 12 voice capability of SYMPHONY 12 you may use either the Color Computer's keyboard or the PIANO KEYBOARD.

Y-CABLE or MULTI-PAK. Tape users using both SYMPHONY 12 and the PIANO KEYBOARD will require a Y-CABLE. Disk users will require the Triple Y-Cable or MULTI-PAK.

SYMPHONY 12. You get over a dozen music and sound effect selections and complete documentation. Software is shipped on Tape or Disk.

COCO MIDI SEQUENCER/EDITOR

Now your COCO can talk to your MIDI music synthesizer. Whether you have a Korg, Roland, Casio, Yamaha, or Moog, it doesn't matter as long as it's MIDI equipped. Choose from

our entry level MUSICA 2 COCO MIDI system that plays MUSICA files or our Professional COCO MIDI SYSTEM.

- Supports up to 16 tracks.
- 2,000 events per track.
- 4,000 events all tracks.
- May be used as a sequencer.
- User friendly graphics display.
- Menu driven.
- Metronome available.
- Real time recording.
- Save your masterpiece to
- Tempo may be modified.
- Quantizing to 32nd or 64th.

- Playback any or all tracks at any tempo.
- Tracks may be deleted, copied, transposed or mixed.
- Filter out unwanted channel or type of MIDI data.
- Simple music editing.
- Requires 64K disk system.
- Transposition.

Comes complete with Rom Pak Hardware interface, cables, manual, and software. Disk users require Y-Cable or Multi-

Now under development, voicing patch libraries for the Casio CZ series of synthesizers.

MUSICA MIDI

COCO MIDI takes any MUSICA 2 music file and plays it through your music synthesizer. We offer you over 800 tunes from our MUSIC LIBRARY series (sold separately) or create your own music using the best music composition program available, MUSICA 2 (sold separately).

COCO MIDI includes: documentation, plenty of music, and the cable to connect between the COCO and your synthe-

MUSIC LIBRAR

The MUSIC LIBRARY series consists of 8 volumes: 100 through 800 each sold separately. Each contains over 100 four voice music selections with a playing time of over 3 hours each. The disk version is shipped on 5 full disks. When coupled with the STEREO PAK, the music is reproduced with unsurpassed realism.

A JUKEBOX program is included to allow you to select specific songs or automatically play each. These songs are ready to go, you don't need MUSICA 2 or a knowledge of music. MUSICA 2 users may customize each song. Each volume sold separately, specify tape or disk. \$29.95 Tape or Disk MUSIC LIBRARY 100

SYNTHER 77 PLUS

You control vibrato pattern, Bender rate, Volume level as well as Attack, Decay, Sustain, and Release (ADSR envelope). As you play you can record, then edit and save it to disk or tape. You can even fine tune it to match other instruments.

The PIANO KEYBOARD is not necessary, you can use your COCO keyboard but the PIANO KEYBOARD makes your COCO a real music instrument. \$29.95 Disk only

Plug this gem into your computer, connect to your home stereo system and sit back and enjoy music realism. The STEREO PAK is a hardware music synthesizer that plays our MUSIC LIBRARY series and MUSICA 2 music in stereo. Because it was designed specifically with music reproduction in mind, the sound is superb. The highs are crisp and clear while the bass notes will rattle your walls. Internally we use two high performance 8 bit digital to analog converters to assure fidelity.

The STEREO PAK is all hardware. It is intended as an enhancement for MUSICA 2 and our MUSIC LIBRARY series. Disk users will require our Y-CABLE or a MULTI-PAK. \$39.95

JEN'61 NOTE PIANO KEYBOARD

Our new 61 note (5 octave) full size keyboard is perfect for the beginner or professional. To give the PIANO KEYBOARD the most tlexibility, we give you a choice of 5 different products to use: SYMPHONY 12, MUSICA 2, SYNTHER 77 PLUS, SUPER VOICE, and the CZ-101 CONNECTION.

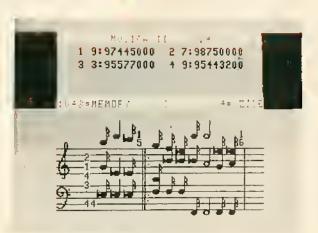

The PIANO KEYBOARD and SYM-PHONY 12 turns the COCO into a 12 voice music synthesizer. When used with MUSICA 2, the PIANO KEYBOARD provides a user-friendly means of inputting music. For those wishing control over Vibrato, Volume, Bender, as well as Attach, Decay, Sustain, and Release (ADSR), we offer SYNTHER 77 PLUS, a monophonic synthesizer. SUPER VOICE, COCO's most advanced speech

synthesizer, doubles as a music synthesizer when used with the PIANO KEYBOARD. For those with the Casio CZ-101 music synthesizer, the CZ-101 CONNECTION allows you to connect the "full size" PIANO KEYBOARD to give you standard keyboard.

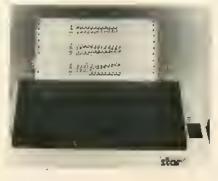

61 NOTE PIANO KEYBOARD \$129.95 CZ-101 CONNECTION \$29.95

MUSICA 2 \$29.95

- When in stereo mode, music is played through our STEREO PAK (purchased separately).
- Loudness of each voice may be individually specified.
- Memory available is constantly displayed.
- Voice waveshapes may be exchanged between voices at any point.
- Tempo may be specified and may even be altered as the music plays.
- Flats and sharps supported.
- Billions of timbre combinations.
- High resolution graphic display, looks just like sheet music.
- MUSICA 2 is 100% software, no need for hardware unless you want music produced in STEREO. In that case, the STEREO PAK may be purchased separately. It's a must for the audiophile!
- Repeat bars allow repeating of music without re-inserting music a second or third time.
- 30 page manual describes all.
- · Requires 64K.

 Output music to your printer (Gemini 10X, Epson, R.S. printers).

- Allows you to specify key signature.
- Voice timbre (waveshape) may be altered by specifying harmonic content just like stops on an organ.
- During editing, voice being inserted is displayed.
- Each measure is numbered for easy reading of music.
- Measure bars aid in reading and developing music.
- Each voice may be visually highlighted for easy identification.
- 4 Voices produced simultaneously.
- Input notes from Coco keyboard, joystick, or Piano Keyboard.
- Play music from your own BASIC program.
- Block copy music for easy music development.
- 100% machine language so it is lightning fast.
- · Vibrato effect easily produced.
- With STEREO PAK, voices may be switched between left and right speakers as music plays.
- Durations include: whole, half, quarter, eighth, sixteenth, thirty-second, sixty-fourth, and triplet.

MUSIC THEORY

COURSE 1

COURSE 2

A more advanced course that deals with: Major and Harmonic Minor scales, interval spelling, Triad (Chord) theory, Inversions, Dominant 7th chords, and ear training of the intervals. 32K Disk only . \$49.95

'SUPER VOICE'

COCO'S MOST ADVANCED SPEECH SYNTHESIZER.

IT TALKS, SINGS AND MORE.

only . . . \$79.95

WITH EARS PURCHASE only . . . \$59.95

SUPER VOICE is no ordinary speech synthesizer. It uses Silicon Systems, Inc. SSI-263, the most advanced speech/sound chip available. SUPER VOICE is not only capable of highly intelligible speech, sound effects, and singing over a 6 octave range, but now we have turned SUPER VOICE into a monophonic Super Music Synthesizer with our PIANO KEYBOARD.

IT TALKS. A free TRANSLATOR text-to-speech program makes writing your own talking program as easy as SAYING "HELLO."

SUPER VOICE works in any 32K or 64K computer. A disk system requires a Y-Cable or Multi-Pak.

Here are the facts; the decision is yours.

Design Your Own Calendar Pin-Up

By Hong Kwong

Picture Calendar prints a calendar for 1986 and, with a few modifications, it prints one for any other year. What's different about this program is that it customizes the calendar with any drawing in PMODE1 or PMODE3, It fills about two-thirds of a 9 by 11 page with a graphics screen and then prints the calendar with a picture on top.

The program is intended for the Star Micronics Delta-10 printer, however, it should be directly compatible with most Epson and Gemini printers. It may be altered to work with other manufacturers' printers as well. And, this program does require that the disk drive controller be unplugged from the CoCo.

The operation of the program is fairly simple. To begin, have a PMODE4 screen saved on cassette. When first running the program it asks if you want to load a new picture from tape or print the current one in memory.

If you just started, choose to load from tape. After doing so, prepare the

tape and press ENTER. When the screen is loaded, it returns to the menu. Now it is ready to make a printout. Before choosing Option two, however, make sure the printer is on and the paper is at the top of the page. After selecting Option two, the picture in memory appears on the screen along with a blinking rectangle. The rectangle shows what will be printed on the calendar, Just move the right joystick up and down until the portion of the graphics screen to be printed on the calendar is correct and press ENTER. The program then prints the calendar and returns to the menu.

I find that printing anything drawn in PMODE3 or 4 tends to be stretched out of proportion because it is only a 128 by 74 printout. But if the drawing is done in PMODE1, most of the screen fits on paper and looks much better.

To change the year of the calendar, change the data in Line 850 and Line 860. Line 850 holds the year. The data on Line 860 is set up in pairs, one pair for each month from January to December. The first number of the pair tells the computer what day to start counting from. This number will always be less than or equal to one and it can easily be found by looking at a calendar of the year wanted.

Hong Kwong is attending the University of Michigan at Dearborn. Author of the programs Zookey from Mark Data Products and Inatak from DSL, he is studying electrical engineering.

For each month, look at what day the lst falls on and start counting backwards until you reach Sunday; that'll be the number for that month. For example: The first day of January 1986 falls on Wednesday. Starting with Wednesday = 1, count backwards. Tuesday = 0, Monday = -1 and Sunday = -2. The number for January is -2. The second number of the pair tells how many days are in that month. Change the days for February only if it is a leap year.

If using a printer other than the Delta-10, you may have to change some or all of the printer codes. All of the codes used in this program are located in lines 170 through 250.

Here is a description of what each code does:

E\$ — Escape code

C\$ — Set the print pitch to condensed (17 cpi)

L\$ — Change line spacing to 7/72 inch

AS"

"A\$"

"A\$"

"A\$"

"A\$"

"A\$

L1\$ — Change line spacing to 40/ 216 inch

In\$ - Initialize printer

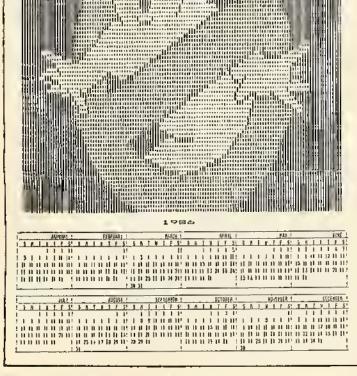

X1\$ - Set printer to expanded print

X0\$ — Turn off expanded print EM\$ — Select emphasized printing

U1\$ — Turn on underlining U0\$ — Turn off underlining

If any of these codes are different on your printer, just replace the codes in lines 170 through 250 with the correct ones for your printer.

NINIABLE DRAGON NOW USER

To make the most of your new Dragon microcomputer from Dragon-Tano, you need *Dragon User*— the international, independent magazine for Dragon owners.

Each issue of Dragon User contains:

- reviews of the latest software
- programming advice for beginners
- hardware projects

The Dragon microcomputer was launched in the UK last year. Since then we have developed a knowledge and mastery of the machine's abilities. You can benefit from our experience by subscribing to Dragon User, which is expanding its coverage to include all US developments.

To make sure that you receive a copy of *Dragon User* regularly, subscribe direct to us. This costs only \$29.95 for 12 issues airspeeded to you — or take advantage of our special offer to long-term subscribers. Individual copies of the magazine can be obtained from your Dragon dealer.

- program listings covering games and utilities
- reviews of Dragon peripherals and add-ons
- technical advisory service
- programming articles for users

-	
	Subscription order form. Receive a Iree book and save money by taking out a
	long-term subscription — a two-year subscription saves 10%, a three-year
	subscription saves 20%. In addition, long-term subscribers will receive a free
	copy of either The Working Dragon or Dragon Games Master, Please send
	a check, made payable to Dragon User, with this form.

Baseball Card File

By James W. Wood

you have wall-to-wall baseball or football cards? Wish there were a better way to organize teams or players than to have them occupy an entire living room floor? If so, then Baseball Card File is designed for you. It creates a random access file for storage of baseball cards. The program's options include the ability to add cards to a file, examine for all occurrences of a player, examine for all occurrences of a team. editing of a card and printing of all cards in a file.

When running the program, enter a name for the file. Use any eight digit (or less) combination that starts with a letter, Perhaps BASEBALL, BBA LL85, or CUBS (if the file is to contain only one team). A disk that contains only files should be able to store the information for 3,000 baseball cards. The program itself can be saved on a separate disk. Make sure a formatted disk is in place when running the program. The information that is stored includes the card's player, team, the year as a two-digit number, manufacturer of card and how many of that card you possess.

When examining by player, the program asks for a name and displays all occurrences of that player. The same goes for examination by team. The

James Wood is in his fifteenth year of teaching at Atwood Hammond High School in Atwood, Illinois. His subjects include photography, physics, chemistry, computer programming and math courses. He holds master's degrees in both instructional media and physical science education.

SMALL BUSINESS ACCOUNTING This sales-based accounting packege is designed for the non-accounting oriented businessman. It also contains the liexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Meintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor status Reports. Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports. Account Status Lists, and a Journal Posting List.

\$79.95

ACCOUNTS RECEIVABLE Includes detailed audit traits and history reports for each customer, prepares invoices and monthly statements, meiling labels, eging lists, and an alphabelized customer listing. The user can define net terms for commercial eccounts or finence cherges for revolving eccounts. This package functions as a standatione A/R system or integrates with the Small Business Accounting package.

These programs are user Inendly and menu driven. Sample Irensactions are included, Each peckage lealures a hi-res screen. Each requires a printer, a minimum of 32k and at least 1 disk drive.

PAYROLL Designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions eech. Calculates payroll and lax amounts, prints checks and mamterins year-to-date totals which can be automatically trensteired to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pey and determines texes to be withheld. Additional outputs include mailing list, listing of employees, year-to-date tederal and/or state tax listing, and a listing of current misc, deductions. Suited for use in all states except Oklehome and Delaware.

DMS Databese Menagement System. Search, sort. calculeted fields, disk and tape interlaces. \$24.95

EDIT function is helpful for correcting any mistakes made or for changing the number of a card owned.

I did not include a delete mode because I thought no one would want to trade the last of any one card. However, deletion can be accomplished by editing a card and changing it to another player.

When adding cards, first examine by player. If that card is already entered,

use EDIT to change the quantity. If you don't have that card, use ADD A CARD, If you enjoy this program, you can buy me some peanuts and Cracker Jacks!

ACCOUNTING SYSTEM

The Mark Data Products Accounting System is ideal for the small businessman needing a fast, ellicient means to process income and expenses, prepare detailed reports and maintain most of the information required at tax time. The system is a family of programs which operate by means of a "menu" selection scheme. When the operator selects a rask to perform, the computer loads a program designed to handle that task from the system disc. The system disc contains all of the programs required to create, update and maintain data files and prepare the necessary accounting reports including a transaction journal, a P & L or income report, an interim or relat balance and a balance sheet.

This accounting software equals or exceeds higher priced packages for other computers and includes a detailed operating manual ONLY \$99.95

ORDER ENTRY

The Mark Data Products sales order entry system provides a fast, efficient means to enter orders, print shipping papers and invoices, prepare sales reports, and monitor receivables.

An excellent companion to the accounting system. \$99.95

Data Management System

Rainbow, Nov. '84 *Easy File is one program that lives up to its name... Easy File is so easy it speaks for Itself!

Hol CoCo, Feb. '85 "I've examined four database programs for the CoCo in the last few months. Easy file is the easiest to master and the one that best addresses my needs. If you need to organize the information in your life, Easy File might just be the best method."

Need a good mailing list or customer list program? How about a program to keep track of your investments, your computer magazines, or record collection? Do you have an inventory of all house-hold items for insurance purposes? EASY-FILE will do all of these things and many more. The EASY-FILE master disc and instructions are packaged in an attractive 3-ring binder, Requires 32K

Order Yours Now! Get Organized for Only \$59.951

The Color Computer Supercharger

- A blg 52 character by 24 line screen
 PRINT @' is fully implemented on the big screen

Picprt: Good Things Come in *All* Sizes

By Mark Sullins

Picprt and its machine language subroutines print out graphics pictures, charts or graphs (which can be placed on the graphics screen) on the Radio Shack DMP printers.

Picptt (Listing 1) is a short BASIC program to call the machine language subroutines, handle any necessary manipulations with the original graphics picture and set the printer Baud rate. The machine language subroutines are all loaded in under the name of PRT/BIN.

Reduce (Listing 2) is the first subroutine's source code. Reduce prints the contents of graphics pages one through four at 2.5 inches by 2.7 inches (see Figure 1). At this size, one pixel (PMDDE 4) corresponds to one dot on the printer. For Y, For X and For Y2 are like FOR/NEXT loops in BASIC, For YY = 0 to 196 step 7, For XX = 0 to 255 and For YY2 = 0 to 7, respectively. This is to test pixels in the order necessary for printing. PPOINT through SET are the lines that perform the equivalent of a PPOINT statement in BASIC. Line 700 does the actual printing. Lines 860-1060 reset the

Mark Sullins is a biology research assistant at Kansas State University and has been using his Color Computer for his wife's business records and for fun for over three years.

printer and the variables before returning to BASIC.

Enlarge (Listing 3) is the second subroutine's source code. Enlarge prints the contents of the graphics pages at 30.8 inches by 31.6 inches (see Figure 3). Since this is wider than the printers can print, it prints out first the left half and then the right half, which can be taped together for the complete picture. At this size, one pixel corresponds to a block the size of one character on the printer, Enlarge tests each pixel (one bit) from left to right and from top to bottom, as this is the form in which it is printed. Put is the section of the program that informs the user the printer must be aligned to the top of a new page. Lines 350-420 test the pixels and lines 430-480 print either a block or a space from the character table, CHRTB. Finish to 970 resets the printer and the variables.

Normal (Listing 4) is the source code for the final subroutine. Normal prints the graphics screen at 7.7 inches by 7.9 inches (see Figure 2). One pixel in this size is equal to one-fourth of a character on the printer. Normal tests pixels similar to Enlarge but tests two rows and Iwo columns at a time. Lines 350-460 test pixels. Lines 490-600 use a little Boolean algebra to determine the appropriate character to print from the

character table, CHRTB. Lines 610-660 get the character from the table and print it. Lines 920-1080 reset the printer and variables.

All three subroutines must be combined into a single binary file by typing the following with the three subroutines (assembled) on the disk in Drive 0:

LDADM "REDUCE/BIN" LOADM "NORMAL/BIN" LDADM "ENLARGE/BIN" SAVEM "PRT/BIN", &H2900, &H7E0A,&H7900

Now you are ready to print out your

favorite graphics picture by running Picprt and following the instructions on the screen,

(Questions concerning this program may be directed to the author at 138 Redbud Estates, Manhatten, KS 66502, phone 913-532-6626. Please include an SASE when writing.)

THE MOTION PICTURE

A complete animation development system for your CoCo! An object oriented graphic screen developer. Using this tool you can quickly and simply animate your pictures. Take standard graphic screens that you develop and incorporate them into MOTION PICTURES. Animate up to eight frames, yielding smooth animation. Generale screens from objects and build screens from stored object files. Included are routines to display animation from BASIC. We believe you'll like this program, so we make this offer: We will send you a demonstration disk for \$4.00 which you can apply as a credit if you buy the program. Requires 64K, Disk, \$39.95.

A SUPER COLOR PRINTER The OKIMATE 2 AT A SUPER LITTLE PRICE!

Prints ten characters to the inch, twelve characters fifteen characters to the inch, 'talies. Italies. Italies.

Underline Saperson: et

Small, Light weight, Quiet. Prints up to 80 characters per second. Prints four color graphics. Includes disk software for black and white, two color and four color screen dumps of Color Computer hi res graphics.

Okimate 20, Plug 'n' Print, paper, black and color ribbon,

instructions, software and cable for:

Guaranteed Pretested

Having trouble with your CoCo? We have the chips you need. Call us. (805) 962-3127

MORE KEYS

At last a quality numeric keypad for your Color Computer, This 15 key numeric pad plugs inside your computer and gives you the convenience of rapid numeric data entry. Dimensions: length 6½" (165mm), width 4" (101 mm), heighi 3" (76 mm). Baked black enamel finish. Specify computer model. MORE KEYS complete with cable and connector.

DOUBLE DRIVER I

The BEST monitor driver available. Color composite, monochrome and audio output. For original CoCo D. E and F boards, \$24.95.

MONO II

Mono II for Color Computer 2. An excellent monochrome monitor driver that has audio output also. Specify model needed.

\$24.95.

DOUBLE DRIVER II

Finally a monitor driver for the Color Computer II that lets you use a monochrome and a color monitor simultaneously. We're proud of this new driver. The six transister circuit provides optimal signal mixing and signal gain. Excellent monochrome output and better quality resolution in the color ouput

than any driver we have seen. Audio output also, Fits all models of the Color Computer II. \$29.95.

THE COCO-SWITCHER

A QUALITY PIECE OF HARDWARE

The CoCo Switcher allows you to hook up three peripherals to your RS-232 jack. Connect your modem, printer and any other RS-232 compatible peripheral to the CoCo Switcher, An LED on the CoCo Switcher shows if your computer is on or off at a glance, The LED flickers when transmitting or receiv-

SPORTS STATISTICS **PACKAGES**

Statistics programs for the coach, team manager, or avid fan who wants to keep accurate team and opponent records. Menu-driven and easy to use. Put your team in the CoCo with Sugar Software's Sports Statistic Packages!

Soccer will provide:

- Mid-season entry, update and additions.
- Correct and review all stats in file
- Correction on all input . screens
- Raw dump of data to the
- punter for the player, goalie, and opposing leam's files Summary of the player, goalie, and opposing team's stats
- Track 20 individual player stats
- Summarizes 16 individual player stats
- Track 14 goalie stals
- Summarize 10 goalie sials
- Track 19 opposing leam stats

Baseball will provide:

- Mid-season entry, update and additions
- Correct and review all stats in lile
- Correction on all input screens
- Raw dump of data to the
- printer for the player, pitcher, and opposing teams files Summary of the player, pitcher and opposing feam's stats
- Track 21 individual player stats with 18 cum stats per player
- Track 15 individual pitcher stats with 11 cum totals per pitcher
- Compile total learn summary of 16 separate stats
- Compile total pitching summary of 11 stats
- Track 15 opposing learn stats with 14 cummed stats

Rental Property

Disk - \$34.95 32K Required

Package

- Keeps track of all your rental properties
- Provides instant screen or printer summary of all your properties
- Maintains and prints a detailed, itemized listing of each of 28 expense categories
- Gives you a schedule of the Accelerated Cost Recovery System depreciation allowed for each tax year for 3, 5, 10 and 15 year property

Football will provide:

- Mid-season entry, update and additions
- Correct and review all stats in file
 - Correction on all input screens
- Raw dump of data to the
- printer for the player and opposing leam's lifes.
- Summary of the player and opposing leam's stats
- Track 90 individual player stats
- Summarizes 63 individual cum stats per player
- Summarize 17 cum leam stals
- Summarize 28 cum opposing learn slats
- Team summanes of 87 stats
- Comparative summary printouts 63 stats for your learn
- Comparative summary printouts 62 stats for opposing team
- Over 350 possible stats!

Basketball will provide:

- Mid-season entry, update and additions
- Correct and review all stats
- Correction on all input screens
- Raw dump of dala to the

printer — for the player and opposing team's files

- Summary of the player and opposing leam's stats
- Track 22 individual player stals with 18 cum stals per player
- Summarizes 17 individual player team stats
- Compile opposing learn summary of 19 separate stats

The CoCo Knitter program is designed for the Tandy Color Computer and an 80 column printer. Menu oriented and user friendly, you can generate and print sweater instructions for:

- Cardigan or Pullover
- Round or V-neck
- Raglan or Set-in Sleeve

The CoCo Knitter \$24.95

Your choice of yarn:

Baby, Sport or Worsted weights

Choose specific size within each category:

- Baby and Toddler
- Children
- Subteen
- Teen Boys
- Juniors
- Ladies (8-18)
- Women (38-48)
- Men

The CoCo Knitter will produce the instructions for your sweater!

The CoCo Knitter requires 32K ECB.

Dealer and author inquiries are always welcome. Canadian ilealers should contact Kelly Software Dis-tributors, 1.111., P.O. Box 11932, Edmonton, Alberta T5J-31.1, (403)

Disk software compatible with Radio Shack DOS nalv.

SUGAR SOFTWARE

1710 North 50th Avenue Hollywood, Florida 33021 (305) 981-1241

A complete entalog of other sweet Sugar Software profinets is available.

Add \$1.50 per program for postage and handling, Florida residents add 5% sales tax.

COD orders are welcome. CIS orders EMAIL to 70405, 1374. No refunds or exchanges.

The CoCo Calligrapher.

Use your CoCo, your 8-bit dot addressable graphics printer and the CoCo Calligrapher to create beautiful signs, invitations, flyers, greeting cards, diplomas, certificates, awards and love letters.

The original Calligrapher letters are 36 points (1/2 inch) high and variably spaced. It includes an easy-to-use menu-oriented program and these three typestyles:

Old English

Cartoon

Old English Cartoon

Gay Nineties

The CoCo Calligrapher requires 32K ECB. Tape \$24.95/Disk \$29.95

ADDITIONAL TYPESTYLES

These tapes of additional typestyles are available for \$19.95 each. They can be easily moved to disk. The original Calligrapher program is required.

Tape 1 - Reduced, Reversed, and Reduced-Reversed versions

Old English

Gay Nineties

Cartoon

uvwxynoldsbabcde

All typestyles on Tapes 2, 3, 4, 5, and 6 include Standard (1/2 inch), Reversed, Reduced, and Reduced-Reversed unless otherwise noted.

Tape 2: Broadway/Old Style

Broadway Oldstyle

Tape 3: Business/Antique

Business ซึ่งกรัฐแอ

These disks of additional typestyles are available for \$49.95 each.

Disk 1 - all type styles on Tapes 1, 2 and 3. Disk 2 - all type styles on Tapes 4, 5 and 6.

Tape 4: Wild West/Checkers

Wild West Checkers

Tape 5: Star

Hebrew

Stars 7

Victorian (Standard and Reverse only)

64K Custom Setup

By James J. Ruggles

happened again. You start to LLIST your new program and the printer is off. Even hefore this you had to POKE in the right printer Band rate.

Ever wonder what ROM versions are in that great magic machine called a CoCo?

64 K Custom Setup takes care of these problems. It also changes the Extended BASIC sign-on message and Disk BASIC sign-on message, defines a new eursor, and gets rid of the dreaded OK when a program crashes. You can speed up the disk drive so it operates at its maximum speed and efficiency.

All these wonderful and funtastic things must, of course, be done in the 64K all-RAM mode.

I'm a firm believer in "if a program isn't an educational experience, then it isn't worth typing in." This is my philosophy and I've tried to apply it in every aspect of this program.

When the screen clears, notice that the printer status, Band rate and step rate are flickering. This is to remind you that they can be changed.

Jim Ruggles lives in East Ryegate, Vermom, and has had an interest in computers for the past 20 years. He has an amateur radio and FCC license. To change the printer Band rate, press '5'. The line that reads Printer Band Rate changes to Enter Desired Band Rate. Enter in the printer's Band rate. It must be less than 10,000 Band and this number replaces the 650 in Line 19.

To change the disk drive step rate and considerably increase its operating speed, press '6'. The line that reads Step Rate (Millisecs.), changes to Step Rate 30, 20, 12 or 6?. Enter 30, 20, 12 or 6; nothing else is accepted. Use the lowest number that allows the drive to operate properly. Then replace the 30 in Line 24 with this same number.

To end the program, press a number from '1' to '4'. Pressing '1' executes a NEW. Pressing '2' initializes BASIC "warm start." Key '3' simulates a cold start. This causes the printer Baud rate to default to 600 Baud and it's necessary to POKE 65503, 127 to get back into the 64K mode. Key '4' does an END.

How are we going to accomplish all this? It's not too difficult, if we write the program in modular form. Any of the modules can be deleted or new modules can be added. If you don't have a disk drive, delete the disk drive section, If a printer isn't in use, the printer section can be deleted. Add and delete the modules of choice.

The sign-on messages and OK

prompt can be changed to any printable characters. POKE different numbers into memory locations 41380 and 41384 and watch what happens. They both affect the cursor.

If your CoCo won't handle the triple speed POKE, try the double speed POKE, If neither one works, just delete them. In fact it's best to REM out these two POKEs until certain the program is functioning properly. Otherwise CoCo might hang up and you won't know if the computer or program is at fault.

A word of caution. Don't make any changes until sure that the whole program is working properly because, if you do, it may not work at all.

All the REM lines can be deleted without affecting the operation of the program. But they can be really useful in making changes.

After the typing is done, save the setup with CSAVE "SETUP" for a tape system or SAVE "SETUP BIN" for a disk system. Be sure to save several copies before attempting to run it, for a single typo could cause Setup to crush.

Everything else is pretty much self-explanatory. If you have any questions, comments, additions or suggestions, please feel free to write me at Warner #3, East Ryegate, VT 05042. Be sure to enclose an SASE if you want a reply and 111 do my hest to get back to you.

The Educational Answers

SCIENCE GAME

32K EB · disk only/\$29.95 Over 600 questions in 9 categories. Makes learning science facts fun. Game format, 1 or 2 players, teams. Grade 8 and up.

STREET MAP GAME

32K - \$19.95 tape/\$24.95 disk Hi-res, screen and graphics portray a typical section of a street map. This one shows people's homes, the school, the park, etc. Questions on how to get from one place to another are asked and the footsteps are shown.

CHEMISTRY TUTOR

32K · disk only · \$29.95 A hi-res. 4 part program that drills high school students in Elements, Symbols. Naming Compounds, Common lons, and Balancing Equations. Correct answer given after 2 incorrect responses. A valuable tool lor studying chemistry.

5 LIGHTPEN PROGRAMS

32K EB - \$44.95

Five menu driven educational programs designed for children in grade 1 and 2, and special educational students. Basic addition, basic multiplication, shape series matching, number series matching and word rhyming are included. All on a HI-RES screen, with graphics. User need only to use the light pen to operate the programs. (LIGHT PEN INCLUDED)

VERBAL MATH PROBLEMS

PIZZA GAME

32K EB - tape/\$19.95 Learn to locate coordinates on a

grid. Hi-RES text and graphics.

AREA & PERIMETER

32K EB - tape/\$19.95 Triangles, rectangles, and circles are covered in this HI-RES lext and graphics program.

SALES & BARGAINS

32K EB - tape/\$19.95 Learn to lind the discounted price. HI-RES text and beautiful graphics.

DISTANCE PROBLEMS

32K EB - tape/\$19.95 Moving graphics and text combines on a Hi-RES screen, Rate x Time = Distance in all its forms.

ATTENTION TANDY 1000 USERS

NOW AVAILABLE! EACH \$34.95

4 of our most effective math programs have been converted for use on the popular Tandy 1000.

- 1. OPENING A BANK ACCOUNT
- 2. COMPARISON SHOPPING
- 3. DISTANCE PROBLEMS
- 4. SALES AND BARGAINS

OPENING A BANK ACCOUNT

32K - Disk Only - \$24.95

A set of programs designed to introduce and provide practice in the skills of filing out bank applications, deposit and withdrawal slips, and computing bank account balances. Loaded with graphic presentations. Grades 3-6.

\$\$\$

DOLLARS & SENSE

16K-Ext. - \$14.95 tape/\$19.95 disk Learn to make purchases. Graphic displays of items kids love. Player buys items using doltars and coins to practice using money correctly. Solutions given.

McCOCO'S MENU

16K-Ext. - \$14.95 tape/\$19.95 disk America's favorite pastime-going out to eat. Learn to buy and add up your purchases from a typical fast food restaurant menu. Gain skill in using money. Different prices each time.

COCO WHEEL OF FORTUNE

32K - \$19.95 tape/\$24.95 disk Hi-res, graphics and screen in this version of the popular TV show. 1-6 players. Spin the wheel for points and guess a letter to solve one of the 200 puzzles. Have fun while strengthening LA skills.

COLORGRADE

32K - disk only - \$29.95 An easy to use classroom grading program. Keeps grades for up to 6 classes of up to 40 students per class. Many options including weighted averages and hard copy to printer.

Plain Jane Print Needs an Appointment with the Stylist

By Gene Short

or all CoCo owners using an Epson or Epson-compatible printer, *Print Stylist* is a program that sets your printer for any of the many print style combinations available on the Epson. Best of all, you don't have to worry or fret about printer codes. Even if you don't have an Epson printer, the program can easily be modified by changing the printer codes in the program for your specific printer (see Printer Code Usage Table).

The program is menu driven and print style options can be toggled on and off by simply pressing the appropriate key. Printer codes remain in effect until the printer is turned off or changed by another program. Use this program to set your printer to be used with a favorite word processor. The program can also be used as a single-line type-writer. Since the printer must remain online to receive the printer codes, the program constantly monitors the status of the printer and lets you know when the printer is offline.

Instructions aren't necessary to use

this program. The menu is selfexplanatory. Although very easy to use, the following explains in detail how the program works.

The program uses two screens. The first screen to appear is the *Print Stylist* selection menu. This is the menu to select print style combinations. The following styles are available: pica, elite, italics, emphasized, subscript, expanded, compressed, double strike and underline.

By pressing the key associated with the desired style, an '*' appears, indicating this print type is on. Pressing the key again turns the print type off. It's not necessary to press ENTER. Try different combinations by selecting more than one print style. At any time you may see the effects of the selections by pressing the 'P' (Print Option). You may also change the Baud rate by pressing the 'B' (Baud Rate) key until the desired Baud rate is displayed. (Don't forget to change the Baud rate on the printer's interface.) To reset the printer to normal status, press the 'R' (Reset) key.

By the way, when the menu first appears, it is possible to immediately start your selections, even while the title is being displayed across the screen. When ready to exit the program, press the '@' key. The printer codes selected remain in effect and the computer returns to BASIC. You can now load your word processor or any other program and use that print style.

Sample Printout:

PRINT STYLIST PRINT STYLIST STYLIST BTYLIBT PRINT STYLIST PRINT BYYLIBT PRINT BTYLIBT PRINT STYLIST PRINT STYLIST PRINT STYLIST PRINT STYLIST PRINT STYLIST

Genc Short is the data processing manager for a food distributor and a member of D.P.M.A. His primary language is COBOL and he has been a CoCo owner and RAINBOW subscriber for two years. He lives in Charleston, West Virginia with his wife, Jo Ellen, and sons, Chip and Jeff.

The other screen is the line input screen that can be used as a single-line typewriter. Press the '!' key from the Print Stylist selection menu to access this screen. Type the line to be printed then press ENTER. The printer prints the line in the font combinations you have selected. Pressing ENTER without typing anything generates a line feed. This line input screen is also good for printing on preprinted forms. For example, to print an amount in a box on a form that starts in column 50, space over to 50 then enter the amount. To return to the Print Stylist selection menn, press the "!' key then press ENTER.

To see a demonstration of the various print style combinations, press ?? for Print Demo from the *Print Stylist* selection menu. This option delivers a full page of print styles at random. Since the Demo option uses a random number generator to determine the style to be printed — all possible print style combinations may not be selected and others may be selected more than once. Each time the Demo is requested, the results will be different. Run it a few times and see your printer in action using *Print Stylist*.

This has become a very popular program in our computer club. It's not only fun to use but also has proven to be a valuable printer utility.

(You may send your questions about this program to Mr. Short at 108 Kendra Road, Charleston, WV 25311. Please enclose an SASE.)

Table One: Printer Code Usage Table

The following table shows each program line that contains print codes and explains their usage. To modify this program for another printer, simply look up the print codes in the printer manual and edit the program lines changing the printer codes for your printer.

Line Number	Epson Print Codes	Explanation
TABLIDE	Time Codes	Explanation
450	CHR\$(27)"2"	Sets line spacing to six LP1
940	CHRS(27)"2"	Same as above

One-Liner Contes THE RAINBOW'S One-Liner Contest has now been expanded to include programs of either one or two lines. This means a new dimension and new opportunity for those who have "really neat" programs that simply just won't fit in one line.

Here are the guidelines: The program must work in Extended BASIC, have only one or two line numbers and be entirely self-contained no loading other programs, no calling ROM routines, no poked-in machine language code. The program has to run when typed in directly (since that's how our readers will use it). Make sure your line, or lines, aren't packed so tightly that the program won't list completely. Finally, any instructions needed should be very short.

Send your entry (preferably on cassette) to:

Setting the Stage for 'Spring Cleaning'

By Cray Augsburg Rainbow's CoCo SlGop

extend a mighty wel-Come to Marty Good-man (MARTYGOOD-MAN). Marty is now manager of the database on our Color Computer SIG on Delphi. This change went into effect March 1, 1986.

Marty Goodman is a physician trained in anesthesiology and has also practiced general medicine at the Haight-Ashbury Free Medical Clinic where he was medical director for two years. He is also an avid electronics tinkerer. Over the last several years, Marty has been involved in a wide variety of aspects of the Color Compilter. These areas include software and hardware design, marketing and consulting, telecommunications and technical writing. He is probably best known in the CoCo Community for the following: his published articles in CoCo magazines, for his introduction

Cray Angsburg serves as RAINBOW's technical assistant and holds an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Kentucky. His username on Delphi is RAINBOWMAG.

of Graphicom and WEFAX to the CoCo world and for being an outspoken gadfly both on Delphi and CompuServe as well. His non-computer passions include running, mountaineering and outdoor photography. We are pleased to have Marty and his considerable experience on our Delphi Color

We have begun restructuring of the database in an attempt to make it easier to use. We also hope to decrease the present delay in moving submitted programs into the public areas of the database. We hope to be running full steam ahead by the time you read this. If you have any questions or comments please MAIL them to Marty or me. We are open to any and all suggestions. For a detailed look at the present changes in the database area, we have included a somewhat lengthy report from our new database manager.

High Speed

The new 2400 Baud operation is now in effect. As stated in the past, there is no surcharge for using this feature. Now you can decrease your online costs by speeding up your uploads/downloads.

Database Manager's Report

By Marty Goodman

For the last few months, I had been nagging Jim Reed and Lonnie Falk with suggestions for improving the database area on Delphi's CoCo SIG. The upshot of all of this is that I have, in effect, been given the privilege of "putting up or shutting up." I am now part of the Delphi and Falsoft staff, with the responsibility of reorganizing and stocking the CoCo SIG database.

Allow me to explain briefly a little about the structure of our database, and then a little about the changes that should be in effect by the time you read

Delphi's Database

Delphi's database (storehouse of programs you may download and use at home) is divided into about a dozen different section topics. Each section topic is turther divided into up to six official subtopics. This division into subtopics is accomplished by the database manager assigning "primary key Just call Uninet or Tymnet to get the 2400 Baud access number for your area.

Dear Diary . . .

Here's a tidbit for newcomers as well as those "old-timers" who may have missed Jim Reed's announcement on the SIG. We have an online appointment/diary section available to users. When in conference you can type <DIARY (or just <DI) to get to this new area.

If you wish to schedule an appointment just ADD it to the system. You will be prompted for the date, time and location. Then, when you first logon to Delphi, if you have an appointment for

"We have begun restructuring of the database in an attempt to make it easier to use."

that day, you will be prompted much as you are for new mail.

The diary area is similar to the appointment scheduler, Just enter the date and whatever text you wish to save. The text you enter goes into your personal work space and no one else will be able to read it.

These additions to the system will come in handy when you need to "write" something down or give yourself a little reminder. When you have a chance, give it a try.

Conference Save

Recently, a question in conference was, "Is there a way to save conference proceedings to your work space?" My answer was "no." To save a transcript of a conference session just type /LOG when in conference and a copy of the session will be saved in your work space area. To turn this feature off, just enter /NDLOG. The only catch to this is that you must be set for /REPEAT or your own comments will not be saved. I hope this helps some of you who might like to review something discussed in conference.

words" for each topic. When you go through the process of submitting a file to one of our sections in the database, you are asked to choose one of these six primary key words to associate with your file. Note that you also have the opportunity to assign any other key words of your own choosing, but the system requires that you assign one of ours as well. By assigning a "primary key word" you will have, in effect, placed your file in a given subtopic within the section topic. More will be written on this.

Section Topic Changes

Three previous section topics have been replaced with other topics. Education, Home Applications and News Notes are gone. In their places we have three new sections:

1) Hardware Hacking

This topic is for text liles describing how to upgrade your CoCo, fixes for the Color Computer and for third-party hardware, patches for the system ROMs, binary images of alternate character generator ROMs for alternate character fonts for "lower kits" and for PBJ Word Paks, tips on how to customize your CoCo and third-party accessories, and various schematic diagrams.

The primary key words, or subtopics, for the hardware section are:

Firmware — material relating to ROMs or EPROMs

Memory — files relating to memory upgrades

Fixes — corrections for flaws In Radio Shack and other hardware

Custom CoCo — tips relating to enhancing your CoCo

Chip tips — general on CoCorelated hardware

Other -- (all etse!)

This section is very dear to my hearl, as those who know me must realize. I have been a dedicated CoCo hardware hacker for years. I look forward to this unique opportunity to more effectively share my hacking experiences with you, and to allow you to share your discoveries and ideas about hardware with others. All hardware hackers: Take this as a warm personal invitation to drop by the Hardware Hacking area.

2) Utilities and Applications

This is, of course, a very broadly defined category. It appears in place of the old "Home Applications" category. In it, you will find mailing list, database, checkbook, directory utility and other such material. The key words are:

Printer — label makers, set-up routines . . .

Finance — database, mailing list,

Diagnostics file management — directory utilities, file conversion . . .

News and Reviews

This topic is subdivided as follows:

Reviews

This subtopic is for members to tell other members of their experiences with given software and hardware products. No holds will be barred. I have always telt that while ads, product announcements and magazine reviews are hetpful in deciding whether or not to get a given piece of software, one of the most reliable sources is the word of the owner and user of that software.

This section is created largely to enable you to get such information and to share it. Your reviews will have to be tactually accurate. And, we will require you to back up any subjective comments (like "It's great!" or "It stinks!") with hard evidence as to why you leel that way about a given product. Our statf will be watching closely to prevent irresponsible and unwarranted attacks

on any product.

In any review you submit, state what your relationship, If any, is to the maker and/or seller of the product in question. Makers and sellers of given products will not be permitted to post reviews of their own products. They will, in some cases, be permitted to post comments about competing products, but only on the condition that their comments are preceded by a statement making it quite clear that they are the maker or seller of a competing product. We will experiment with this because often the designer of one product is uniquely qualitied to analyze designs of other similar products.

Replies to BAINBOW

This is reserved for those who wish to expand on or take issue with any product reviews in RAINBOW. Reviews are always subjective to some extent, and in the past some lively discussions have appeared in our torum, generated by folks differing with printed RAINBOW reviews. In all cases, the name of the product, the review, the author of the review, the issue of RAINBOW in which the review appeared and the page number will have to be stated in the tirst paragraph of any submissions. This will be a kind of online "Reviewing Reviews."

Producers' Comments

This subtopic is for use exclusively by makers and sellers of material commented on in other subtopics within this section. Designers and sellers of material discussed elsewhere in this section will be specifically invited to reply.

New Product Announcements

This is tor makers of CoCo products to post descriptions of their products. Authors of submissions will be required to state just what their relationship (if any) to the product is (seller, designer, bela tester, etc). Note that even Those not officially associated with the development or distribution of a new product are invited to post new product announcements. For example, Untend to post a description of the new Microworks DS-69A digitizer, a prototype of which I saw demonstrated at Microwork's lab recently. As we know, new Tandy products often appear in one part of the country long before they appear elsewhere. Thus, we would also like to see this subtopic used by members to tell the rest of us about new Tandy sluft that has appeared in their area.

Bulletins

Reserved tor CoCo news that is not specifically related to a given CoCo product or products.

Threads

In the past we have had some livety discussions of new and old products in the forum. From time to time the SIGops may choose to edil some of these discussions and post them in this subsection so new subscribers to Delphi can have the benefit of easily reviewing those old debates.

We expect this new section to become one of the most lively and controversial sections within our database. If used with proper respect for others, this section can become one of the most valuable for our members users and producers alike. It is a section I have always dreamed of running.

"Mischief, thou are afool! Take thou what course thy wilt." — Shakespeare

File Extensions and Posting Conventions

In order to help facilitate recognizing what sort of files are in the database, I would like to introduce you to a list of suggested extensions for files you submit. A file extension is the group of three letters that follows the filename. For FILENAME.EXT, "EXT" is the three-letter extension.

Delphi ofters some substantial advantages over older information services in that you can assign a filename of up to 32 letters, allowing for the name to be vastly more descriptive than the cryptic six- or eight-letter tilenames allowed elsewhere. To further aid prospective downloaders, we have established the following conventions for assigning extentions:

.BIN — This is used for binary files of ML programs and for binary data

(graphics images posted in binary form, for example).

.BAS - This is used for EASIC programs posted in ASCII form. Please, wherever possible, post BASIC programs in ASCII form, so as to allow folks with older, non-XMODEM supporting terminal programs to have a chance at downloading the program. Please refrain from using "compressed" or "lokenized" BAStC file tormat. To create an ASCII-type BASIC lile, load your BASIC program into the CoCo's memory, then save it using the command SAVE "FILENAME", A. The ",A" part of that command causes the tile to be saved out in ASCII tormal. Note that CSAVE "FILENAME", A also works for lape systems. Wherever possible, we do urge the use of X-MODEM file transfer protocol to upload such ASCII BASIC files.

.SRC — Use this on ASCII assembly language SOURCE tiles you upload to

.DOC — Use this on ASCII files that are written documentation for using another program.

.PIX — Use this extension on ASCII Graphicom and other single-frame size graphics images you upload to the database if they have been put into PIXCMP tile format.

.CMX — Use on ASCII CoCo Max and other double-size graphics images that you have put into CMXCMP file tormat.

.TXT — Use for all other ASCII files that are not .SRC, .BAS, .DOC, .PIX or .CMX

.TOK — This extension will be used quite rarely, and usually only by advanced hackers. It is reserved for files that are uploaded in compressed ("lokenized") BASIC tormat.

In a few strange cases, a BASIC tile cannol be uploaded as an ASCII file. This is sometimes the case with "endpacked" BASIC programs that contain "hidden" ML programs. For those very few cases where a file must be uploaded as tokenized BASIC, use the extension .TOK. Note that atter downloading with XMODEM but before running end-packed BASIC programs, you will have to aller the end of program pointer to get such programs to run correctly.

In general, please contact me in the CoCo SIG Forum or via Delphi MAIL before submitting any lokenized BAStC program. Where at all possible, please Iry to use techniques of including ML code in BASIC (such as using DATA statements that get poked into memory) that are compatible with putting the whole program into ASCII format.

As you can see, a lot of changes are in the works. We expect our Delphi CoCo SIG database, formerly a relatively empty and sleepy place, will start buzzing with activity and buiging with interesting tiles of all kinds for you to download. Catch you all on the Delphi CoCo SIGI

the magazine on which the actual program listing is.

With this in mind, if you wanted to find the "Education Notes" program from the February 1986 issue, you would type:

READ 2/86 134 Education Notes

Keep in mind that the date and page number make the item unique so you could just as easily type only:

READ 2/86 134

You do not need the name of the program. As another example, suppose we wanted to find the disk utility on Page 96 of the same issue. We just type:

READ 2/86 96

Note that there are two spaces between the date and the page number. We hope this clears up any confusion in this matter.

Any Tips?

We at THE RAINBOW are always searching for hints or tips for RAINBOW readers and CoCo SIG members. Authors of any previously unpublished hints are welcome to send them to me (RAINBOWMAG) via Delphi MAIL. Authors of original hints will receive \$10 upon publication in THE RAINBOW. This offer is good for the first publication only. All submitted material becomes the property of Falsoft, Inc.

Uploads

Now to thank those users who share their wares with other members of the CoCo Community. The following people have recently submitted programs to the database section of our SIG.

Marty Goodman, MARTYGOOD MAN, DBASE-CHANGES#1.TXT, this text file discusses changes in the database area.

William Borie, DISKBANK, Pac redial, an RS-232 Pak redial program.

Jolin Phelps, SPCMAN, Dman5, an update to the continuing saga of the disk manager.

Ken Schunk, KENSCHUNK, DMP110.DRV, a printer driver.

Stephen Macri, DRACMAN, GOLF BAS, a text version of the sport.

Donald A. Turowski, PACRUISER, *INTROCOM.BAS*, an introduction to computers.

printer pergets

Penumbral Prints

By David S. FitzSimmons

The following graphics screen dump programs are for use with the Gemini-10X printer or any other similar printer. The programs create 8½ by 11-inch pictures and outputs at any Baud rate.

Listing I prints a blackand-white picture of the graphics screen. Before printing, check to find the color code number of the picture background color (green is 1, yellow is 2, blue is 3, red is 4). To do so, type the following:

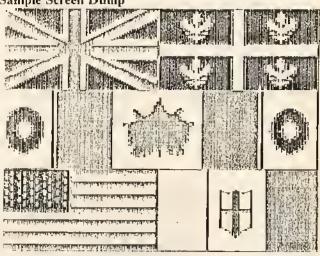

PMODE 3,1:SCREEN1.0: FORT=1T0100000:NEXTT

Press the BREAK key once you have determined the number. Change the value of 'C' in Line 100 to whatever color code number represents the background color. The 'l' of PMODE3,1 in the previous command may need to be changed depending on what graphics page the picture appears. If it appears in a different page, change the number in the program also.

Listing 2 prints a picture using four different shadings: white, light gray, dark gray and black. The different shades give a better representation of the picture's true color.

Before londing either program, make sure the graphics screen is in memory. The programs print pictures from any graphics PMODE 0-4. However, due to the graphics handling techniques of the CoCo and the constraints of these programs, some pictures in PMODEs other than PMODE 3 or 4 may appear distorted. Try experimenting with each picture.

Okidata Dumps

By Scott Humphries

The following programs take any picture in PMODE4 in the CoCo's memory and convert it to the Okidata printer's graphics code, printing black as black and white as white. To print black as white and white as black, change the = in lines 40 through 90 to >.

Hardcop1 is a slow version of the program that does not use the high speed POKE, It analyzes and prints the graphics simultaneously. Hardcop2 is a faster version that first analyzes the graphics and then prints them.

Around the World in 60 Days

By Roger Miller

Vacation Planner prints out day-to-day events that can be referred to while traveling so you don't miss anything on your agenda. The program allows up to 60 days of planning, but if you

want to change this to a larger number of days, then change the 60 in the FOR/ NEXT loop in Line 110 to the desired number.

Vacation Planner is designed for a DMP-120

printer, but can be altered for use with other printers. A list of the line numbers that contain printer codes is as follows:

210
250
270

Function
Poke for 1200 Baud
printer speed
Extended type mode
End extended type
mode

TURN OF THE SCREW

Expanding the theory and understanding the concept of memory . . .

Exploring Memory Cells

By Tony DiStefano Rainbow Contributing Editor

ast time we looked at how a few flip-flops and gates added up to make a memory cell. A memory cell can also be part of a bigger block of memory cells. This time, I'll expand on the theory of memory cells and describe in detail the concept of memory mapping, chip select, data and address buses.

Let's start back at the one-cell memory bit. Figure 1a shows the block diagram of a one-bit by one-bit memory chip. This chip does not exist on the market; it is too simple. It would take thousands of these chips along with thousands of wires to make a decent amount of memory. Today there are

Figure 1a

+V

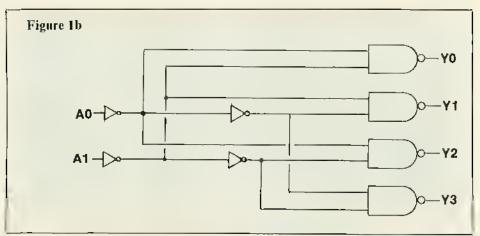

One-bit memory cell

E

Tony DiStefano is well-known as an early specialist in computer hardware projects. He lives in Laval Ouest, Quebec.

static memory chips that have 8K by 8 bits wide in one 28-pin DIP (Dual Inline Package) and dynamic memory chips pushing one megabit (that's one million bits).

are high. When A0 is low and A1 is high, Y1 is low. When A0 is high and A1 is low, Y2 is low. And finally, a 1 on both A0 an A1 produces a low on Y3. If you look at the truth table for this circuit

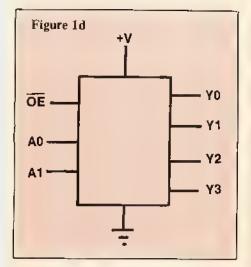

It's time for some theory. Remember when I described the binary number system? This is where it comes in handy. Let's look at two binary bits to start with. Two binary bits have four different combinations: 00, 01, 10, 11. Figure 1b shows a circuit that has two inputs and four outputs. This type of circuit is known as a decoder. There are decoders with two-, three- and four-bit inputs. More about this later. For now, two bits will prove my point. Look again at Figure 1b. When A0 and A1 (on the input side) are both low, Y0 (on the output side) is low and the other three

INPUTS			OUTPUTS			
ŌE	A0	A 1	ΥO	Y1	Y2	Y3
0	0	0	0	1	1	1
0	0	1	1	0	1	1
0	1	0	1	1	0	1
0	1	1	1	1	1	0
1	Х	Х	1	1	1	1

(Figure 1c), notice that binary counting and individual outputs are related.

I hope by now you are starting to understand Hex and binary relations because they get more important as we go along. Figure 1d shows the block diagram of this two-to-four decoder. The other line in our decoder (Figure 1d only) is an input. The name of this line

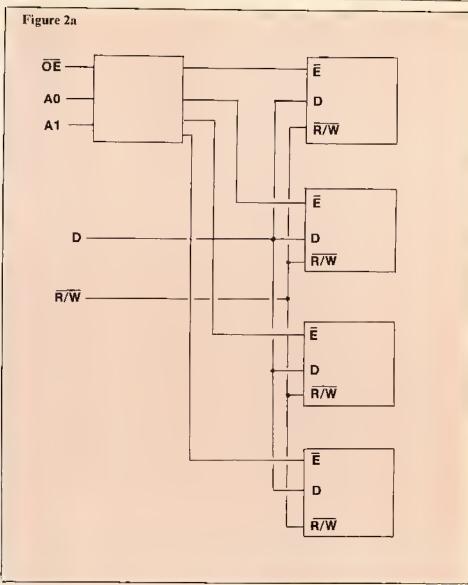

is Output Enable, \overline{OE} for short. When this line is low, all of the preceding is true, but when this is high, the outputs Y0 to Y3 never go low. It can also be known as a Chip Select if it is connected to the right gates.

Figure 2a shows how the decoder and our one-bit memory cell go hand-in-hand. One thing to notice is the decoder inputs are labeled A0 and A1. There is a good reason for using the letter A. In this case and almost all cases, the letter A, along with another number, is short for Address lines. In a computer system, there are address lines to form an address bus.

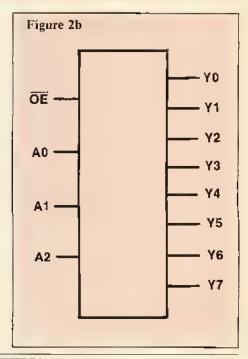

The definition of address bus is: Address lines are inputs that reflect a binary number and identify a specific position or location in a memory system. Or more plainly, when the CPU wants a specific piece of data in memory, it puts out a binary number equal to the number of the location it wants. The 6809 CPU in the CoCo can specify 65,535 different locations. If you recall, that boils down to 16 binary bits (2 to the power of 16). That is so the 6809 CPU has 16 Address lines, A0 to A15. Maybe we should get back to our two-address memory block.

To continue showing individual gates for decoding would not only be silly, it would take up enormous amounts of room in this magazine. They don't call

today's chips LSI (Large Scale Integration) for nothing. A single chip can have the equivalent of a quarter of a million gates. Imagine trying to draw that many gates! It's much easier to draw block diagrams, and as long as you understand the theory behind these blocks, it makes the diagrams a lot easier to read. From now on, I will use block diagrams whenever it is not convenient to use discrete gates.

The block diagram in Figure 2b shows the same idea as Figure 1a, but with more address lines, therefore more output lines, and can thus select more flip-flop memory cells. Each time an address line is added, the number of gates needed to decode the input goes up exponentially and the amount of outputs doubles. If there are four address lines, you can access 16 different locations; if there are five address lines you can access 32 and six address lines

gives access to 64. Here is a list relating the address lines to the amount of discrete locations possible:

Address Lines	Discrete Locations		
	Decimal	Hex	
1	2	2	
2	4	4	
3 4 5	8	8	
4	16	10	
5	32	20	
6	64	40	
7	128	80	
8	256	100	
9	512	200	
10	1024	400	
11	2048	800	
12	4096	1000	
13	8192	2000	
14	16384	4000	
15	32768	8000	
16	65536	10000	

Look how neat the Hex column is. It's much easier to see the doubling effect of adding one more address line. It's also a lot cleaner,

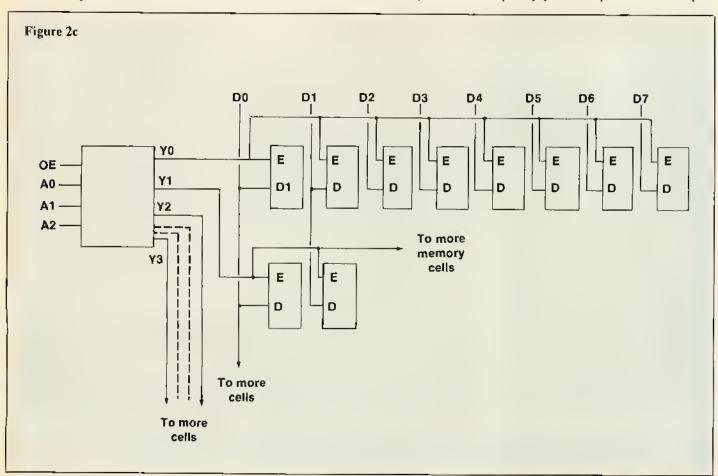

Up to now, I have shown you only one data bit per location. The CPU can

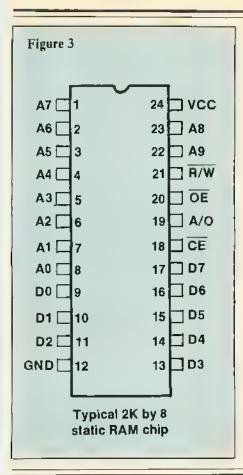

access eight data bits at a time. We could duplicate the circuit eight times; it was done in the past and is still done in the case of dynamic RAM chips. One bit wide per chip. The CoCo also used chips eight bits wide, but that's ROM. Figure 2c again shows our two-address memory chip but with a twist. Every decoded address line (Y0 to Y3) is connected to eight memory cells. Each of these cells has its own line. Each of these lines is labeled with the letter D and a number.

As you may have guessed, the numbers represent which bit is being accessed. They begin with zero and can go up to any number, usually the amount of data bits that the CPU can handle. Most small microcomputer CPUs have eight bits. They form one byte. Model 100, the Apple II+, the Atari 800 and the Commodore 64 all have eight bits. Other CPUs have 16 bits like the Amiga, the Apple Macintosh and the Atari 520. Then there are more powerful CPUs with 32 and 64 bits. Those are the minis and full mainframe computers.

Another aspect of data bits is a little harder to explain. That is the aspect of internal and external data bus. This leads us to another definition, the Data Bus: data lines that are bi-directional lines providing communication between discrete components in a computer system. Some CPUs have only eight data lines coming from the CPU, which is to say there are eight pins on the CPU chip, but it can handle more than eight bits internally. Usually a CPU has double the number of internal data capabilities than external. In order for the CPU to read or write doublecapacity data, it must do two reads or two writes - one after the other and incrementing the address bus by one before the second. I'll get into the structure of the 6809 at a later date.

If you gather all the information and theory I have given you in the last few articles and stuff it all into one package, what do you get? Presto, you have a full-blown memory chip. Figure 3 shows the pinout of a typical 2K by 8 RAM chip. This chip contains 16,384 memory cells arranged into 2,048 locations of eight bits each. That means 11 address lines (2 to the power of 11 equals 2,048, right?) and eight data lines. It has all of the inputs and outputs that I have been describing in the last few articles. There should be no surprises. The following is a pin-by-pin description of this chip.

A0 to A10 — These inputs only are address lines that choose which memory byte is to be selected. There are a total of 11 address lines, therefore this chip has a maximum of 2,048 (\$800) bytes of memory.

D0 to D7 — These bi-directional lines form the data bus in which data can be transferred to or retrieved from the internal flip-flops.

GND — This is an electrical ground to the chip. All signal levels to the chip are with respect to this pin. Commonly known as Vss, it has a voltage potential of zero volts.

Vcc — This input supplies power to the whole chip. The voltage requirement for a typical memory chip is from three to eight volts. The current (power) requirements for a 2K memory chip can range from 10 to 100 milliamps for a regular chip and 10 to 100 microamps for a CMOS chip.

R/W — This Read/Write input determines the direction of data flow through

the data lines. When this pin is high, the memory chip sends out data stored inside. This is a Read action. When it is low, the data lines enter data to the chip to be remembered. This is a Write action.

CE — This input selects the chip. When this pin is high, the chip is in the tri-state mode. The chip is inactive and the data lines are not reading or writing.

OE — This input is an Output Enable pin. If the CE pin is low and this pin is high when reading, the data is ready, but the data lines are kept in tri-state until the OE line goes low. When reading, this pin can be used as a second chip select or enable.

All of these lines in one package make up a memory chip. All computers need memory. There are a lot of different kinds of memory chips and what I described here is just one of them. But, whatever the kind of memory or the packaging material used, they are all basically (in theory) the same as the ones described. That's it for this time.

Two-Liner Contest Winner . . .

Run this program to see what the CoCo can do to entertain you. Note: Setter turn up the volume for this one.

Mike Collett Elfrida, AZ

(For this winning two-liner contest entry, the author has been sent copies of both The Second Rainhow Book of Adventures and its companion The Second Rainbow Adventures Tape.)

H.D.R. SOFTWARE ENHANCE YOUR COCOI

Enhance your CoCo with THE ENHANCER. It gives you 26 user-definable "soft keys" of up to 50 characters each, It gives you upper- and lower-case characters and 128 special characters in a 32-by-24 high-res display. The Enhancer gives you Pascal-like procedures, keyboard auto-repeat and much more. The Enhancer smoothly complements your CoCo's vocabulary. It uses NO user RAM! The Enhancer requires 64K, extended BASIC and comes on disk or tape. It costs U.S. \$18.00.

See review in this month's Rainbow Magazine.

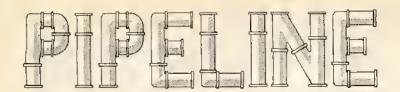

TEXT PROCESSING POWER WITH TXEDIT Why toy with other text editors? Get TXEDIT, the best word processor for the CoCo. Txedit uses the high-res screen to display true lower-case characters. It has graceful error recovery, and will retain all text even if you press RESET. It has powerful embedded formatting commands, including headers, footers, vertical and horizontal margins, page numbering, centering, right-justification, double-spaced printing, and any "special effects" your printer can handle. TXEDIT has a huge 47K text buffer. It is totally command-driven and user friendly - no more wading through endless menus. An online help screen is available to assist you. TXEDIT is lightning fast — It requires no slow disk "overlays." It takes less than 3 seconds to find a word at the end of a 17-page document! TXEDIT will work on a 64K CoCo with Radio Shack Disk BASIC (any version) and costs U.S. \$44.95.

The Enhancer Disk or Tape, 64K \$18.00 TXEDIT Disk only, 64K \$44.95

To order, send a cheque or money order to:

H.D.R. Software 27 Doyle Street St. John's, NF CANADA A1E 2N9

Tel. (709) 364-3125

TERMINAL PACKAGE — Now available on the CompuServe CoCo SIG is a terminal program that accepts CompuServe's 'B' protocol for file handling. A.B. "Sandy" Trevor has altered the "dumb" terminal program, DTE, for this capability. DTE, which is intended for OS-9 systems, is available for downloading in two forms: 1) C source code, and 2) as a binary file. The package has been modified to run with the PBJ 2SP serial port and the Deluxe RS-232 Pak. It can be downloaded from either the CCSIG or the OS-9 SIG.

TAKE A STRONG STAND — Bretford Manufacturing Inc. has announced that their mini printer stands now have a new twist. The edges of the one-piece metal stands have been rolled to increase their stability. The WSPSI is designed for 80-column printers and retails for \$22. The WSPS2 is intended for use with larger 132-column printers and retails for \$31. Both units have slots for bottom-feed printers. For more information, contact Bretford Manufacturing Inc., 9715 Soreng Ave., Schiller Park, IL 60176, (312) 678-2545.

TOP SELLERS — Manna Computing Concepts has announced publication of the Christian software Top Ten Best Sellers for 1985. The list includes, among other items, two programs for the CoCo. Bible Books is a package that tests your knowledge of the 66 books of the Bible, Batter Up is a takeoff on baseball; miss a question and "yer out!" For further information, contact Mauna Computing Coucepts, Box 527, Dept. P., Woodstock, GA 30188, (404) 928-8111.

HEAVYWEIGHT PRINTER — If you are using your Color Computer for industrial applications, you may be interested in the Syntest industrial printer. The 80-column, 130 cps SP-2010 Printer features a belt drive for perfect dot alignment and increased mean-time between failures. It

has internal graphics and fonts, and includes a 7K buffer for increased throughput. Several standard interfaces, including RS-232C and Centronics, may be used with the SP-2010, which retails for \$985. For more information, comact Syntest, 40 Locke Dr., Marlboro, MA 01752.

NEW PRICE! — Morrison & Dempsey Communications has announced a reduction in price for the SmarTEAM™ 103/212A modem. The new price for this 300/1200 Baud modem is \$300. This modem, which is manufactured by Team Technology Inc., is guaranteed to be 100 percent compatible with the Hayes Smartmodem® 1200 and includes a two-year warranty. The modem is distributed in the U.S. by Morrison & Dempsey Communications, 19209 Parthenia, Unit D, Northridge, CA 91324, (818) 993-0195.

FAST DOT-MATRIX — C. Itoh has introduced the C-310, a personal printer capable of speeds up to 300 cps in draft mode. The 80-column printer also features a 50 cps near-letter quality and produces letter quality printing at 28 cps. The C-310 includes a variety of resident character fonts, a semi-automatic paper loader and an eight-bit parallel interface. Suggested retail price is \$599. For more information, contact C. Itoh Digital Products, 19750 South Vermon Ave., Suite 220, Torrance, CA 90502.

HALL OF FAMER — Tandy Corporation/Radio Shack has received the Consumers Digest Hall of Fame Award for meritorious service in the national retail market. The award recognizes Tandy for "marketing its line of technologically advanced Tandy® computers at competitive prices, while maintaining one of the most extensive dealer/service networks in the country."

CONGRATULATIONS — The month of May marks the 10th anniversary of Computerware. This California-based supplier of CoCo wares was started as a

reaction to poor service in the computer market of the mid-1970s. The company began dealing with the 6800 family of microprocessors and quickly moved up to the 6809 with the advent of the Color Computer. To honor the event, Computerware will be offering several specials throughout May and will be introducing a special-issue catalog. Warmest thoughts to Paul and Sue Searby for a job well done!

COCO REGRESSION — Multivariate Regression Analysis is a new business and research forecasting tool introduced by MatheGraphics Software. With this program, the user can determine the most likely linear relationship between as many as eleven variables, Multivariate Regression Analysis is available on tape or disk for the Color Computer at a price of \$30. For more information, contact MatheGraphics Software, 61 Cedar Rd., East Northport, NY 11731, (516) 368-3781.

LOCK BOX — Eldon office products has announced the Combo File with Lock for storage of diskettes, cassettes and data cartridges. The unit will accommodate up to four cartridges and thirty-five 51/4-inch diskettes and includes removable plastic dividers. Other features include a hinged cover and a non-magnetic lock for improved data integrity. Suggested list price is \$24.98. Contact Eldon Office Products, Dept. SP. 1130 East 230th Street, Carson, CA 90745, (213) 518·1600.

CIS/MCI LINKUP — CompuServe Incorporated and MCI Communications Corporation announced the interconnection of their electronic mail services. The interconnection allows subscribers to the two companies' electronic mail systems to communicate with each other instantaneously. Subscribers of either company's service can create and send messages to subscribers on either network using the same methods and commands with which they are already familiar.

FREE OFFER — Bob Albrecht has announced a "savings plan" for RAINBOW readers. Bob will send a three-issue subscription to *DragonSmoke* to the first 100 people who request a free subscription in writing and identify themselves as RAINBOW readers. *DragonSmoke* is a periodical focusing on IBM PC compatibles, the Tandy 100 and 200 and the CoCo. *Send your request to DragonQuest, P.O. Box 7627, Menlo Park, CA 94026.*

Versatile Label Maker Eliminates Messy Hen Scratches

By Charles Baldridge

he Label Maker was written especially for those people who, like me, have a horde of unlabeled disks and can't write clearly enough to read by any means. Pick up a package of 3.5" by 15/16" fanfold labels and you are ready to clean up that disk collection!

The program is designed to run on any 16K computer with Extended BASIC. Disk is not required. It operates a DMP-200 or DMP-120 printer at 1200 Baud or, if you prefer, 600 Baud.

The program gives a type option for each line. Choose elongated, bold or standard. There is also a choice of character sizes ranging from ten characters per inch (standard) to 16.7 characters per inch (condensed). By mixing elongated type with the character sizes, there may be between five and 16 character may be between five and 16 character sizes.

Charles Baldridge is a student at Johnson Central High School in Paintsville, Kentucky. He has been working with computers for three years,

acters per inch (15 to 48 characters per line).

The following table gives the settings for each line length,

Characters	Elongated	Character
per line	Ü	size
15	Yes	Standard
18	Yes	Compressed
24	Yes	Condensed
30	No	Standard
36	No	Compressed
48	No	Condensed

Due to the operation of the DMP-200 and the DMP-120, elongated characters may not be mixed with bold characters.

When the program instructs you to ready the printer, be sure the print head is lined up with the top of the label and is online, otherwise the program will not print correctly.

(You may send questions about this program to the author at P.O. Box 541, Paintsville, KY 41240, phone 606-789-6883, Please enclose an SASE when writing.)

A super upgrade from Disk Omni Clone! Back everything up! This amazing program handles non standard" disks with ease. We haven't found any disk yet that it can't handle. Don't ever be caught without a backup again! Lowest price too! Beats most "copy protection" programs! 32K DISK \$29.95

COCO SCREEN OUMP

The best screen dump program for the Panasonic, Epson & Gemini printers ever! Have the option of standard or reverse images w/regular or double sized proportional pictures. 600-9600 Baud too! A must for Graphicom and CoCo Calendar users. 16K TAPE/DISK \$19.95 (see Nov '84 Rainbow Review)

DISK UTILITY 2.1*

A multi-featured tool for USER FRIENDLY disk handling. Utilize a directory window to selectively sort, move, rename and kill file entries. Lightning fast Disk I/O for format, copy and backup. Examine contents of files, the Granule Table, plus the size, load addresses and entry points of all programs. Single command execution of both Basic and ML programs. 32K/64K DISK \$24.95 "Disk Utility has proven itself very quickly at my liouse" - Ed Ellers Oct '84 Rainbow Review pg. 220

"EH!

SPECTRUM FONT GENERATOR

Now you can write files using any <u>CoCo Word Processor</u> (Telewriter-64, VIP Writer, etc.) and convert them to special <u>Highly Detailed character sets!</u> Some of the character sets supported are <u>Italics</u>, <u>Old English</u>, <u>Futuristic and Block. A character set editor</u> is included to create custom sets or modify existing ones! Supports most <u>dot-matrix printers!</u> DISK \$29.95 (see Dec '85 Rainbow Review)

SPECTRUM DOS

Add 24 NEW Disk commands—with 2 Hi-Res screens! Supports 40 track & Double-Sided drives, 6 ms stepping, auto disk search, error trapping & "EPROMABLE". 64K DISK \$49.85 New LOW price!! \$24.95

SCHEMATIC ORAFTING PROCESSOR

Save time and design pro looking diagrams using a 480X540 pixel worksheet w/6 viewing windows.

Over 30 electronic symbols w/10 definable symbols. (Even Logic gates & Multipin chips!) Print hard copy and save to disk. 64K DISK \$49.95 New LOW price!!! \$29.95 (see Jan 84 Rainbow Review)

HEMI

BASIC+

Basic+ provides (23) of the most used BASIC cmds w/one keystroke plus scrolling & editing w/single key! Also included is a 32 character typahead BUFFERED keybd w/auto key & repeat plus a 32K Print Spooler & Ptr Echo!! 64K DISK \$29.95 (see Jan '86 Rainbow Review pg. 192)

COCO CHECKBOOK

Use your CoCo to keep track of your checking and savings accounts! Printout individual personal checks! 32K/64K TAPE \$29,95 DISK \$39.95 (see April'85 pg. 210 & Oct'85 pg. 197 Rainbow Reviews)

Submitting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

Program submissions must be on tape or disk and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs. All programs should be supported by some editorial commentary explaining how the program works. Generally, we're much more interested in how your submission works and runs than how you developed it. Programs should be learning experiences.

We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a selfaddressed, stamped envelope (SASE) to: Submissions Editor, THE RAINBOW, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. We will send you some more comprehensive guidelines.

Please do not submit programs or articles currently submitted to another publication.

May 1986

Protect Your Valuable Magazine Collection With . . .

DISTINCTIVE, DURABLE RAINBOW BINDERS

Fot greater convenience, order RAIMBOW Binders through the shopping area of the CoCo SiG of Delphil

Each issue of the RAINBOW is a vital resource that you will refer to again and again, to gain insights, to explore new areas of interest or simply to refresh your memory. So, you need to keep your copies of THE RAINBOW sale — in high-quality, vinyl binders that provide complete protection.

These distinctive red binders not only ensure that your RAINBOWS stay in mint condition, but they showcase your collection as well. Each binder is clearly embossed with the

magazine's name in gold lettering on both the front and the spine. They're a handsome addition to any room.

They also make it possible for you to organize your work space and eliminate the clutter on a permanent basis. You'll spend more time on your CoCo and eliminate those frustrating searches for misplaced magazines.

A set of two handsome binders, which hold a full 12 issues of THE RAINBOW, is only \$13.50 (please add \$2.50 for shipping and handling).

Special Discounts On Past Issues With This Offer

To help you complete your collection of THE RAINBOW, we're offering a special discount on past issues with the purchase of one or more sets of binders.

When you place an order for six or more back issues of THE RAINBOW at the same time you order your binders, you are entitled to \$1 off each magazine, which normally sells for the single issue cover price. For an order form, please refer to our "Back Issue Information" page (check Table of

Contents under departmental listings). Also with this offer, copies of the "Official And Compleat Index To THE RAINBOW" (a comprehensive index of RAINBOW's first three years, July 1981 through June 1984), usually priced at \$2.50, may be purchased for only \$1 with a set of binders.

Due to heavy demand, we suggest you order back issues now while supplies last.

YES. Please send me set(s) of RAINBOW binders at \$13.50 binder set (plus \$2.50 per set for shipping and handling). If your order is to be sent via to a post office box or to another country, please add \$2. Kentucky residents add 5% u.S. currency only, please.	U.S. Mail		
Order one or more sets of binders and take advantage of these exciting offers:			
I also want to take advantage of a special savings of \$1 off the single issue cover price for back issues with the purchase of a set of binders. (Minimum order of 6 magazines. An order form from a recent issue indicating the back issues you wish to receive should accompany this order.)			
I want to purchase the first three-year index to THE RAINBOW (July 1981 through June 1984) a the special price of \$1 (regular price \$2.50) with my purchase of one or more sets of binders.

Your CoCo can help take some of the "gamble" out of your bet

Handicappers Enter Home Stretch with Pace 1

By Pasquale Suppe

The idea of accurately predicting the outcome of future events is a fascinating obsession to many. What will the weather be like on next Tuesday? The Tuesday after that? Who will win the Super Bowl? What will the value of a particular stock be a month or a year or a decade from now? Who will win the Kentucky Derby this year?

Forecasters soon learn that the prediction business is difficult because of the complexities involved and the lack of total knowledge necessary to make

one's model foolproof. Generally, the forecaster's methodology involves the following considerations:

- 1) Determination of which factors to analyze in order to arrive at a sound prediction based on interactions in the "real world" environ-
- 2) Determination of if, where and in what form the raw data needed can be made available to the forecaster in a timely and accurate fashion.
- 3) Determination of the proper algorithm to be used to support the prediction process.
- 4) Determination of how much subjectivity or inference must be allowed to enter into the actual predictions made,
- 5) The creation and maintenance of an adequate feedback system to enable evaluation and/or altera-

tion of the predictive process. This is necessary to enhance its reliability and accuracy in the future,

Two fundamental concepts come into play when attempting to select the most logical horse to play in a given race, First, the relative quality or potential of horses entered and secondly, the form or physical condition of the horses in the race.

Determining Thoroughbred Quality

Class - This measure of the quality of a horse is based upon earnings, level of competition at which he has been successful, or purse sizes where good performances have been noted. Competition levels range from maiden events (non-winners), to claiming contests, to starter events, allowances, handicaps and famous stakes races. Huge differences in ability are to be expected

Pat Suppe is employed by a major insurance company and teaches on a part-time basis at Post College in Waterbury, Connecticut. He holds a master's degree in business administration from the University of Hartford.

when comparing contests at major league ovals such as Santa Anita and Belmont to those runners campaigning at minor tracks and the state fair circuits.

Speed — This can be measured in a variety of fashions, from simple (but ineffective) comparisons of the speed ratings printed in the racing papers to very sophisticated evaluations of the final times run for each commonly run distance. Speed charts are usually used for the generation of a speed rating.

Pace — This method of assessing the relative quality of horse flesh entered in a given event takes into account the time of the horse at an appropriate point of a race. For example, the pace handicapper assesses the ½ mile point of a six furlong (¾ mile) race as well as the final time of the race in measuring quality. A common way of doing this is to assign

a given number of points for a par time and add one point for each $\frac{1}{5}$ of a second the horse beats that time, or subtract one point for each $\frac{1}{5}$ of a second slower than the par time.

Consistency — Consistency handicappers assess quality by evaluating the past frequencies of entrants relative to wins versus total number of starts. They also evaluate in-the-money (first, second or third) finishes versus total races entered. Some practitioners use the lifetime records, some the current year and others only races run during the past several months.

Miscellaneous — There are a variety of other methods to separate the wheat from the chaff. Trip handicapping assesses the relative ease or difficulty encountered during the running of a recent race. This subjective analysis includes allowing for poor judgment of

the jockey, horses being blocked, breaking poorly, etc. Assuming that a similar problem does not occur today, the horse will probably perform better, Other handicappers carefully check the records of the trainers and/or jockeys at particular levels of competition, on surface types (grass vs. dirt), at particular distances, etc., in coming up with their selections. Angle players base their selections on the use of hard-and-fast rules that isolate horses who have shown improvement in running position, speed rating/final times, early speed, frequent recent races, distance switches, jockey switches or favorite in the most recent race among other things.

Most of the methods employed by selectors involve the analysis of one or more of these various attributes. Since most handicappers use manual methods to develop their ratings, many take shortcuts that can decrease the accuracy of the figures produced. Many clerical errors occur that could be avoided through the use of a personal computer equipped with well-designed software. Herein lies the major contribution the personal computer can provide to the art of handicapping: the capability to perform more sophisticated and accurate rating quickly with a dramatic reduction in the error ratio.

Program Purpose

HBRSE'S HAME

Example:

Pace 1 produces a pace/weight adjustment rating for each horse deemed to be worthy of rating in races run at distances of from five furlongs (% of a mile) through the commonly run distances up to one and one-fourth miles.

The algorithm for the total rating is simply the addition of points developed for the fractional and final times, the speed rating and variant plus any appropriate adjustment for weight carried today versus that toted in the ratable гасе.

The arithmetic manner by which the

components are assigned a numeric value are:

- 1) Fractional time Par times of 48 seconds for 1/2 mile (races from five furlongs through seven furlongs), one minute and 121/5 seconds for 3/4 mile (distance of one mile through $1^{3}/_{16}$ miles) and one mile in one minute and 37 seconds (distance of 11/4 miles) are set. Par times are given a value of 100 points. By taking the appropriate fractional time of the ratable race along with the number of lengths the horse was helind the leader at that point, a fractional time for the horse is calculated. This in turn is compared to the appropriate par time and a rating is developed by adding one point for each 1/5 second faster than par or subtracting one point for each 1/5 second slower than par.
- 2) Final time Par times are established for each distance covered by the program. A calculation of the horse's total time to negotiate the distance is developed by adding 1/5 of a second for each length the horse finished behind the winner.

If the horse should win, the final time of the race is used. The final time is compared with the partime for the distance. Par is worth 200 points. Two points are added for each fifth or a second faster than par and two points are subtracted for each fifth slower than par.

- Speed rating— The speed rating is gleaned from the racing newspaper and simply added to the rating. This is a measure of the relative speed of the horse in the ratable race versus track record for that distance. A rating of 100 indicates the horse equaled the track record. One point is deducted for each fifth of a second slower than the record.
- 4) Variant This is a measure of the relative speed of the track on the day the ratable race was run as well as an indirect measure of the quality of the horses who ran that day. One-half of the value of the variant is used in the rating.
- 5) Weight adjustment Many authorities in the field have stated that the weight toted can have an effect on the horse's ability to run at a given time. To adjust for significant increases/reductions in weight to be carried, the program modifies the rating by one point per four pounds change in weight today compared to weight carried in the ratable race for sprint distances (under one mile) and one point per three pounds change for route distances.

13/16 mile	=	11
1¼ mile	=	12

Key in the proper code value one

through 12 and press ENTER. For example, if the ratable race was at a distance of six furlongs, key in 3 and press ENTER.

Fractional Time - Always use the

Examples:

:58 ²/₅ key in 58. 2 and press ENTER 1:12 key in 112 and press ENTER

1:24 3/5 key in 124.3 and press

"Prudence dictates we identify races that are playable and the horses that should be rated."

second fractional time shown in the racing paper (see Exhibit 1). Use the following format to indicate both the fractional and final times:

1) Ignore the colon (:)

2) If any fifths are shown, enter them after a period (.).

Final Time — Enter the final time for the ratable race in the same format as for fractional times.

Lengths Behind Third Call — 1) If the horse was leading at the third call, simply press the ENTER key. 2) If not leading, then type in the lengths behind

full lengths and fractions, as applicable.

a nose (no) = .03 a head (hd) = .06 a neck (nk) = .12 1/4 = .25 1/2 = .5 3/4 = .75

If the horse was behind the leader by:

21/2 lengths - key in 2.5 and press ENTER

11/4 lengths - key in 1.25 and press ENTER

a head - key in .06 and press ENTER

113/4 lengths - key in 11.75 and press ENTER

Note: At 5 and 5½ furlongs the third call is taken at ¾ rather than ½ mile, but for our purposes it is accurate enough.

Length Behind Finish — 1) If the horse won the race, press ENTER. 2) Key in the losing margin using the same format as for the Lengths Behind Third Call.

Weight Carried Ratable — Key in the weight carried and press ENTER.

Speed Rating — Key in the speed rating and press ENTER.

Variant — Key in the variant and press ENTER.

In the event you make an input error, type in 999 at the next prompt and the program re-prompts for the previous input item. In the event you enter a value out of the range edited for, an automatic re-prompt occurs.

Guidelines

Rarely does one encounter a totally versatile horse with the ability to perform strongly at sprint and route distances, and on grass and dirt surfaces, regardless of the level of competition and the location of the track. The vast majority of racehorses prefer to run at a small range of distances, on a particular surface type and among their class peers. Therefore, prudence dictates that we identify types of races that are playable and the horses within those races that should be rated.

Playable races are races run at distances of five furlongs through 1½ miles except for steeplechase/hurdle races and those containing more than two unratable horses. Horses whose past performance chart shows at least one race on today's surface type (grass or dirt) within one furlong of the distance of today's race are ratable. Exception: If today's race is 11/2 miles in length, it can be rated using race(s) of 11/4 miles. The best race to rate is the most recent or the last race that fits the above description, preferably one at today's track. Next, the race where the highest speed rating was earned with the horse finishing with five lengths of the winner. If a clear-cut decision cannot be

challenge of a fast-paced adventure, then this game is for you!

Prepare yourself! The journey ahead of you will surely be perilous. You are hereby forewamed of possible encounters with strange beasts! If you survive these dangers, you must still find the missing idols and attempt to reach the forbidden village. Good luck, you'll need it!

made, rate both of the most recent races and use the higher rating for selection purposes.

Unratable horses are those whose past performance chart fails to show at least one race as outlined above. Naturally, a horse making his first start is unratable.

Risk

In order to avoid unnecessary risk in wagering, this procedure is recommended. Wager on the highest rated horse only if all of the following conditions are met:

- The race contains no more than two unratable horses after scratches.
- The horse's most recent race occurred within the past 20 days.
- 3) The horse was able to finish in-themoney in at least one of his three most recent races on today's surface-type and within one furlong of today's distance.
- 4) The odds offered on the horse are at least two-to-one.

If these stipulations are not met, it is generally smart to pass the race. Experienced players will occasionally find a valid long shot by stretching one or more of the rules and/or playing the second highest rated horse when the top-rated animal can be reasonably eliminated.

If you don't receive RAINBOW ON TAPE or just don't like typing, send \$15 to me at P.O. Box 914, Southington, CT 06489. This program is available only on cassette tape in Extended BASIC. The version 1 send to you will contain some additional features: option for printer instead of screen displays of ratings (sorted by rating), three additional distances and some user-friendly features.

Adjustments

Since the ratings are developed based on the expected weight to be carried, there must be an allowance for change. An adjustment to the rating can be made at the track when the actual impost differs by three pounds for races of one mile or longer or four pounds for sprint events. For route races, add one point for each three pounds less carried and subtract one point for each three pounds more weight carried. For sprints, add one point per four pounds less and subtract one point for each four pounds more.

In Conclusion

The computer used for weather forecasts is a tool that functions only as well as the design and coding of the program(s) dealing with the variables that affect the weather. The handicapper who uses a PC for assistance must keep things in the proper perspective. The personal computer is merely a tool to help with the more difficult and tedious mathematical aspects of handicapping. It is not a miracle machine that generates unlimited wealth.

The potential user of this method of rating is advised to perform a paper workout of the system before using it live to ensure that it has predictive value at your local track.

Outfox Those Narrow Printers with

his program is designed to help those who have narrow carriage dot-matrix printers but who occasionally have need to print wide documents. The program runs without Extended BASIC, but at least 16K of memory is required.

The Rotate program accepts any file that has been saved in ASCII format, and prints it sideways in as many columns with as many spaces between the columns as desired. It prints 50 lines per column.

The graphics characters are written for my printer, which is a Radio Shack DMP-120. The characters are high quality with both upper- and lowercase and real descenders. They are generated on an 8 by 16 dot-matrix grid using the condensed graphics mode (the print codes are listed in Line 150 of Listing 1 and in Line 160 of Listing 4).

The print density is almost identical to that of pica print on a conventional typewriter, allowing 50 lines from top to bottom on an 8½-inch sheet and up to 115 characters across on an I1-inch page. Of course the line length is not limited to one page. By using roll or fanfold paper, lines of up to 255 characters are possible, and by using parallel columns with no space between, the line width can be extended indefinitely.

Listing 3 is a routine to reverse the data in case you have

By John West

John West holds a bachelor's degree in electrical engineering. He has traveled extensively in the United States and Canada as a control systems engineering specialist, but he now works as a full-time pastor for a fundamental denominational church in Durant, Oklahoma. He writes his own software for use in the church.

a printer that has a bottom LS8 instead of the top LS8, which is used on mine.

Listing 2 is a routine to generate a data file to contain the graphics codes for the characters. This saves approximately 4K of memory, which is needed for large documents.

Listing 1 is the main program. It reads a text file that has been saved in ASCII format, then prints it sideways. Listing 4 is the same as Listing 1, except written for a tape-based system.

Type the text using Scripsit and print it to tape or disk, Then run the Rotate program to print it sideways.

The program is written for a 16K Color Computer, but if Extended BASIC is installed in the 16K machine, the command POKE 25,6: NEW must be

entered before loading the *Rotate* program. The disk version (Listing 1) runs on a 32K machine with no special instructions, but for 16K disk, enter PCLEAR1 before loading the *Rotate* program then change the CLEAR statement in Line 80 from 13000 to 8700. The average line length in the text is now limited to 150 characters, but if longer lines are needed, they can be assembled in adjacent columns when the text is saved.

When the program is run, the computer prompts by asking if the text has been saved on tape or disk (if Listing 1 is used), then asks for the filename under which the text has been saved. (Be sure to include the extension if it is not a data file.) It then asks how many

columns are wanted. (If you don't know, use a sufficiently large number to cover the document. The program stops when it runs out of text.) Finally, enter the number of spaces between the columns. When this question has been answered, the text will be read 50 lines at a time then printed sideways.

Since 14 graphics characters are required to form one letter of the alphabet, it takes 14 times as long to print a document sideways as it does to print it in the normal manner.

(Your questions about this program may be directed to Mr. West at P.O. Box 386, Durant, OK 74702, phone 405-924-7024. Please enclose an SASE when writing.)

AINBOWfest is the only computer show exclusively dedlcated to your Tandy Color Computer, Nowhere else will you see as many products, have access to the top experts, or be able to attend free seminars. It's the next best thing to receiving the latest issue of THE RAIN-BOW in your mailbox!

Every RAINBOWfest features many delightful surprises. It's a great opportunity for commercial programmers to show off new and innovative products for the first time. You get the jump on new capabilities for your CoCo. In exhibit after exhibit, there are demonstrations, opportunities to experiment with software and hardware, and special RAIN-

BOWfest prices.

You can set your own pace between visiting exhibits and attending the valuable, free seminars on all aspects of your CoCo - from improving BASIC skills to working with the sophisticated OS-9 operating

Many of the people who write for THE RAINBOW - as well as those who are written about - are there to meet you and answer your questions. You'll also meet lots of other people, just like you, who share your interest in the Color Computer. It's a personto-person event, as well as a tremendous learning experience, in a fun and relaxed atmosphere.

To make it easier for you to partic-

ipate, we schedule RAINBOWfests in three parts of the country, If you missed the fun in Palo Alto, Californla, why don't you make plans now to Join us in Chicago? For members of the family who don't share your affinity for CoCo, you'll be comfortable knowing that RAINBOWfest is located in an area with many other attractions.

The Hyatt Regency-Woodfield offers special rates (\$60, single or double room) for RAINBOWfest. The show opens Friday evening with a session from 7 p.m. to 10 p.m. It's a daytime-only show Saturday -- the GoCo Community Breakfast (separate tickets required) is at 8 a.m., then the exhibit hall opens promptly at 10

a.m. and runs until 6 p.m. Sunday, the exhibit hall opens at 11 a.m. and closes at 4 p.m.

Tickets for RAINBOWfest may be obtained directly from THE RAINBOW. We'll also send you a special reservation form so you can get your special room rate, Come to RAINBOWfest!

Your admission to RAINBO Wfe st also entitles you to visit PCMfest! It's a show focusing on Tandy's new generation of computers — the Tandy 1000, 1200, 2000 and 3000 MS-DOS computers, and the Tandy 100, 200 and 600 portables.

PCMfest is sponsored by our sister publication, PCM, The Personal Computer Magazine for Tandy Computer Users. The show will be in the same location as RAINBOWfest and the exhibit hours will be exactly the same. If you use one of the newer Tandy computers, don't miss it.

Big League **Baseball Stats** For Your League!

If you're a coach, player or baseball fan, you'll love Baseball Statpaki This series of programs will keep track of a team or an entire league, with incredible screen displays and print-

Batter's Scorecard tracks AB, Hits, Runs, Walks, RBI's, HR's, SO's, Errors and On-Base Percentage for up to 180 players! Pitcher's Scorecard tracks Games, IP, Hits, Walks, Runs, SO's and ERA for up to 60 pitchers. Team Scorecard will keep standings for an entire

Lightning-fast machine language sort on any stat makes this an invaluable coaching tool! You've seen these stats for the Big Leagues in your newspaper. Now you can have them for your league, whether it's Little Leauge, High School, College, or Amateur Softballi Baseball Statpak is available on 16K Tape or 32/64K Disk. Extended Basic Required. Only \$34.95, on tape or disk.

Use your Calar Computer to improve your pertormance at the track! Separate 16K programs for Thoroughbred, Harness and Greyhound racing rank the horses or dogs in each race quickly and easily. All the information is readily available from the Racing Form, harness or dog track program.

Thoroughbred factors include speed, distance, past performance, weight, class, jockey's record, beaten favorite and post position. Harness factors include speed, post position, driver's record, breaking tendencies, class, parked-out signs and beaten favorite. Greyhound factors include speed, past performance, maneuvering ability, favorite box, class, kennel record, beaten favorite and breaking ability.

Complete instructions and wagering gulde included. You can buy a more expensive handicapper, but you can't buy a better one! Thoroughbred, Harness or Greyhound Handicappers \$39.95 each on tape or disk. Any two for \$59.95 or all three for \$79.95.

CORRECTIONS

"Receipt Maker and File" (March 1986, Page 22): Bill Tottingham tells us of some needed changes in his program Receipt File. In lines 240, 530, 590, 610, 660, 680 and 950, all D\$'s need to be changed to Q\$'s and all XD\$'s need to be changed to XQ\$'s.

"An Annual Expense Tracking and Management System" (March 1986, Page 122): Eddie Hill has sent us a letter detailing changes to Repigenr that allow printing more than 50 transactions per month.

Add the following line:

11127 I=0

2) Make appropriate changes in the following lines:

11130 I=I+1:GOSUB11900:IFACNO=999THEN1 1140

11140 IF I<>135 THEN 11130 ELSE
PRINT#-2:PRINT#-2,TAB(3
0)"TOTAL ----->
";:PRINT#-2,
USING"\$###,###.##-";TT;:PRINT#-2
:TT=0:CLOSE #1:CLOSE
#2:PSW=0:GOTO11910

3) Finally, the last part of Line 11230 transfers program control to 1123. This should be 11230.

Using Your CoCo for Educational Plans

By Fred B. Scerbo Rainbow Contributing Editor

Editor's Note: If you have an idea for the "Wishing Well," submit it to Fred r/n The Rainbow. Remember, keep your ideas specific, and don't forget that this is Basic. All programs resulting from your wishes are for your use but remain the property of the author.

ne of the more tedious jobs that people purchase a computer for is to try to save the number of steps involved in preparing reports or other written documents. Whether or not you are accustomed to using a word processor for such tasks often makes little difference when one has to go through the actual process of entering information on the keyboard. What is even more upsetting is when friends know you own a computer, they often ask you to help them do some backbreaking task they don't want to do by hand. Computer or no computer, the information still has to be handled and that takes time.

Needless to say, we all want to find

Fred Scerbo is a special needs instructor for the North Adams. Public Schools in North Adams, Massarhusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.

a way to make the maximum use of our limited time. I must confess that I fall into this category. For example, if I am using a word processor to type up something simple like a mailing list that repeats many of the same cities, states and ZIP codes, I often use a simple abbreviation for these items. The abbreviation may only be one or two characters long. Later, I use the FIND/ CHANGE routine of the word processor to run through the text and change my code of NA to North Adams, MA 01247 wherever it is found in the list, 1 also use M/M for Mr. and Mrs. and later use the same procedure to correct the text.

Sound lazy? Sure it is, but that's one of the beauties of using a microcomputer or word processor. You are able to get the maximum product out of the fewest keystrokes, providing, of course, that you have software to suit the purpose.

Anyone who works in business or education knows there are always reports to be filed that must meet the requests of an administrator who has specific objectives in mind. With this need in mind, this month's "Wishing Well" offers a solution to the problem with Objective File,

The Background Setting

Several years ago, the federal government passed a landmark piece of legislation called Public Law 94-142. PL 94-142 was roughly based on a similar piece of legislation that had been in effect in Massachusetts, known as Chapter 766. What both laws deal with is the rights of handicapped students and their parents within a public school system, Both laws have ensured that students with learning disabilities, emotional problems or some other identifiable handicap can receive a free public education tailored to that student's individual needs. The philosophy behind both laws is, "If the child can't learn the way we teach, then we have to teach the way the child learns!"

There is one catch, however. Both laws require that each student served be educated according to a specific educational plan consisting of general and specific behavioral objectives. For those not familiar with this educational jargon, a behavioral objective is a very specific goal that is set and can be measured. To give you some feel for what this is, take a look at these two goals:

 John will earn a grade of 95 on all his addition tests.

 John will learn to respect the values and traditions of his community and society as a whole.

The first objective is a behavioral objective because it can be measured. John either does or does not earn at least a 95 on his tests. You can tell

whether or not you have succeeded with little difficulty. The second objective is a little more complex and in no way easily measurable. How can we tell if John is respecting the values of society? Whose values will we use? What if the standards in his community change? In other words, number two just does not cut it as a behavioral objective.

Let's see if you can tell this with the following examples.

- 1) Sue will correctly measure all the ingredients to prepare eight servings of macaroni and cheese and present the finished product to her classmates.
- 2) Sue will prepare delicious meals for her class.

Which one is a behavioral objective? Number one is, because we can measure the behavior or product. In number two, we would run into a problem with deciding what delicious is.

Although the law requires these objectives to be used, they are still a very controversial issue in education since the objectives and educational plans take a considerable amount of time to prepare. Some argue that the time could be better spent working with the students,

While there are merits to both sides of this argument, the fact remains that these objectives must be prepared. When working with students of very limited abilities, the objectives are easier to write. (Bill will learn to tie both shoes without help.) However, when we get to emotional issues, they may be much harder to write. (Bill will show that he is ready to eat with his classmates by not stabbing his fellow student with a fork.) As you can see, this can be a little tricky.

The Wish

I have dealt with many teachers who prepare objectives such as these for a number of different subjects and naturally they all want a way to make this task easier. Not being the most energetic person in the world myself, I was also looking for ways to make this work load a little lighter.

The result of this wish is the program, Objective File, which works entirely from BAStC with or without a disk drive. In order to use Objective File, you need a line printer of some type. I have written the program to work with any standard 80-character printer. The program prevents word breakup, both on the screen and on the printed copy.

Using the Program

In order to use Objective File, first

realize what it is designed to do. The program does not write your behavioral objectives for you. Instead, it allows the creation of a "cookbook" of objectives that you are likely to use more than once. It allows you to call these objectives either by number or by scanning through the entire file.

Whenever an objective is selected, the name of the student in question is inserted wherever it is needed. Therefore, in order to use this program, the objectives must have been designed in advance. It takes a little time and effort to learn to write objectives without the pronouns him, her, his and hers. This might seem difficult at first but you will be surprised to find that perfectly grammatical sentences can be constructed without them.

If you need to use him or her, you might choose to use him/her. This looks a little too computerized for most

". . . that's one of the beauties of using a microcomputer or word processor. You are able to get the maximum product out of the fewest keystrokes . . ."

people, however. We have to keep in mind that this program is just an aid and not a substitute for creativity in education. Every plan usually requires that I create some new objectives since I am dealing with an individual student and not a machine. When that happens, I just add them to the existing file.

All of the objectives are saved in DATA statements starting with Line 1000. Therefore, when using the program, you do not need to load in any files. At the same time, resave the entire program whenever adding new objectives to the program. In writing an objective for the file, use the name STUDENT whenever the name of the student is to appear in the objective. It is also important that only one objective is put in each DATA line. Another good idea is to wrap each objective in quotation marks. Therefore, one of the objectives might read:

1160 DATA "GIVEN A REVIEW QUIZ IN SDCIAL STUDIES, STUDENT WILL OBTAIN A GRADE OF 70% OR HIGHER."

You may choose to use both upper- and lowercase when typing in the objectives. However, be sure that the name STU-DENT is in all caps.

When the program is run, pressing ENTER gives the three-choice menu. The program prints out a list of all the objectives in the file for later reference by number. Use Option B for this.

If you have a list of the objectives on file and know which numbers you want, choose Option A to select objectives. Entering the number of the objective wanted causes it to appear on the sereen. If the objective is not the correct one, select another.

Using Option C, scan objectives, allows flipping through all the objectives one at a time and selecting the ones wanted. If you do not select any, or press '@', you are returned to the appropriate menu. Entering no number when in the select mode also returns you to the appropriate menu.

In either case, if the objective is the correct one, you are asked which quarters you want checked. PL 94-142 and CH. 766 require that objectives be addressed during a given semester or quarter of the year. Using either 'Y' or 'N' indicates in which quarters the objective is to be addressed. If, for some reason, you do not want to include this section, delete lines 200-220 and 360-375. They will appear on neither the screen nor the printed copy. The final question asked is:

IS THIS CORRECT (Y/N)?

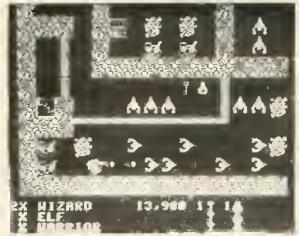

This gives one last chance to make any corrections. Pressing 'N' completely strikes that objective and lets another be chosen. Again, if you want to stop, simply press ENTER when asked for a number in Option A or say no to ANOTHER COPY Y/N? or press '@' when in Option C.

Printing Your Objectives

Once all the objectives are selected, whether it is with Option A or C, proceed to the printing of the objectives. Enter the student's first name and then the student's last name. Be sure the line printer is turned on and loaded with paper. The program prints out a list of the objectives that were selected with the student's name substituted at the appropriate places. The quarters the

BIEGER BEBRUSTS

GANTELET

One, two or even three people can play Gantelet at the same time. You and your friends travel through the many levels in search of an exit to the next level. Avoid the Ghosts and other creatures that are out to stop you in your quest. Collect keys to open doors, treasures and magic potions to aid

you frantically search for the exit to the next level.

ARK ROYAL GAMES

Prices on all programs include shipping to U.S., APO's, Canada, COD's (USA only) add 10%. Florida Residents add 5%. For disk version add 52. All Orders shipped within 24 hours. Programs require Color Computer TM (Tandy Corp.) or TDP System 100 Computer TM (RCA). Many programs soon to be available on MS-DOS systems.

P. O. Box 14806 Jacksonville, FL 32238 (904) 786-8603 objectives are to be addressed are printed below each objective. The program pauses after each objective, awaiting a response and allows printing of extra copies if needed.

Keep in mind that the form printed by this program does not constitute an approved Individual Educational Plan or IEP as required by federal law, An IEP is a very specific document and the specific behavioral objectives in the IEP are only one part of a very complex document. An IEP often contains testing information, psychological reports and observations, medical information, general goals, and teaching materials and methodologies. Most school systems have a clerical aide who must prepare all this information from up to a dazen different individuals in one document. A program like this can save a lot of time for an instructor who might have to submit pages of handwritten objectives to a central office aide,

Granted, there are some software

packages available that write entire IEPs with a microcomputer, but the ones I have seen have been too limited in their flexibility to deal with the complex planning for an individual student. Using a program such as this simply helps speed up the process without taking over the entire process.

Does all this work with objectives seem like a paper chase? Well, welcome to one of the most controversial issues in education today. Still, if a program like this can help an educator spend more time with students while meeting the letter of the law, then great.

Other Uses

Objective File need not be used just by special educators. Any teacher can use the program to generate objectives for entire classes as well. Simply enter THE CLASS as the student's first name and nothing as the last name.

Business executives who wish to file objectives can make changes in some of

the headings such as STUDENT NAME by altering the program as needed. (See the deletions mentioned carlier.) You can change the string name STUDENT in Line 280 to any term wanted (i.e., INDIVIDUAL, EXECUTIVE, COMPANY, etc.). You may then substitute these in the objectives written for the DATA statements. Keep in mind that the form printed will not be the final copy, but a listing of objectives for a typist to incorporate into a larger document. You be the judge of how it is used.

Conclusion

While this month's program may not be applicable to a large number of you, I think the structure behind it is worth examining. It is a real timesaver to some in education. More importantly, though, is the fact that it shows you can accomplish some amazing things in BASIC if you really put your mind to

Teaching Children Time Concepts

By Steve Blyn Rainbow Contributing Editor

It's 9:15 a.m. The postman has just delivered your latest copy of THE RAINBOW magazine. Of course, you immediately begin to read it. If you read continuously for the next two hours and 15 minutes, what is the new time?

This month's article and program deal with problems demonstrated by the paragraph above. This type of math verbal problem deals only with time changes. These problems are generally taught and mastered in grades five through seven.

Before beginning these kinds of problems, students must have a clear understanding of telling time. The student should understand that there are two sets of 12 hours in each day and that 60 minutes comprise each hour. This knowledge is a necessary prerequisite to solving these problems. The a.m. and p.m. concepts should also have been taught.

A good approach to mastering any type of verbal problem is to begin from the easy and proceed to the more complex. Using only hours is a good start.

Steve Blyn teaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.

If it is 5:00 now, what time will it be in two, four or six hours? A play clock with movable hands is useful to many students. If this is unavailable, a watch or wall clock can be used.

The first truly difficult part of this concept comes when we give a problem that goes past 12:00 to 1:00. Children are used to thinking in terms of base 10. Their natural inclination is to advance or carry or do some alteration when reaching the number 10 rather than 12. Using a real or play clock helps in understanding the truth of the clock's mathematics.

The next step could be to give problems using minutes in half of them. Such as: If Mr. Brown left New York in his ear at 2:00 and traveled for three hours and 20 minutes, at what time did he stop driving? If Sally began practicing piano at 3:45 and practiced for two hours, when did she stop practicing?

Gradually introduce problems that go beyond 12:00. Intersperse them with casier problems that remain within one 12-hour clock span. We don't want to overwhelm students who may have difficulty mastering this one part of the concept.

Next we can use minutes in both parts of the problem. The problem that began this article is one of this type. These are the type of problems used in *Newtime*, our program this month. Additionally.

I have chosen to limit all of the program's problems to five-minute rather than one-minute intervals.

For example, the program will not choose a time such as 3:18 — either 3:15 or 3:20 is used. I did this as sort of a middle ground of difficulty. We wanted the level of this program to serve the greatest amount of students. You may, of course, alter the program to not include this rounding off feature by removing the *5 on lines 100 and 120.

A final step in the learning of this concept is to work backwards in time, We did not choose to include this in our program because it is really a more difficult aspect than we cared to pursue. It would ask questions such as: If Mr. Falk drove his car for three and one-half hours until 4:15, what time did he begin his trip?

These problems require a greater degree of conceptualization on the part of the student. If your child is ready for it, however, go right ahead and challenge his learning powers.

The program randomly chooses a current hour and minute. The minutes are always intervals of five. The current time is chosen on lines 90 and 100 as variables 'A' and 'B'. The amount of time to pass is randomly chosen on lines 110-120 as variables 'C' and 'D'. The student is asked to tell the new time.

The new time is represented by var-

iables 'E' and 'F'. They are the sum of A plus C and B plus D with corrections for "time arithmetie" taken into account. By this we mean that every 60-minute interval must be converted into one additional hour and the hours must be converted to their true values when the sum of hours passes 12. Variables 'E' and 'F' take these factors into account on lines 200-230.

The student's answer is represented by G\$ and H\$. These strings are converted to 'G' and 'H'. The reason we use G\$ to get the answer rather than 'G' is for programming ease. For example, using LINEINPUT G\$ on Line 260 rather than INPUT G allows for greater variety of students' answers without accidentally or purposely changing the screen.

The answer is considered correct if the values for 'G' and 'H' match those of 'E' and 'F'. The program compares these values and prints either a "correct" or a "sorry" response on lines 310-320. Lines 330-350 correctly print out the new time.

The program presents 10 problems in

each round. The child is told whether he is correct after each response and the correct answer is displayed at the bottom of the screen for extra reinforcement. A report card is given after each group of 10 problems. The child or the next student is then free to begin again.

We at Computer Island hope this program helps your child or students. Please feel free to alter the program in any way that will better help them. By changing the ranges of the various random numbers, you can make this an easier or more difficult program.

Education Texas Style

By Michael Plog, Ph.D. Rainbow Contributing Editor

hen most of us think of Texas, a few standard images come to mind. The landscape is barren, dusty and dry. Oversized hats fit on oversized people who fit on oversized horses. Maybe most important to the people reading this, Tandy Company is there and our Color Computers (yours and mine) were designed, if not totally made, in that larger-than-life state.

Texas, however, has some other features that directly affect education throughout the country. Texas, along with a few other states, controls much of the content of the textbooks that educational publishers distribute to the entire country. The reason for this is the Texas Education Agency, the state education department, maintains lists of approved textbooks. All districts in

Michael Plog received his doctorate degree from the University of Illinois. He has taught social studies in high school, worked in a central office of a school district and currently is employed at the Illinois State Board of Education.

Texas must purchase their textbooks based on this list. Curriculum for each content area is determined by the Texas Education Agency, and specifications for textbooks are provided to publishers who want to be on the list. And publishers do indeed want to be on the list. Texas has 1100 school districts and millions of dollars to spend for books. A publisher wanting to sell a textbook in Texas must insure that it conforms to the state-determined specifications.

Therefore, the rest of the country must live with texts tailored for Texas and a few other large states like California, which also have approved lists of textbooks. Nationwide, the market for computer literacy textbooks may be as much as \$40 or \$50 million. It's no wonder publishers are so anxious to please the Texas consumer.

A few years ago, Texas examined its entire school curriculum. Part of that examination dealt with computer literacy. The Texas state legislature mandated that all students must pass a one-semester computer literacy course before entering the ninth grade. This mandate went into effect in the 1985-86

school year that is just now ending.

The Texas Education Agency went about determining the curriculum in an appropriate manner. They spent a year and a half considering the issues. Testimony was heard from experts in the field, as well as non-experts. The result is a definition of the essential elements of a computer literacy course.

The new law states that textbooks must provide materials to help students use computers for problem-solving purposes. The emphasis is placed on the role of tool applications; word processing, database management and spreadsheet programs. Less importance is placed on learning a computer language, but BASIC is sanctioned over other languages.

According to reports from publishers, this step by Texas is appreciated. Publishers and authors had viewed the computer textbook field with some hesitation. Computer books generally have an extremely short shelf life. New software, hardware and applications make a computer book outdated soon after publication. This publishing nightmare has eased somewhat during the

past few years, but the life span of a computer book is still shorter than for other curriculum areas. The Texas law changes that short shelf life problem to some degree. Innovations in hardware and software may be fine for the business consumer, but eighth-grade students in Texas will continue to learn tool applications for computer literacy.

By the way, 13 textbook publishers wanted to he on the approved list for Texas. Five or six (I am not sure of the exact number) are approved. Each approved textbook has about the same content as the others. Very few differenees exist from book to book. That may be expected, with the Texas law guiding the course of study. Every book has a section on BASIC; none have anything on LOGO or PASCAL. All address the issues and topics provided in the Texas law.

Because of the length of time it takes to put a book on the market, most Texas classrooms have no computer textbooks this year. That should change next year when schools have a chance to purchase books over the summer.

The end result of all this is that Texas has assumed a leadership role in school

computer literacy. That isn't surprising, since Texas is also the place where the Color Computer originated, Leadership may come easy to those oversized people wearing oversized hats. My feelings about the actions of Texas, however, are mixed.

In general, the decisions made by the Texas Education Agency match my own personal preferences. Programming a computer is not as important as knowing an application to solve a problem. Viewing the computer as a tool is the most appropriate way to approach computer literacy. If a student does want to learn programming, BASIC is probably the best language to learn simply because the machine comes with BASIC already sitting in ROM. Thus, I think Texas made the correct decisions about curriculum emphasis and approach to learning.

My difficulty with the Texas action involves diversity of curriculum. It is true that too much diversity can be harmful to a field of learning. A content area needs to have an accepted core of knowledge that people can understand as the basic components. My difficulty is that with an established, state-wide

curriculum, diversity is not simply reduced, it is eliminated.

Some diversity in curriculum is a positive feature for a field of study. A list of approved textbooks and established curriculum stifles creativity and expansion of knowledge in a subject area. It becomes difficult for new information to enter the field. Once a curriculum becomes institutionalized it is hard to change.

Some consistency of course content is necessary in any field of study, but there should be room for diversity too. While I agree with the decisions of direction made by the Texas Education Agency, I would prefer to see a wider variety of content in the textbooks,

Good teachers do not rely solely on textbooks as instructional materials for students. The actions by Texas, however, will make it more difficult for teachers to find additional materials for their classes,

Your thoughts, opinions and ideas about my comments are always welcome. You can contact me at 829 Evergreen, Chatham, IL 62629. Hope to see you at RAINBOWfest in Chicago.

Just Controller \$99, with CDOS to \$195, with ALL options

OWL-WARE PA (215) 682-6855 P.O. Box 116-D

We stock Single Sided Drives, but at the Current Prices why not **BUY Double Sided???**

BUNDLE: DISK TUTORIAL OWL-WARE SOFTWARE

2 UTILITIES 2 GAMES

DISK TUTOR

PROGRAM. THE TUTOR TAKES YOU STEP LESSON TUTORIAL THAT WILL GIVE YOU TUTOR IS EASILY WORTH THE BUNDLE'S BASIC (THIS PROFESSIONALLY WRITTEN OUICK, PAINLESS KNOWLEDGE OF DISK LEARN EVERYTHING ABOUT DISK BASIC BY STEP THROUGH THE LESSONS AND FROM THIS MACHINE LANGUAGE CORRECTS YOUR MISTAKES TOTAL PRICE)

OWL DOS

25% FASTER DISK ACCESS AND ALLOWS USE OF DOUBLE SIDED DRIVES. CORRECTS FLOATING POINT NUMBER AN OPERATING SYSTEM THAT GIVES

COPY-II

Disk Drive

Software Bundled Special

with

OUICKLY COPIES SELECTED PROGRAMS PROGRAMS FOR COPY (NOT FOR PRO-FROM DISK. USE WILD CARD OPTION SEARCH TO SELECT GROUPS OF TECTED PROGRAMS)

2 GAMES

BOTH HAVE SOLD FOR OVER \$17. EACH, IF SOLD SEPARATELY OVER 2 GAMES FROM OUR STOCK.

S125.00 WORTH OF SOFTWARE!!! (or even better) only \$24.95!!!

\$4.95 with

DISK DRIVE PURCHASE!!!

RAINBOW

Give us your best: Join the ranks of these courageous CoCoists in showing the Color Computer world your high score at your favorite micro-diversion. We want to put your best effort on record in THE RAINBOW's "Scoreboard" column. All entries must be received 60 days prior to publication. Entries should be printed — legibly — and must include your full name, address, game title, company name and, of course, your high score. Each individual is limited to three score entries per month. Send your entries to Scoreboard, c/o THE RAINBOW. The "Rainbow Scoreboard" is now a bimonthly feature.

For greater convenience, your high scores may also be sent to us through the MAIL section of our new Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS.

SCOREBOARD POINTERS

*Sorrya Hursi, Richmond, CA

In conjunction with THE RAINBOW's Scoreboard, we offer this column of pointers for our game-playing readers' benefit. If you have some interesting hints and lips, we encourage you to share them by sending them to the Scoreboard, c/o THE BAINBOW.

FEEDBACK

Svoveboard:

In response to Jon Olson's letter (December 1985), here is some help with Dallas Quest, When you get to the trading post and bribe the monkey, you should proceed with the following moves: DRDP ALL, GET KNAP SACK, GET MIRROR, DROP MIRROR IN KNAP

May 1986

SACK (do the same with the pouch, photo and the ring), DROP KNAPSACK, PULL CUR TAIN, GET FLASHLIGHT, CLIMB LADDER. LIGHT FLASHLIGHT and DROP FLASHLIGHT.

Then, to get to the crossroads, you must: GO EAST, GO SOUTH, GET KNAP, CLIMB LADDER, GET FLASHLIGHT, GO WEST, UN LIGHT FLASHLIGHT (you will need it later), GET PHOTO and SHOW PHOTO.

Next, the Indians take you to the crossroads. (You might want to get the ecconuts, and pick the road to the west - Feat of Courage — which can be solved.)

*Scott Bellman, Bellendorf, IA

David Rodriguez Columbus, OH

Scoreboard:

125

In response to Ric Miller's letter concern-

ing Straight (December 1985), when you get the light saber, go to where Darth Vader is and type PRESS SHITCH, When Darth Vader appears in front of you, hit him at the end of his light saber, which is closest to him. Keep hitting him there and he soon flees.

Also, anyone with information on how to get out of the vault in Syzygy please write

to the "Scoreboard."

Eric Bly Taber, Alberta

Scoreboard:

In response to Gordon Rock's letter (January 1986) concerning *The Arcoulax Assignment*, to kill the moth you need to buy the mothballs at the store. To do this, you need the money, which is down in the sewer, or drain hole. To reach the money you need the gum and the pine branch. The pine branch is behind the bureau. Type MOVE BUREAU and this will solve all your problems.

Also, if anyone has any tips on Madness and the Minotaur, especially how to get out of the maze, I need it, I'm always lost in the maze, trying to get the things that are needed, and my lamp goes out. If anyone has any information please write to the "Scoreboard"

Ed Westberg Jewen Beach, FL

Scorehoard:

In response to Albert Kruegel and Ray Suryla's letters (January 1986) concerning Maduess and the Minotaur, to get the first spell, you need the basket and the mushroom. Take them to the Air of Enchantment on the first level. When you get Vetar (the first spell) it tells what you need for the next spell.

To use a spell, just type the name of it. Do not move if you lose your lamp — just type VETAR (if you have the spell) and the lamp

returns automatically.

Finally, to map the maze get some halfinch graph paper. In a block, put a number for the first room. From that block put dashes to the ways you can leave the room. On a blank piece of paper, put the corresponding number and a description of the room.

I would like to know how to kill the wizard in *Dungeons of Daggorath* and how many levels there are in the game.

Donald Dave Pittsfield, PA

Scoreboard:

In response to Tim McCarty's question [January 1986] about how to get past the Worm Master in the Adventure game To Preserve Quandic, I have a solution. You mist go back to the Picture Room, which is right below the room with the eyes in it. Then you must go west to the room with the sign reading "You're Almost There." Next, go north and you will see a box. Type SEARCH BOX and get the "machine." After

that, type ENTER BOX. Now try going to the Worm Master.

Ryau Smüh Placerville, CA

Scorehoard;

Concerning Fred Turner's question (January 1986), when you are in the Pyramid of Calixto Island, go through the crevice and go south, east, east and south. Make sure you have the mice from the shed to feed to the snake so you can get the paddles. To get out, go north, west, west and north.

J&P Via Caacstoga, PA

A WORD ABOUT ADVENTURES

Scocebaard:

Saudy of Egypt, by Radio Shack, is well thought out and humorous, with excellent graphics. It has one glaring defect in the program, though. It counts loading the game as one move. Load the game and type SCORE. The screen says you have used one move, Save the game at that point and then reload that saved game. Now you have used two moves, As many times as you use the "Save-Load" sequence, that's how many moves you add to your final score. Very depressing when one is shooting for a low score in an Adventure game.

Another point about graphics Adventure games in general is that all the games I have played (Mark Data, Tom Mix, Computerware, etc.) display a congratulatory screen at the end of the game that tells your score. Unless you see that congratulatory screen, the game isn't over and you still have more Adventuring to do. In Sands of Egypt, for instance, I can get into the treasure room in 76 moves. That isn't the end of the game, though. It takes 89 moves to get the treasure back to civilization and complete the game. I would suggest that wherever possible, use the score displayed on that screen when submitting scores to the "Scoreboard."

Roy D. Grant Taledo, OH

INSIGHT TO NEW SOFTWARE

Scarehourd:

I recently purchased Zork I, by Infocom, and I must say I am really impressed. I would highly recommend this game to "Adventure nuts," Here are some tips.

To get into the house, type OPEN WINDOW when you find the one that is "slightly ajar," To enter the Great Underground Empire, type MOVE RUG while in the living room. To return to the light of day, go to the studio and type GO UP CHIMNEY.

Kurate, by Diccom, is indeed a challenging game. Always remember that you have

quite a few attack options. Don't favor any techniques, since the opponents will eateh on and turn them against you. One good strategy is to flip over the apponent and attack from behind. If you do this quick enough he will not have a chance to react. Also, let your apponent come to you sometimes; don't always charge him.

Enchance, by Infocom, is a very exciting game. If the game says that you are becoming hungry, thirsty or tired, then listen! It is important and you must fulfill your need to eat, sleep or drink. If you search the dungeon earefully, you can find a secret passage that helps your game. And one more: make maps. This is infinitely helpful in all Adventures.

How do I inflate the raft and use it? Is there a way to kill the dreaded Third?

Can I enter the temple in Enchanter! Can anyone tell me how to get anywhere in The Martian Crypt or Oumberse?

If anyone can help me out, let me know through the "Seoreboard."

Scott Bellnaa Bettendacf, IA

HITCHHIKING THROUGH THE GALAXY

Scorelaard:

I recently received Infocum's Adventure, the Hitchtikee's Guide to the Galaxy, and have a few comments and hints for the game. First of all, the loading instructions are wrong. To load it, type DDS and press enter, not RUN"GAME". Also, to SCRIPT at 9,600 Baud, type PDKE 150,1 hefore loading. Other Baud rates can also be poked.

Here are a few hints for other new players. The only thing I know of that you need from Earth is the junk mail and towel. To stop the buildozer, you must BLOCK it. Don't take the towel until you get past the buildozer.

When you are in "dark," read the room description every time it is printed.

To get the Babel fish, you need four other items. When the upper-half-of-the-room cleaning robot takes the fish, carefully read what it says in the parentheses.

Does anyone know how to get past the screening door on the Heart of Gold's

Michael Fixehoc Great River, NY

RADIATION TREATMENT

Seocchoard:

Here's a tip on the game Shock Tecoper, by Mark Data Products. At the end of each level, before going into the decontamination chamber, hold the trigger down until you are just about to hurn up from too much radi-

arjun, Then enter the chamber; by doing

this, you get extra points.

If you are un the level with the spiders and there are too many of them, move off the screen and then back on they should disappear.

Fruber Malcom Culpeper, VA

STICK IT TO THE KING

Scorebourd:

In Hall of the King, try to light the stick after you have been in the dumb waiter. The strong updraft dries the stick out. Use the stick to burn the fermenting grain. Then, put the stick in the turch hulder. The rest is up in you!

In Sands of Egypt, after you have found the treasure, ride the camel past the Pyr-

antid.

Chris Hutchinson Flurence, SC

BONUS IS BETTER THAN TREASURE

Scoreboard:

Here are some helpful hints for people desiring high scores on Tut's Tamb by Mark Data.

Do not wait around on any screen trying lo get treasure go for your bonns.

On Screen 8, head for the top right-hand corner first and wait until they jam themselves at the top left-hand corner.

On Screen 10, always wait patiently on both sides of this chamber and do not take the treasure first.

On Sereen 6 (this is the hig puzzle), just make it quick and hope for the best.

I hope these lints help.

Robert Wright North Queensland, Australia

WANTED: REAL ACTION

Scorebourde

After getting killed in #Par of the Portds, by Triad Pietures Curp., for the 50th time, I would like to know how you get in the jeep and, if so, in which direction do you go? Also, how do you get out of the forest and into some real action? The furthest I can ger is to the logging camp and past a few other minor obstacles.

> Peter Thorpe III Missouri City, TX

TECHNIQUE FOR ONE-ON-ONE

Scorebuard:

I have a helpful tip for those with Oneon One by Radio Shack. I have found a way to hold the computer virtually scoreless.

The first thing you must do is set the parameters and choose Pro, Computer vs. Larry Bird, Eight-Minute Quarters and Winner's Outs, When you get the ball at the top of the key, put the joystick in the upper left-hand corner and shoot the ball at the same time. Dr. J jumps up and tries to block your shot. Sometimes he succeeds, but most of the time you get the shot through.

As soon as you hit the floor, put the joystick in the upper right-hand corner to cut back in front of Dr. J. If you make it, that's two points; you get the ball back and you can do the same thing again. If you miss the first shot, simply rebound the ball and go in for a slam dunk. If you execute this move properly, Dr. ,I shouldn't score more than 10 or 20 points in an eight-minute quarter game.

I have also noted a couple of things about the game. First, I noticed that Larry Bird is a much better player than Dr. J. He makes more putside shots and close shots than Dr. J. The second thing is that your fatigue bar has no effect on the technique I explained above. You don't have to call a timeout because Dr. J. always calls one first.

Also, pressing 'S' while playing the game slinws the shadow of the ball. Pressing ENTER pauses the game until you hit ENTER again. The BREAK key aborts the game.

Brian Biggs Galloway, OH

SUBSTANTIAL BONUS

Scoreboard:

Here are my suggestions for Tom Mix's The Ring rivel level. Go to the top heam on the left or right and get the rivet. Jump up as the fire nears the hole where the rivet was and you'll get a 100 to 900 point bonns.

Also, for Dragon Slaver, when entering a room for the first time, hit ENTER so you can see what you need in order to continue, Then, hit an arrow key to move again.

I lrope this helps!

William Futer Bridgeton, N.J.

MAKE A RUN FOR IT

Scorebuard:

Have a couple of tips for those who own the game Color Baseball by Radio Shaek, (They work best when you play against the

computer.)

First, when you are pitching, throw the ball to the catcher before the batter gets on the plate. Then, move the catcher right next to the pitcher and throw the ball to him. Next, throw the ball back to the catcher fast, and that will be a strike.

The next tip works when you have a runner for your own team on third base. Wait until the batter gets to the batting plate, then make your third baseman steal home. The pitcher won't throw the ball to home until your runner is in. When he does throw to home, simply hit the ball,

I need help on Sands of Egypt and Pyramid. If anyone can help, just write to the

"Scoreboard,"

Andrew Last Waterloo, Ontario

JUMPING THE PIT

Scoreboard:

While playing Madness and the Minotaur, I have found that I cannot get out of the maze. When I get to the room with the small pit in the corner, I type JUMP PIT. But, all it says is "JUMP WHAT?" I have tried dropping everything and also typing JUMP SMALL PIT, JUMP OVER SMALL PIT, etc., but nothing works. If you have any suggestions, please write to the "Scoreboard."

Dan Franzen Westlake, OH

Editor's Note: Try this: When you get the response "JUMP WHAT?" just type PIT.

To respond to other readers' inquiries and requests for assistance, reply to "Scoreboard Pointers," c/o THE RAINBOW, P.O. Box 385, Prospect, KY 40059. We will immediately forward your letter to the original respondent and, just as importantly, we'll share your reply with all "Scoreboard" readers in an upcoming issue.

For greater convenience, "Scoreboard Pointers" and requests for assistance may also be sent to us through the MAIL section of our new Delphi CoCo SIG, From the CnCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS.

PRICKLY-PEAR SOFTWARE

QUALITY PROGRAMS FOR YOUR COCO & TDP-100

PROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTHERWISE NOTED.

This program combines all the things you took for in a great two disk graphics adventure program. The Hi-Res graphics are superbly done. The text portion of the screen and the graphics change quickly as you move through the HALL OF THE KING. You can move freely from one portion of the adventure to another. Call up your inventory at any time, You can even save or load a game at ANY time, HALL OF THE KING will challenge even the most seasoned adventurer.

HALL OF THE KING requires 64K EB and one disk drive. This exciting two disk adventure comes packaged in a vinyl case \$39.95

HALL OF THE KING II - THE INNER CHAMBER

Continue your quest for the Earthstone in The Inner Chembers of the HALL OF THE KING. Outstanding graphics help show the way to success in your search to help restore the legendary power of the Earthstone to the dwarven race. The deeper you travel into the inner chambers, the more difficult your progress becomes, HALL OF THE KING II has all the tine feature of the first adventure. It is designed to follow the original HALL OF THE KING but may be played as a stand-alone edventure. The adventure fills two disks and comes packaged in a handsome vinyl folder. It requires one disk drive and 64K, \$39.9S

WARP FACTOR X

If you have been waiting for a game for your color computer that has everything, your wait is over, **WARP FACTOR X** is here. This all graphics simulation game requires strategy, fast thinking, an eye for detail, and above all experience in knowing the capabilities of your starship and its computer. (See review in Feb. 85 issue of Rainbow.) It requires 32K one disk drive and comes packaged in a vinyl library case, **\$34.9S**

DARKMOOR HOLD

You and your comrades will explore the levels of Oarkmoor Hold In an effort to gain great riches and defeat the dark wizard. The Wizard will soon realize the threat you pose and the many monsters you meet and battle will become stronger and more powerful as you move through the 10 levels of Darkmoor, A keen eye will help you find weapons and armorto aid your battle along with treasures for you to keep. Your party consists of a Dwarf, an Elf, and you, the Human, each with their own special attributes. The weapons, armor and treasure are placed randomly in each level to provide a new challenge each time you play. You may also save the game you are playing since defeating the evil Wizard is not an easy task. It has great graphics and an impressive text screen to give you more fun than a barrel of elves. Requires 64KEB and 1 disk drive, \$29.9S

DRAGONBLADE

DRAGON BLADE Animated Graphics Adventure

This 100% hi-res graphics adventure features many animated screens which will delight the avid adventurer. You search for the magic Blade which is the only way to rid your homeland of the tearsome dragon which has risen from a long rest to terrorize your village. Fill your screen with super graphics as your try to solve the difficult challenge the village leaders have set before you. Dragon Blade requiries 64K Extended Basic and 1 disk drive. \$29.95

UTILITIES

Microartist — Ver. 2.1 — see the review in the Dec. 85 issue of Rainbow. Req. 32k and joystick. **TAPE** — **\$24.9S OISK** — **\$29.9S**

Oiek Zepper — Ver. 1.8. The best, Edit and examine disks directly, use up to 40 tracks full copy utility allows easy transfer of files from disk to disk, format any number of tracks, and lots more. \$29.95

Oracle 11 — The ultimate monitor, \$29.95

RTO Trio — Take advantage of this special offer. This package of three utility programs includes our new DISK TO TAPE, TAPE TO DISK (version 2.0), and ROMFREE (version 2.0). TAPE TO DISK moves BASIC, ML and DATA files from tape to disk automatically — one program or an entire tape, it even fixes those progrems that load at hex 600 so they work on a disk system. ROMFREE moves ROM packs to tape or disk easily, end fixes them so you just load and EXEC, ROMFREE now accommodates the larger 16K ROM packs, You won't believe how easy it is to protect your software library! These programs are shipped on tape. Requires 16K. \$49.9S (\$24.9S each if purchased separately)

Prickly Peer Mallist — Ver. 2.0 — You won't find a mailing list program anywhere that will out perform this one, Req. 32K and one disk drive, Only **\$29.95**

POLICY ON PROTECTION — We believe our customers are honest — all of our software can be backed up using standard back-up procedures.

Your personal check is welcome — no delay. Include \$1.50 shipping for each order. AZ residents add 5% sales tax. Orders shipped within two days.

Dealer and author inquiries are always welcome. Canadian dealers should contact Kelly Software Distributors, Ltd., P.O. Box 11932, Edmonton, Alberta T5J-3L1 (403) 421-8003.

The art of entertainment

Pinball Factory by Kary McFadden

The video game comes full circle in this glorious tribute to the original. Classic pinball spings to life as never before, with fresh new angles that only the computer can offer. Crisp graphics, sound, and fast, smooth action give this machine-language arcade game a realistic, responsive feel you'll hardly believe. There are even "tilt" buttons that let you "bump" the machine!

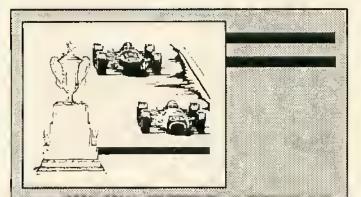

In addition to playing a great game of pinball, you can enjoy hours of creative pleasure as you design, build, and edit your own screens. Save and load your favorite creations. The joystick-controlled cursor makes it all easy.

Change the board: build with bumpers, tabs, and a multitude of solid obstacles to form any configuration imaginable.

Change the face: draw your own title board with lines, rays, and shape patterns. Add text in three different colors, and two different sizes.

Change the rules: alter the gravity, bounce, and scoring!

64K Color Computer required. \$34.95

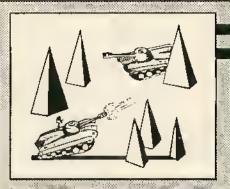

Speed Racer by Steven Hirsch

The checkered flag drops as your pulse rises in this lively new arcade game. The road twists to the horizon on the 3-D panorama that sets the stage for the most exciting race the CoCo has ever seen!

Vie for time as you speed through the curves at incredible speeds. Step through the gears to stay ahead of the pack, but step lively since some will stop at nothing to see the end of the race, or the end of you!

Four challenging raceways, complete with obstacles and colorful 3-D scenery, put your skills to the test in this Pole Position™ type game.

32K Color Computer required. \$34.95

Rommel 3-D by Kary McFadden

You clutch the tank controls, searching for any sign of the enemy. Suddenly a blip appears on radar! Frantically, you move your tank into position. At last you spot the clusive enemy tank! Facing it, you race to lock sights and fire before he does!

Enter the ultimate battle-zone in this exciting 3-D tank combat game. Strategy, speed, and your tank's cannon are your only hope as you wind through a three-dimensional course inhabited by impenetrable barriers and enemy tanks.

Dazzling graphics and lifelike sound take you a step beyond the ordinary in this fast, machine-language arcade game. Enter the next dimension, ROMMEL'S troops are waiting for you!

32K Color Computer required. \$29.95

To achieve maximum productivity with your Color Computer, you have to make it as easy as possible to get information into and out of the system.

This is why we developed the HJL family of high-performance enhancements for ALL MODELS of the Color Computer.

The Keyboard - \$79.95

The overwhelming favorite of serious Color Computer users worldwide, the HJL-57 keyboard has the smooth, consistent feel and reliability you need for maximum speed with minimum input errors, includes 4 Function Keys and sample function key progrem, installs in just a few minutes with no soldering.

The Numeric Keypad - \$89.95

The NumberJack is a self-contained, cable-connected keypad for heavy-duty number-crunchers. Besides the number keys, it hae all the cursors, symbols and math keye, including autoshifted (one-touch) ADD and MULTIPLY. Comes complete with 3-foot cable and all necessary connectors for quick and easy installation without soldering.

The Monitor Adapter - \$25.95

This universal driver works with all monochrome monitors, and is easily installed without clips, jumpers or soldering (except in some later CoCo 2s with soldered-in video chips). Here's criep, clear, flicker-free monitor output with all the reliability you've come to expect from HJŁ Products.

The Monitor - \$89.95

The GoldStar high-resolution amber monitor brings you the monochrome display that's preferred by most computer professionale today. Once you've used it you'll never connect your computer to a TV set again. The 12-inch diagonal CRT has an etched non-glare faceplate. (Requires adapter sold below)

The BASIC Utility - \$25.95

Quick Basic Plus, a high-performance programming utility, can be used with any color computer that has four function keys. 26 pre-defined BASiC statements, 10 user-defined macros at a time (you can save as many sets of macros as you like), automatic linenumbering, word wrap, global search,

and instant screen dump to printer, make this eoftware the BASIC programmer's dream come true. Comes with re-legendable 3-way reference chart. Specify disk or cassette.

The HJL Warranty

Every HJL product comes with a full, one-year warranty and the exclusive HJL 15-day unconditional guarantee (except software).

Pick a Pair & Save 15%

Now, for a limited time, we'll give you 15% off the price of any two or more products shown here. Just mention this ad when you order.

PRODUCTS

Div. of Touchstone Technology Inc.

955 Buffalo Road • P.O. Box 24954 Rochester, New York 14624

Ordering Information: Specily model (Original, Fiversion, or CoCo 2 Model Number). Payment by C.O.D., check, MasterCard, or Viss. Credit card customers include complete card number and expiretion date, Add \$2,00 for shipping, 3.50 to Canada; except monitors (call for shipping charges before ordering monitors). New York state residents add 7% sales tax. Dealer inquiries invited

Now from Falsoft, The RAINBOW MAKER, comes . . .

The monthly magazine that's reader-friendly

If you're interested in the highly popular Model 100, the Tandy 200, the brand new portable Tandy 600 or Tandy's new generation of MS-DOS computers — the 1000, 1200, 2000, or the exciting new Tandy 3000 — PCM is for you!

PCM, The Personal Computer Magazine for Tandy Computer Users, is brought to you by the same people who bring you THE RAINBOW, the premier magazine for the Color Computer. Need we say more? So, if you're ready to add portability or step up to MS-DOS, stay with Tandy and THE RAINBOW family by subscribing to PCM!

FREE PROGRAMS!

We learned from THE RAINBOW that readers want <u>programs to type in</u>, so each month we bring you an assortment of them, including games, utilities, business applications and graphics.

BAR CODE, TOO!

Also, PCM is the only computer publication in the world (that we know of) that brings you programs in bar code, ready to scan into memory with the sweep of a wand!

TUTORIALS GALORE

Add to this our regular tutorials on telecommunicating, hardware and machine language, as well as BASIC programming tips and product reviews, and we think you'll find we're one of the most informative and fun magazines on the market today.

So if you're ready to add portability or step up to MS-DOS, stay with Tandy and THE RAINBOW family through PCM.

WE'VE OUTDONE OURSELVES!

DS-69A DIGISECTOR™ THE VIDEO DIGITIZER NOBODY CAN BEAT!

The DS:69A is the best video digitizer available for your COCO at any price. This new, turbocharged version of our original DS-69 Digisector allows your 64K COCO to see clearly into the world of any television picture.

SPEED! The fastest — 8 images per second!

PRECISION! The highest — 64 levels of true grey scale! RESOLUTION! The finest -256×256 picture elements!

Use with a black and white or color camera, a VCR or tuner. Compabitibility

Self contained in a plug in Rompack. Compactness

Use with a Y-cable, Multi-Pak, PBJ Bus or plug directly into the cartridge slot. Convenience

Ease of Use Software on disk will get you up and running fast!

POWERFUL C-SEE™ SOFTWARE

C-SEE is the menu driven software package included with your DS-69A. Available on disk or cassette, it provides lightning fast 5 level digitizing to the screen, high precision 16 level digitizing for superb hard copy printout and simple keyboard or joystick control of brightness and contrast. Or call our driver routines from your own Basic program for easy 64 level random access digitizing. Pictures taken by the DS-69A may be saved on disk or cassette by C-SEE and then edited with COCO MAX, MAGIGRAPH or GRAPHICOM for special effects. Any of the popular printers may be used to obtain printouts of images digitized by the DS 69A.

ONE YEAR WARRANTY

DS 69A Digisector & C SEE III Software \$149.95

OR your DS-69 & \$ 59.95

MAGIGRAPH Graphics Editor on disk \$ 39.95

DS-69 DIGISECTOR ** THERE'S ONLY ONE BETTER VIDEO DIGITIZER...

And that's the DS-69A. The DS-69 is The Micro Works' original video digitizer, tried and true since 1984. It provides almost all the features of the DS-69A and is now available at a new low price. The DS-69 features;

SLUGGISHNESS

2 images per second. Quick enough to freeze all but the fastest moving pictures.

IMCOMPATIBILITY

Brightly colored scenes may be striped when using a color camera.

INCONVENIENCE

Will not work with a Y cable.

Otherwise, it's a DS-69A. Precision, resolution, compactness, ease of use, software and warranty.

Except one last thing.

DS-69 Digisector & C-SEE III Software

\$ 99.95

Superb image quality produced by both Digisectors.

Printout

Screen

NO RISK GUARANTEE

If you are not completely satisfied with the performance of your new DS-69A or DS-69 you may return it, undamaged, within len days for a tull refund of the purchase price. We'll even pay the return shipping. If you can get any of our competitors to give you the same guarantee, buy both and return the one you don't like. We know which one you'll keep.

The RAINBOWfest Reporter

Vol. 2, No. 1 February 1986

Prospect, Kentucky

Writer: Bruce N. Warner

Weather no deterrent to Palo Alto RAINBOWfest

There are any number of things that could have made the Palo Alto RAINBOWfest a failure. There was record-breaking rainfall, mud slides, highways covered with water and a lot more. But you can't stop a CoConut. In spite of the weather, people looked to the sky and saw the rainbows that may have reminded them that RAINBOWfest was alive and well. A good sign in any number of cultures, the rainbow symbolizes the good around us,

News seems to be the theme of RAINBOWfests and this one was no exception. From 256K RAM cards to the presence of two Users Groups, there was news at RAINBOWfest.

Many booth vendors have asked that their show prices not be mentioned in "The RAIN-BOWfest Report." Some specials are available because of special bulk purchases and others are offered to draw interest to a specific booth or just as a bonus for participating in the show. There are even instances when a vendor is able to make a special purchase that is carried to the show and is not otherwise available.

It's enough to report that every vendor displayed a new product and/or had at least one discount for the show. The only way to get in on the show specials is to be there! The next RAINBOWfest is in Chicago, May 23-25.

Masa Patterson, 3, of Concord, Calif., seems to have things well in hand as his brother, Willy, 6, and tather, Bill, look on.

Richard Alan of J&M gives a quickie tutorial.

J&M — a hard act to follow

The extra power of the new JDOS has caused many CoCo owners to abandon Disk BASIC forever. The newest version is sure to show why many of us are willing to switch to a new DOS even with loss of compatibility.

If you're using your Color

Computer under BASIC, you can cure many of the compatibility problems by saving programs in ASCII format, a simple trick many users have forgotten. Add a socket for your Radio Shack ROM, and you're on your way to a super system.

But that's not the best news. J&M was delighted to show its new hard drive, which boots OS-9 directly. It's the only hard disk for the Color Computer that doesn't even require a floppy disk to boot up OS-9, all directly from the J&M controller.

In addition to CoCo owners, Tandy portable and MS-DOS users attend the concurrent PCM fest, sponsored by RAINBOW's sisfer magazine PCM.

Something to hoot about at the Owl-Ware booth

Owl-Ware offers a true hard disk under both OS-9 and Disk BASIC. They do it by requiring both the LR Tech hard drive interface and the DISTO Super Controller. With these two items and a customized 27128 EPROM (configured separately for each system), the Color Computer accesses a hard drive as drives 4 through 9. These "drives" are directly addressable from OS-9 in their "DRIVEn" directories, This may prove to be the perfect mating of both systems!

Education and computers are theme for CoCo Community Breakfast

Among those at the head table, Janet and Bill Barden.

William D. Gattis, vice president of Tandy's Education Division, was the guest speaker at the CoCo Community Breakfast, Gattis spoke on "Computers in Education: The Next Five Years."

In this area, Tandy has been a major contributor. Their continuing availability of educational software from all levels (from preschool through graduate level) makes Tandy a leader in this area.

The CoCo Community Breakfast offers both Color Computer and MS-DOS computer enthusiasts an opportunity for fellowship and a chance to make new friends with similar interests in a congenial setting.

> Breaktast keynoter William D. Gattis.

Saturday morning's traditional CoCo Community Breakfast is hosted by RAINBOW's Lonnie Falk.

Rosen does it again

Bob Rosen of Spectrum Projects was wheeling and dealing in his usual style at Palo Alto, He was making the deals and showing the things that make RAINBOWfest a success.

In addition to the Spectrum Thunder RAM, Bob was running specials on the DISTO Super Controller, designed by "Turn of the Screw" guru Tony DiStefano. This is the same Super Controller that can have its own built-in 80-column card, parallel printer port and

real-time clock, All for the cost of an 80-column card alone.

Rounding out the Rosen collection was *Telepatch*, a set of enhancements for *Telewriter-64* that gives the user true block movement, overstrike, spooling and type-ahead buffer plus faster disk 1/O.

The big Spectrum Projects deal of the weekend was the 64K CoCo for just \$64! A deal by any other name is just a deal, but \$64 64K CoCos are beyond the dreams of mere mortals.

OS-9 Users Group Breakfast draws several speakers

The OS-9 Users Group Breakfast was opened by OS-9 Users Group president Brian A. Lantz, He set the theme as one of friendship and openness.

Wayne Day of CompuServe spoke on his additional new post as the SysOp of the OS-9 SIG (Special Interest Group) on CompuServe. Wayne is also SysOp of the CoCo SIG.

Bruce Warner, editor of MOTD (UG's monthly newsletter), made a pitch for input from writers.

The last speaker, Paul Searby, president of Computerware, spoke of what needs to be done to make OS-9 an even better operating system, including better new-user documentation, more software and less comparison to UNIX.

One of Paul's more striking comments was about the need for a programming language to be included with OS-9 — one that is easy to use and capable of opening its true power to new computer users. Because it comes with a good assembler and a simple editor is not enough to make it the operating system of the future. He feels OS-9 must be made more understandable if it is to survive.

Something sweet from Sugar Software

Sugar Software's Susan Davis has always been noted for showing how women can be a vital part of the Color Computer industry. At the Palo Alto show she lived up to and surpassed her reputation.

CoCo Knitter was the hit of the show for Sugar Software, Here's a program that asks for the measurements, plans the pattern and gives all the information needed to knit a perfect sweater, including the pattern and amount of yarn.

Susan informed us she was advised against the practicality of CoCo Knitter, but this program proves that you can't argue with success!

Susan Davis with a colortul array of packaged programs in her Sugar Software booth.

Computerware is everywhere!

Sue and Paul Searby of Computerware were on hand for every major function of the Palo Alto RAINBOWfest, including Paul's presence as the guest speaker at the first OS-9 Community Breakfast.

Computerware offered a variety of Color Computer software and hardware and showed that they will continue to be a leader in the Radio Shaek market. Compared to the price of comparable MS-DOS software, Computerware was practically giving theirs away.

Sue Searby responds to a visitor at Computerware's exhibit.

MichTron displays new games

Gordon Monnier of Mich-Tron Software was eager to introduce their new products at Palo Alto. And he has good reasons to show off *Rommel 3-D* and *Pin Ball Factory*.

MichTron is developing a

name for inexpensive, quality, high resolution games for the Color Computer. If Rommel 3-D and Pin Ball Factory are any indication of what we can expect in the future, we're in for the time of our lives.

Radio Shack cleared the warehouse

The Radio Shaek booth had some of the best deals in town, including Tandy's DT100 terminals for \$125!

It was rumored that some people obtained entire pocket computer systems for less than \$40, including software and eassette systems. Add to that the offering of software at 60 percent and more off the suggested retail price, and the Radio Shack booth may have had the deals of the show.

A flea-market atmosphere pervades the local Radio Shack's centeralsie space as both hardware and software are greatly discounted.

Brian Lantz, president of the OS-9 Users Group.

OS-9 gurus: man your booth!

Something new came to Palo Alto. They came with built-in multitasking, they were multiusers and they were all booted up! The OS-9 Users Group manned the booth directly across from the Falsoft booth.

Throughout the weekend, newcomers to the OS-9 Community came by the booth to learn all about OS-9, BASICO9, procedure/script files and a lot more. With such people as Brian Lantz, Bill Turner, Steve Odneal, Dale Puckett, Jim Kemp and Bruce Warner on hand to field questions, there wasn't one that couldn't be answered.

DISTO or CRC? This is the question

One of the busiest booths was DISTO's, a new Color Computer third-party vendor from Canada. They feature products designed by RAINBOW Contributing Editor Tony DiStefano. Their best known product is the DISTO Super Controller, a disk controller for the Color Computer that supports up to four software selectable DOSs and has its own expansion bus inside the controller, which supports their set of peripheral equipment and adapters.

The only problem DISTO had at the show was having enough products, By Sunday morning they had gone through all of their Display80 cards (an 80-eolumn display with parallel printer port and real-time eloek that all fits inside the DISTO Super Controller at once), most of their MPROM programmers (an expansion device to program 2764 and 27128 EPROMs also used inside DISTO Super Controller) and almost all of their Super Controllers. After selling down to the bone, they decided to liven things up by announcing that they would give away a Super Controller to the first person to bring a copy of their ad from the March 1986 RAINBOW magazine.

Will Murray of Sacramento brought his pug, Kaiana. Will reads both RAINBOW and PCM, so the combined show is made to order for him.

Deiphi's John Gibney (at keyboard) and Bryan Eggers, president of Software Atlair, online at RAINBOWtest.

Local users represented by California Computer Federation

A local users group usually takes a booth at RAINBOW-fest, and in Palo Alto it was the California Computer Federation (CCF). Their group spreads from Sacramento to San Francisco and even farther to Los Angeles. The CCF has contacts in Los Angeles (Harry Tischler 818-997-6000), San Francisco Bay Area (Dick Stanich 415-366-4560) and Sacramento (Mike Faulkin 916-753-7354).

At the show, they were ac-

tively involved in signing up new members, selling RAIN-BOWfest T-shirts and providing information.

The CCF exhibit showed some of the best reasons to join a users group, including a public domain software library, special guest speakers, user tutorials and programming lessons. Those fortunate enough to live in the state of California should contact one of the CCF representatives mentioned above.

Microcom offers a wide variety of CoCo products

Programs at the Microcom booth included all-time favorites such as DynaCale, Telewriter-64 and the Best of CoCo Time '85, a package of the best-selected utilities from CoCo Time, their monthly magazine produced on tape and disk. They also had informative books available for the CoCo user. 500 Pokes, Peeks 'N' Execs for the Color Computer, Utility Routines and BASIC Programming Tricks were among the wide array of offerings.

Hard Drive Specialists parade Tandy 1000 accessories

The folks from Hard Drive Specialists came ready to strut their stuff. Their major promotion for the show was their Tandy 1000 line, but they continue to show the CoCo HDS disk controller complete with disk drives.

The HDS controller now supports both 2764 and 27128 EPROMs in the 28-pin socket as well as the 24-pin standard socket. The nicest thing about having two ROMs is switching from an enhanced 16K ROM on an inexpensive 28-pin EPROM to standard Radio Shack Disk BASIC (1.0 or 1.1) in the 24-pin socket.

HDS was busy showing their Tandy 1000 internal/external hard drive, and they even showed one model with an external and two internal hard drives.

John Monin, newly-appointed president of Colorware, is "pleased with sales of our CoCo Max II."

Colorware maintains their pretty picture

Colorware, Inc. was again showing how great their CoCo Max II program is. It rivals virtually all other graphics programs currently on the market. With CoCo Max II, you can draw a picture, fix errors, save any part or all of it and you can almost do without the manual.

Colorware's big product for 1985, enhanced with more features in CoCo Max II, may prove to be the product of the year for 1986.

No "second-hand" games from Diecom Products

For a long time, games for the Color Computer were a rehash of what came out for the Atari, From Space Invaders to Donkey Kong, you could play Atari games using the CoCo. Today things are different.

Diecom Products is proving

that the imagination cannot be limited. With Diecom there are no rehashings of old programs, but new software, from Marble Maze to the newest in their line, Paper Route.

Watching the paper boy deliver papers from his bicycle while evading potholes, oncoming cars, pedestrians and cracks in the sidewalks can hold your attention for hours.

If you're looking for a fun game that gets away from the OK Corral shootouts, Diecom Products has the answer.

RAINBOW editor and publisher Lonnie Falk discusses bringing the show back to the Los Angeles area with Color America's Mark Randall (center) and Sleve Harlford (right).

Spectro Systems shows off ADOS

Art Flexser was kept busy demonstrating ADOS, the enhanced EPROMable Disk Extended BASIC, compatible with virtually 100 percent of Color Computer software. When the crowd wasn't canvassing the hardware, they were cliccking out some of the software offerings like The Peeper, a machine language program tracer that multitasks with target programs, or Fastape, a cassette utility that allows double-speed tape operation.

Professor Art Flexser, owner of Spectro Systems and author of ADOS, is also an experimental psychologist specializing in human memory at Florida International University in Miami.

Despite the heaviest rains in years in the Bay area, more than 7,300 people follow the rainbow to our Palo

Step right up and have your fortune read

LS Systems' The Gypsy was busy showing how the Color Computer can be used in business. For LS Systems, it's a matter of using the Color Computer to entertain people at carnivals. They selected the Color Computer for the same

reason most of us did. There's one virtually everywhere,

dump program.

Moreton Bay Software

Moreton Bay Software continues to provide both software and hardware for Color Computer users. Although there wasn't anything new at the booth, their solid line of products would be hard to add to.

Moreton Bay offers everything from video interfaces and

built-in sound for the CoCo to unadvertised backup power supplies that keep RAM intact when the power goes out, Their big offer was a new deal on Okimate 20 printers for \$220 with a Color Computer screen

offers special on printers

The representatives in the LS booth made no claim that *The Gypsy* could actually tell your fortune, but it is used to attract attention and entertain passersby at carnivals and circuses.

Cross-country trek rewarding for Derringer Software

California was a short jaunt for many of the vendors, but for Derringer Software it was a trip across the country.

Dennis Derringer was busy all weekend showing off his new and old products. From Pro-Color-File to @Summary, Dennis continues to provide the Color Computer Community with excellent software, Dennis feels that software should be released only when it is able to stand on its own, without errors, and do what it's advertised to do. For Pro-Color-File, that has meant that the only changes

Prickly-Pear displays

new Adventure

games

made were to allow it to read DynaCale files. It remains one of the best database programs available under Disk BASIC.

The @Summary program is a great addition to DynaCalc, With it you can read a column of figures and develop a summary of expenditures hased on any key entry, You can finish the year by having the Disk BASIC or OS-9 DynaCalc files dump out expenditures in chronological order. Using @Summary, you can have them summarized in almost any order.

Saguaro Software as exciting as ever

Joanne and Mike Chintis were adventurous in the Prickly-Pear booth — they had new Adventure fantasies on display.

Warp Factor X, Hall of the

Warp Factor X, Hall of the King and Dragon Blade are the new fast-paced games from Prickly-Pear. All three are designed to keep you on the edge of your seat, trying to stay alive through the next turn of the Adventure. If you should live through the Hall of the King, the Adventure continues with Hall of the King II (The Inner Chamber).

Sagnaro Software was proudly showing off their Fighter Pilot and Pumpman programs. Both are fast action, high resolution games for children of all ages, including us 30-plus kids.

When Saguaro Software went into their post-Christmas, low-profile mode, it was rumored that they had gone out of business. But, they are very much alive and well, with some of the best games available for the Color Computer.

Southwestern Digital displays quality hardware

Presenting an assortment of quality hardware products, Southwestern showed off the Keytronies Keyboard, an alternative keyboard for the CoCo. They also featured memory expanders and disk drives.

CoCo Max author Tim Jenison has customized a TDP-100 (a CoCo-ctone, which Tandy no longer markets) by adding both a disk drive and black and white TV inside the case!

The Delphi Affair — Jav and Sassy

Javier Henderson and his bride, Sylvia, met on Delphi. He was calling from Buenos Aircs, Argentina, she from Alta Loma, Calif. That was last July. By September, the digital dialogue gave way to weekly voice calls from Argentina, They exchanged pictures. In November and December, it seemed they were always online.

Sylvia (whose username is SASSY) is an electronics engineer at General Dynamics, and Javier (JAV) is an electronics technician, but the telecommunications lines fairly crackled with amorous, not technical, interchange.

December 7, Jav arrived in the U.S. and a week later they were married in Las Vegas at the Candlelight Chapel. Look for the newlyweds online.

PSET Sail in the FOR/NEXT Sea

By Joseph Kolar Rainbow Contributing Editor

Today's agenda concerns the PSET statement and FOR/NEXT loops lots of them! It will be helpful to review the hot scoop and get an overview of PSET and FOR/NEXT from vour favorite manual.

The idea for this tutorial sprang from attempting to convert a "brand X" computer's BASIC into CoCo's vernacular. The plan was to create on a Hi-Res screen, in glorious color, a diagonal line using PSET and FOR/NEXT loops to add each box (pixel) to give the illusion of movement. The line was to begin in the upper left-hand corner at (0,0) coordinates - at a horizontal location of zero and a vertical location of zero, It would head toward the lower right-hand corner. A straight diagonal line would end at (191,191).

Key in lines 10-50 from Listing 1. Line 30, PSET(X, Y, Z), tells CoCo that we want a small box lit up on the graphics screen at a horizontal location, 'Z'. In this listing, the unnamed color 'Z'

'X', a vertical location, 'Y', and in color

is '0'. As a point of information, '0', '4' and '8' will generate the same color on whichever SCREEN 0 or 1 that is used.

Line 20, FOR X=0 TO 191, and Line 50, NEXT X, tell CoCo to light up each horizontal location from zero to 191 in sequence and add them to the display, In order to make the boxes run diagonally, Line 40 demands that CoCo drop down one space on the 'Y' axis, Y=Y+1, each time so the boxes give the appearance of racing pell-mell down the screen

In my mind's eye, I visualize the FOR/ NEXT loop as a set of brackets that tell CoCo how many times the program lines within the brackets should be repeated. To see this in action, temporarily add 51 GOTO 51 and run.

The instructions light, in succession, blocks (0,0), (1,1), (2,2), all the way through to (191,191) in color Z=0, or '4' or '8', which is orange.

Naturally, when I examined this diagonal line, I had no idea it would end up in the form it did, much less that it would become a subject for a tutorial.

Its purpose is to inspire you to think creatively! Every beginner is urged to let the creative juices bubble. You should ask yourself, "Now what? What can I do to alter this program? Can I improve it?

Enlarge it? Make it more interesting?" You get the drift. There is no such thing as a program that can't be modified, expanded or improved to suit the whims of the person at the keyboard.

Getting back to our loops, my mind's cye saw the line bounce off the bottom wall to the right in a continuation of the action thus far generated. Now type DES1 and key in lines 60-90, Lines 61 and 71 are masked for the present. They will be unveiled and explained in due course. The colored line that rests at the bottom, 'Y', will be redirected upward, one step at a time: Y=191, Y=190, Y=189. At the same time the horizontal component, 'X', will move to the right one space at a time: X=191, X=192, X=193. Thus, the action will be (192,190), (193,189), etc.

It is not important to know the location of every succeeding set of PSET coordinates. All we demand is that the action advances as envisioned.

Add a temporary 91 GOTO 91 and run. The speeding line goes berserk when it reaches the wall at horizontal 255. It can't go any farther in that direction, and since it has possible vertical values to use up (Y), CoCo now uses the instructions X=255 and Y=Y-1. It continues on an upward, vertical

Florida-based Joseph Kolar is a veteran writer and programmer and specializes in introducing beginners to the powers of CoCo.

course until (255,0), where Y=0 and then flips its cork when it gets to Line 1002 (go ahead and peek!), where Y=-1 is requested. It can't do it so there is an FC Error in 1004.

Suppose you wanted to find out what the 'Y' value was when the line hit the right wall on the screen. Here is one way, add:

72 IF X=255 THEN CLS:PRINT Y:GOT010000 10000 GDTD 10000.

Line 72 tells CoCo that if X=255 is to clear the screen to the text screen so it can print 'Y', it needs to bypass the program to hold the value on the screen at Line 10000.

Copy Line 72 down if you want to recall the routine format for later use. Type in DEL72 and leave Line 10000 alone. It is harmless and we will need it later.

Obviously, we want to continue bouncing our line off the wall, so DEL91 and unmask (remove the REM marker) Line 71. Now type in EDIT71 to 'D' and press ENTER. We ask CoCo in a nice way to go to Line 1000 when X=255 for further instructions.

Key in lines 1000-1006. Now we reverse directions. Note that in a FOR/NEXT loop, when we go from a lower number to a higher value one step at a time, STEP1 is the default mode. If you do not add it at the end of the FOR line, CoCo assumes you want to go in increments of one. When you go from a higher number to a lower value, the STEP-X, where 'X' is the desired value, must be included in the FOR line so CoCo won't get cranky and knows exactly what your desires are.

Can you figure out from looking at lines 1000 and 1002 in which direction we are heading? Key in 1007 GDTD 1007 and run. Now you know for sure! We ran into the top wall and must veer away.

If you want to find out the value of 'X', use the routine you copied down. (Make sure you reverse the values, 'X' for 'Y' and 'Y' for 'X').

To continue our mad journey, type in DEL1007 and press ENTER. Since CoCo blew its fuse again, unmask Line 1001. This line tells CoCo, "OK, since Y=0, go on to Line 2000 for further instructions." Key in lines 2000 to 2006 and run. This time we caused poor CoCo to crash into the left wall (X=0). As you suspected, unmask Line 2001. Again, we tell CoCo, "You hit the wall, so go

to Line 3000 to continue."

Key in lines 3000-3006 and run. We are going to go in the same direction as in the second leg of the moving line (the routine for which begins at Line 60). Unmask Line 3001 and tell CoCo to go back and follow that routine one more time. We might as well get double duty from the routine, so run it again.

This segment gets us up into the corner but it reverses direction, heads in the opposite direction and eventually bombs out. This is because Line 71 says X=255 GOTO 1000. But, we have other plans — unmask Line 61. At a program line number that comes before Line 71 we can tell CoCo that if the running line gets into the upper right-hand corner of the screen (255,0), to go instead to Line 4000 for new instructions.

Can you figure out the next plan of attack? Certainly! Put a border around the screen, using the running line to continue the mad dash onward.

Key in lines 4000-7006. If you want to see each segment of the border as it is created, put temporary hold lines at 4007, 5007 and 6007 and run. Delete each one in turn and run.

All four routines beginning at lines 4000, 5000, 6000 and 7000 are somewhat similar. Study the listing to see how we told CoCo in which direction to travel. Note that in this group of routines, you could have put the 'X' value in lines in the 4000 and 6000 series and the 'Y' values in the 5000 and 7000 series, in place of the 'X' or 'Y' value in the appropriate PSET line. For instance:

From To 4002 X=255 4002 (line deleted) 4004 PSET 4004 PSET (X,Y,Z) (255,Y,Z)

Type in DEL4002 and press ENTER, then EDIT4004 and press the space bar to move the cursor under 'X', press 'D' to take out 'I', and 'I' to get into insert mode. Type 255 and press ENTER to get out of edit.

If you don't want to bother with this last modification, you must have noted that there are an awful lot of identical PSET lines in the listing. Why not put them into a GOSUB routine and call them with a GDSUB? You can do it for practice if you wish, however, it has no practical advantage because the PSET lines are

easy to key in and not much memory is saved by replacing PSET(X,Y,Z) with GOSUB9000, plus the fact that the GDSUB itself must be created. Key in 9000 PSET(X,Y,Z):RETURN.

Such are the musings of the master. Do it for practice to give yourself valuable confidence and familiarity with the raw material of BASIC.

Now run the program. What else ean we do? It looks like we lucked into a well-balanced, self-contained design. I wouldn't care to disturb it. But wait! Now that we created it, why not erase it, recreate it, wipe it out, ad infinitum?

Key in lines 8000-8001 and unmask both of them. A continuous loop is created so that if Z=1 (the blank-out color), then GOTO Line 8001, where the color is changed to the "put-on" color and returned to Line 20, to make a visible line. Otherwise, if Z=0 (put-on color), then change it to Z=1 and go back and erase the line by making an invisible line. If you changed Z=1 to Z=5 in Line 8000 and Z=0 to Z=8 in Line 8001, you would still get the same colors.

We could have used the LINE statement to create the border, but we would have lost the action. For practice, create the border using the LINE statement. After you solve that problem, use DRAW to do it one more way. The suggested answer is at the end of this tutorial.

The point of this tutorial, with its repetitive routines, is to get you immersed in a sea of FDR/NEXT loops that use the PSET statement as its moving force. You are encouraged to improve, modify and alter this program in any manner you can conceive. You owe it to yourself to practice, and while you are hammering away at the keyboard, remember, "everyday, in every way, I am learning a little bit more and I feel good about my CoCo."

CoCo enjoyed your key-tickling endeavors and I hope you enjoyed this tutorial.

To alter the border:

DEL4000-7006 4000 LINE(255,191), PSET:LINE-(0,191), PSET:LINE-(0,0), PSET :LINE-(255,0), PSET 4000 DRAW''C4BM255,0D191L 255U191R255"

This gives a variation of a theme.

Don't Be Fooled By Those Error Messages

Many of our readers have written to us saying the computer tells them there is an error in a line that has been entered correctly. This is usually caused by errors in a related line. For instance, an illegal function call (FC) error is almost always caused by an incorrect variable definition elsewhere in the listing. Also, if a line containing a READ statement is typed in wrong, you will get a syntax (SN error in the DATA statement line number — even though you typed it exactly as it appeared. Remember, be patient and thorough when debugging.

that's right. We've decided that programs like Shenanigans and Symphony 12 aren't the only great ones around. There are also Silver Streak and Star Trek and Some Like It Hot — software of a different sort.

That's why we've published VCR, The Home Video Monthly, the magazine for the new generation of home viewers.

Home video has evolved beyond the "hacker" era, when you needed a degree in electronics just for a little entertainment. Most people don't care about how the signal-to-noise ratio and wowand-flutter specs of their equipment compare to the latest models. They simply want to know how best to use and enjoy the equipment that they have.

And that is what **VCR** offers — how to get the very best in home entertainment from your equipment.

Each month, VCR brings you previews and ratings of every new offering on tape and disc: music videos, children's shows, how-to guides, and movies, movies, movies.

We tell you which shows the critics themselves will be taping on the networks and cable, along with tips from the experts on how to get the best possible reproductions. And you can turn to us for the answers to your questions, ranging from the trivial to the technical.

Even more, each month we feature exclusive interviews with the stars and the star-makers, along with articles designed to help you relive some of your fondest video "memories" of the past.

Yes, programming is more than spreadsheets and databases. And we know you'll want to be a charter subscriber to the guide to the very best in entertainment software.

RECEIVED & CERTIFIED

The following products have recently been received by THE RAINBOW, examined by our magazine staff and approved for the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

This month the Seal of Certification has been issued to:

Alphabetizing, an educational program requiring a disk drive that uses graphics to teach the concepts of alphabetizing, including missing letters, letters before/after, alphabetizing words with pictures, by first letter and from second to sixth letter. Comes on two disks with a management system, teacher's guide and a backup copy. Aquarius People Materials, Inc., P.O. Box 128, Indian Rocks Beach, FL 33535, disks \$69

The BASIC Advanced Programming Aid, a 16/32/64K program to integrate the mostused utility functions and save disk space and time, because programs do not have to be stored in ASCII format. Features include a copy command to copy one or more statements in a program, a move command to move one or more statements, a find command to find a string and repeat it, and Multiple Editing Sessions allowing users to edit two programs at once and MERGE all or part into one program as well as run a program while editing another. There are scrolling, command keys, repeating keys, automatic line numbering, BASIC formatting, keyboard clicker, CLEAR key disable and automatic program exit. Bangert Software Systems, P.O. Box 21056, Indianapolis, IN 46221, cassette or disk \$24.95, plus

Super Programming Aid, a 16/32/64K program containing all the features of *The BASIC Advanced Programming Aid* plus programmable command keys allowing users to program any key to cause up to 250 characters to be entered. *Baugert Software Systems, P.O. Box 21056, Indianapolis, IN 46221, cassette or disk \$24.95 plus \$2 S/H*

Zork I, a 64K Adventure game for the Color Computer 2 requiring a disk drive. This interactive fiction game has four levels, from introductory to expert, and places you in the role of explorer, who delves the vast underground world of Zork for incomparable treasures and matches wits with outlandish creatures. Infocom, 125 Cambridge Park Drive, Cambridge, MA 02140, disk \$34.95

Wishbringer, a 64K Adventure game for the Color Computer 2 requiring a disk drive. This interactive fiction story places you in the role of post office worker, who in the performance of duties, becomes entailed in a fantastic quest. Traveling through strange and savage zones, you carry the heart of a wronged princess who died unfulfilled; her heart has become a magic stone and her vindication rests on your skill and wits. Infocom. 125 Cambridge Park Drive, Cambridge, MA 02140, disk \$34.95

The Witness, a 64K Adventure game for the Color Computer 2 requiring a disk drive. The scenario places you in the role of Chief Detective for a quiet burgh on the outskirts of L.A. One high-society dame is dead, and blackmail and shakedowns abound. You face a Gordian knot of motives and alibis and a race against the clock to nail the killer before you get nailed first. Infocom, 125 Cambridge Park Drive, Cambridge, MA 02140, disk \$34.95

Portraits of Christ: As Painted in John's Gospel, two disks requiring 64K and a word processing program capable of reading ASCII text files and having a storage buffer of at least 20K. This is a manuscript on disk

that covers 21 aspects of the life and work of Christ as portrayed in John's Gospel. Sovereign Grace Software, 221 Highview Drive, Ballwin, MO 63011, disk \$16.95 plus \$1 S/H

An Introduction to the Doctrines of Grace, a 64K disk that contains a basic introduction to the doctrine of God's sovereignty in electing grace. Sovereign Grace Software, 221 Highview Drive, Ballwin, MO 63011, disk \$10.95 plus \$1 S/H

Miscellaneous Writings, a 64K disk containing 13 files of articles, tracts and sermon notes, Sovereign Grace Software, 221 Highview Drive, Ballwin, MO 63011, disk \$10.95 plus \$1 S/H

Snap Study System, a 32K home utility requiring a disk drive that functions as an outliner to simplify keeping records, plans, summaries, checklists, agendas, references and notes. Features include ease of revision, addition, deletion, print and no necessity for filenames. Cozy Software, 25142-53 Avenue, Aldergrove, British Columbia, Canada VOX 1AO, disk \$19.95 plus \$2 S/H

U.S. Stamp Inventory Management System, a 64K program for the Color Computer 2 requiring a disk drive. This program for philatelists supports all U.S. stamp categories, allows addition, deletion and editing of inventory, inventory display and printouts, update of inventory retail values, flexible inventory value computations, insertion of items in proper inventory sequence and identification of items by Scott catalog

numbers. Crockett Software, P.O. Box 1221, St. Ann, MO 63074, cassette \$44.95

Mailing List/Data Information, a 16/32/64K program for the Color Computer 2. This is a business and/or home utility that features support of five- or nine-digit ZIP codes, sorts performed on ID#, name or any term, entry of name and up to three address lines plus three general information lines per record. Crockett Softwarr, P.O. Box 1221, St. Ann., MO 63074, cassette or disk \$29.95

Build-A-Word, a 32K educational program that combines the introduction of the alphabet with word building. Parents or teachers may choose words from the environment or classroom tasks and the program is followed by the game, Guess My Word, as a direct application of what has heen learned. Thompson House, P.O. Box 58, Kamloops, British Columbia, Canada V2C 5K3, cassette or disk \$32.95

Counting Things V.2, a 32K educational program comprised of three programs: Matching Things, Counting Things and Abacus Counting that offer 12 activities, primary-sized upper- and lowercase letters and built-in instructions for parents or teachers. Thompson Honse, P.O. Box 58, Kanloops, British Columbia, Canada V2C 5K3, cassette or disk \$32.95

Error Trap Number Facts, a 32K educational program offering drills in all four math functions (addition, subtraction, multiplication and division), primary-sized characters, the choice of right-to-left or left-to-right entry of answers and the trapping of errors. Lessons can be composed, saved and retrieved through a menu system. Thompson House, P.O. Box 58, Kamloops, British Columbia, Canada V2C 5 K3, cassette or disk \$32.95

Error Trap Spelling, a 32K educational program offering large, primary-sized upper- and lowercase characters, full control of the vocabulary used, menu operation and errors trapped to provide individualized lessons. Thompson House, P.O. Box 58, Kamloops, British Cohanhia, Canada V2C 5K3, cassette or disk \$32.95

3-D Graphics Program, a 64K menu-driven program that provides for simultaneous rotation, movement, zoom and animation of 3-D graphics images. Images can be printed out on Radio Shack dot-matrix printers. Included in the package are data for a 3-D depiction of a spaceship and animation examples of a cube. Logicware, 730 W. McDowell Road, Phoenix, AZ 85007, cassette or disk \$32,95 phts \$3 S/H

Pinball Factory, a 64K collection of arcade games requiring a disk drive. Black-and-while graphics are used to increase screen resolution. There are predesigned arcade games and lips to modify them to increase or decrease difficulty levels, and instructions on designing an arcade game of your own including choice of playing field, bumpers, obstructions, rules and logo. Mich Tron, 576 S. Telegraph. Poutiac, MI 48053, disk \$34.95

Rommel 3-D, a 32K ML arcade game requiring a disk drive. The scenario places you on a course inhabited by impenetrable barriers and enemy tanks. Strategy, speed and resourcefulness with your tank's cannon are your only hope for escape, Mich Tron, 576 S. Telegraph, Portiac, M1 48053, disk \$29,95

Enhanced Racing Analysis Package, a 32K handicapping program comprised of three programs. Selection one is for thoroughbred racing handicapping and Selection two is for harness racing handicapping to be used to analyze data taken from a racing form and aid in selecting winners at the race track. Both programs accept 12 data items for each entry in a race and assign a number rating (high rating equals favorable choice, low equals unfavorable). Selection three is a bel return analysis to calculate profit or loss for one or more races. Software Exchange, P.O. Box 5382, W. Bloomfield, M1 48033, cassette \$49.95 plus \$2 S/H

TXEDIT, a 64K word processing program requiring a disk drive. Features include Hi-Res graphics screen with display of true descenders of lowercase, 32 by 22 display, formatting features such as left and right margins, margin release, lex1 centering and right justification. Supported are printer features such as underline, bold, italics, superscript and subscript. Can be adjusted for any Baud rate or printer, H.D.R. Software. 27 Doyle Street, St. John's, Newfoundland, Canada A1E 2N9, disk \$44.95

DSKUTIL, a 64K disk utility requiring a disk drive with printer optional. Comprised of four programs: *Backup* to back up a disk in one to three passes, select disk head stepping rate and warn users if destination disk is not blank; *Diskfind* to track up to

3,000 files kept in alphabetical order and allows users to implement three-character disk 1Ds as well as print out a directory of disks; Deheck to analyze the directory, point out file structure errors, lest sectors and construct pointers to help users avoid bad sectors; Diskzap to edit sectors on a disk to aid in salvaging files and comes with scratch-pad calculator mode for performing arithmetic while editing a sector. Diskzap alone requires The Enhancer. H.D.R. Software, 27 Doyle Street, St. John's, Newfoundland, Canada A1E 2N9, disk \$39.95

Mathpack, a 64K calculus program requiring a disk drive and The Enhancer. The program has five sections: Integration to integrate an arbitrary function using Simpson's Rule with input via an INPUT statement, making listing or DEF FN statement unnecessary; Root Finding to find all 'x' such that f(x)=0, for solving equations impossible to solve analytically, with user's control for the interval over which the computer scans and the maximum allowable error; Cartesian Graphing to produce a graph of an arbitrary function over an interval you specify; Polar Graphing to draw a graph of any function expressed in polar coordinates; Parametric Graphing to graph a curve in the X-Y plane expressed parametrically as x=X(t); y=Y(t), H.D.R. Software, 27 Doyle Street, St. John's, Newfoundland, Canada A1E 2N9, disk \$21.95

Okimate 20 Color and Monochrome High Resolution Screen Dump Program, a screen dump intility for the Okimate 20 printer featuring point and pick menus allowing users to select colors. Baud rates, picture file, picture size and graphics mode. Possible are four different sizes of color dumps and four different sizes of monochrome dumps. Moreton Bay Software, 316 Castillo Street, Santa Barbara, CA 193101, screen dump program \$29.95

Correction

"Received & Certified" (January 1986, Page 188): Pro Golf from Computerware is available only on disk as listed. The price, however, is \$29.95 instead of \$49.95. We are sorry for any inconvenience this may have caused.

The Seal of Certification program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a Seal, the magazine certifies the product does exist — that we have examined it and have a sample copy — but this does not constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW's reviewers for evaluation.

— Monica Dorth

REVIEWING REVIEWS

XPNDR2

Editor:

I was very pleased with the positive review by Jerry Semones of our CoCo interface hardware.

As described in the February 1986 review [Page 213], there is a connector on the XPNDR2 card for mounting a disk controller or ROM pack. What is not mentioned, however, are the spring clips on each side of the connector. The XPNDR2 is a unique design, but those spring clips are what really set the card apart.

Take a look inside the cartridge port of any CoCo. You will see similar clips on each side of that connector. These are to provide a good ground connection between the CoCo computer board and the disk controller, necessary for reliable disk 1/O and elimination of interference patterns on the screen. Without the spring clips on the XPNDR2 card this ground path would be lost.

I have observed that not every expansion product offered for the CoCo provides this solid ground connection. I can understand why — those clips are not readily available and it took several weeks of hard work to design and have machined a tool for forming them. To make the clips, we purchase precision stamped flat blanks of berylliumcopper (the right stuff), form them ourselves, send them out for heat treating so they will never lose their grip, have them nickel- and gold-plated so they will never corrode and finally assemble them with the XPNDR2. It's a lot of trouble but well worth it in terms of performance.

Mr. Semones noted the LED on/off indicator on the XPNDR2, but it's not just any old LED. It's a state of the art device that operates on only 2mA instead of the normal 20mA. The fact that they cost over twice as much is OK; with a power budget of 300mA at 5V, those 18mA might be needed by someone.

It's not every month you get a review in RAINBOW, and I wanted to let everyone know about the professional effort that goes into the design and manufacture of our products. We've sold these cards to many companies, including General Motors and DEC; they're used in university labs all over the country and also by many individual experimentalists; they've been used to interface the CoCo to everything from a mass spectrometer to music synthesizers. I can't imagine supporting these projects with anything but the best.

Herb Hart Robotic Microsystems

Hi-Res+ and Label Maker

Editor:

My thanks to Chuck Wozniak and Bruce Rothermel for their thoughtful reviews of my programs *Hi-Res+* and *Label Maker* (January 1986, pp. 195-6). I do, however, wish to clarify a few minor points.

In the review of *Hi-Res+*, Mr. Wozniak mentions that the program is "written in BAStC." Nothing could be further from the truth. The program is 2.5 of pure machine language code—this code has been appended to a short

BAStC program for ease in copying and loading by the user. This loader can also be modified by the user to include whatever he wishes (as noted in the review). Also, since *Hi-Res+* was submitted to your magazine for review, a new version has been released (Version 1.1). This version corrects a few minor bugs in the original and has a faster screen display routine.

In the review of Label Maker, Mr. Rothermel complained about the lack of a "print driver for more popular printers." We have not included printer drivers for a number of reasons, but the main reason is the lack of standards in the printer industry. Even within the same family of printers, there are differences - one printer might have doublestrike or near letter-quality; its brother may not. Besides, the editor permits the creation of custom fonts easily. The printer font included is not all that unusual: The Roland printer is identical to ones marketed in the U.S. under the Panasonic name and is compatible with the Epson standard (as is mentioned in the documentation).

The only other oversight in this review is lack of mention of the onscreen previewing. Label Maker displays the label on the screen as it is created, just as it will appear on the printer. This includes underline, italics, double-wide and condensed type styles—a major feature.

I hope this helps your readers select from the many fine programs for the Color Computer,

Bob van der Poel CMD Micro Computer Services Ltd.

CoCo Cat

RAIBOW Info

How To Read Rainbow

Please note that all the BASIC program listings in THE BAINBOW are formatted for a 32-character screen — so they show up just as they do on your CoCo screen. One easy way to check on the accuracy of your typing is to compare what character "goes under" what. If the characters match — and your line endings come out the same — you have a pretty good way of knowing that your typing is accurate.

We also have "key boxes" to show you the *minimum* system a program needs. But, do read the text before you start

typina.

Finally, the little cassette symbol on the table of contents and at the beginning of articles indicates that the program is available through our AAINBOW ON TAPE service. An order form for this service is on the insert card bound in the magazine.

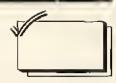

What's A CoCo?

CoCo is an affectionate name that was first given to the Tandy Color Computer by its many tans, users and owners.

However, when we use the term CoCo, we refer to both the Tandy Color Computer and the TDP System-100 Computer. It is easier than using both of the "given" names throughout THE AAINBOW.

In most cases, when a specific computer is mentioned, the application is for that specific computer. However, since the TDP System-100 and Tandy Color are, for all purposes, the same computer in a different case, these terms are almost always interchangeable.

The Rainbow Check Plus

The small box accompanying a program listing in THE PAINBOW is a "check sum" system, which is designed to help you type in programs accurately.

Rainbow Check PLUS counts the number and values of characters you type in. You can then compare the number you get to those printed in THE RAINBOW. On longer programs, some benchmark lines are given. When you reach the end of one of those lines with your typing, simply check to see if the numbers match.

To use Rainbow Check PLUS, type in the program and CSAVE it for later use, then type in the command RUN and press ENTER. Once the program has run, type NEW and press ENTER to remove it from the area where the program you're typing in will go.

Now, while keying in a listing from THE RAINBOW, whenever you press the downarrow key, your CoCo gives the check sum based on the length and content of the program in memory. This is to check against the numbers printed in THE RAINBOW. If your number is different, check the listing carefully to be sure you typed in the correct BASIC program code. For more details on this helpful utility, refer to H. Allen Curtis' article on Page 21 of the February 1984 RAINBOW.

Since Rainbow Check PLUS counts spaces and punctuation, be sure to type in the listing exactly the way it's given in the magazine.

10 CLS: X=256*PEEK(35)+170

Using Machine Language

Machine language programs are one of the features of THE RAINBOW. There are a number of ways to "get" these programs into memory so you can operate them.

The easiest way is by using an editor/ assembler, a program you can purchase trom a number of sources.

An editor/assembler allows you to enter mnemonics into the CoCo and then have the editor/assembler assemble them into specific instructions that are understood by the 6809 chip, which controls your computer.

When using an editor/assembler, all you have to do, essentially, is copy the relevant instructions from THE AAINBOW'S listing into CoCo.

Another method of getting an assembly language listing into CoCo is called "hand assembly." As the name implies, you do the assembly by hand. This can sometimes cause problems when you have to set up an ORIGIN statement or an EQUATE. In short, you have to know something about assembly to hand-assemble some programs.

Use the following program if you wish to hand-assemble machine language

listings:

10 CLERR200,&H3F00: I=&H3F80

20 PRINT "ADDRESS: "; HEX\$(I);

30 INPUT "BYTE"; BS

40 PDKE I, VAL ("&H"+85)

50 I=I+1:GOTO 20

This program assumes you have a 16K CoCo. If you have 32K, change the &H3F00 in Line 10 to &H2F00 and change the value of I to &H2F00.

The Rainbow Seal

The Rainbow Certification Seal is our way of helping you, the consumer. The purpose of the Seal is to certify to you that any product that carries the Seal has been physically seen by us, that it does, indeed, exist and that we have a sample copy here at THE RAINAOW.

Manutacturers of products — hardware, software and firmware — are encouraged by us to submit their products to THE ARINBOW for certification. We ascertain that their products are, in actuality, what they purport to be and, upon such determination, award a Seal.

The Seal, however, is not a "guarantee of satisfaction." The certification process is different from the review process. You are encouraged to read our reviews to determine whether the product is

right for your needs.

There is absolutely no relationship between advertising in THE RAINBOW and the certification process. Certification is open and available to any product pertaining to CoCo. A Seal will be awarded to any commercial product, regardless of whether the tirm advertises or not.

We will appreciate knowing of instances of violation of Seal use.

Elegant PAYROL/BAS Solves Payroll Headaches

Here's an office utility that will take care of your payroll chores — and then some. PAYROL/BAS is simple, but effective. You only need one drive and a printer. It can organize your office records and all but eliminate the calculator and charts in payroll work.

It calculates pay for up to 99 employees, including overtime (time and a half and/or double time), bonus, commission, F.I.C.A., four possible deductions, plus federal and state withholding. It also keeps track of holiday, sick leave and vacation pay. There's also provision for manual intervention if an employee needs special deductions or a special situation occurs and it is necessary to change the figures hefore a check is printed,

Deductions can be set up for each employee. Three regular deductions can be either a straight amount or a percentage of gross pay. These are automatically included in each pay for that employee unless you intervene. One added special deduction is allowed each pay cycle to allow for corrections, advances, etc.

The paycheck is printed with an itemized stub showing current deductions and year-to-date totals/ Printing the check automatically updates all employee data for the year.

PAYROL/BAS provides for reprints of checks spoiled in the printer and voiding of errors. It can also void checks that aren't approved later, but employee data in those eases must be corrected separately.

You wouldn't want to use this as a general cheekbook because it doesn't balance the account or reconcile the statement, but it can be used to generate checks for a payroll account and up to 29 additional ledgers.

This system is flexible enough to accept employees on various pay schedules. Yet it is savvy enough to keep all figures up to date so proper reports and payments to the state and IRS can be made. Make sure to back up the disk after each operation, and you'll have all the data up-to-date and handy through the year,

The optional 941 Program prints a report that can be used to complete the quarterly federal Form 941.

At year end W-2 forms are no problem. The optional W-2 Program has all the figures for each employee, lust choose that option from the menu (assuming you asked to have that included), load W-2s into the printer and that chore is done painlessly.

I've mentioned "options." Let me make things completely clear. PAYROL/BAS has these built-in features:

Employee File Maintenance All Regular Payroll Calculations Printing Checks Check Register Payroll Summary Individual Employee Statistics Search/Update Check File Year-End Housekeeping Basic System Cost = \$79.95

These options are extra:

941 Program \$29.95 W-2 Program \$29.95 Complete System Cost = \$139.85

Each system has tax tables for one state, You need a separate system for each state if your employees are spread out in different locations.

Howard Medical Computers can provide checks and W-2 forms or you can use your own printer stock, It is also possible to let the printer run out the figures to allow you to make the actual checks and forms manually,

The programs are written in BASIC, so custom changes can be made if you're so inclined. The system disk is not protected. You are urged to make backups of the system and all data disks.

The 43-page spiral-bound manual is well-organized and clear. You are walked through each item and there are sample reports. Most screens have instructions at the bottom. The index makes it easy to go back and find things you need help with. If you're still stuck, Howard Medical Computers can answer your questions by phone or mail, I wrote to them to clear up some points and had my answer within a week along with copies of letters from satisfied eustomers. They deserve an 'A' for customer and product support.

The program itself runs smoothly. Two words immediately come to mind: elegant and professional. The programmer has put lots of experience, logic and planning into this system. I really dug to see if I could find problems.

The system does not check input for invalid data. That means it can send out checks dated 13/99/86 or 02/31/86. Those checks would be hard to search for later because they don't have logical dates. Ms. Bernie Litton explains the code to check invalid data had to be eliminated to make room for tax tables in some states. There is just not enough computer memory,

The CLEAR key is not disabled and I accidentally hit it a few times. It's annoying but not fatal and they've agreed to add a touch here and there to make things a little easier for klutzy people like me,

The program also has no provision for 401-K deductions. Ms. Litton tells me there haven't been any requests for it. Let them know if you are interested in that.

This is an efficient way to reduce payroll work and to get employee information organized and under control. No need to search through old papers to see whether Sam or Sally has used up sick leave or vacation. Simply pull a stat sheet for one employee, all hourly employees or the whole

It's not too late to implement this system for 1986. Employee data can be easily edited. Just put in current yearto-date figures and go on from there.

(Howard Medical Computers, P.O. Box 2, Chicago, IL 60690, requires 64K, disk and printer, disk \$79.95 plus \$2 S/H)

Bob Dooman

There is absolutely nothing else on the Color Computer that is comparable to CoCo Max's power and ease of use. The most enjoyable time with a computer I ever had. Computerware Review May 1985

CoCo Max is the most incredible product ever incredible product ever marketed for the CC. No review can do it justice. I've never given any product a never given any product a never give Colorware's CoCo 10...I give Colorware's CoCo Max (Hardware, Software and Documentation) a 10!

I never expected to see anything like it on my CoCo screen. There isn't a single command to remember. Even a person who has no drawing ability like myself can create a presentable picture. I've spent hours just doodling enjoying all the things from silly to the serious. Fascinating experience. Buy it, you won't be sorry.

6809 Express May 1985

An outstanding program that almost turns your CoCo into a replica of the Macintosh. Terrific hi-res color, very easy to learn and use.
- Family Computing February

CoCo Max puts fun back into computing, offering a state of the art environment you find on much more expensive machines. Colorware has invested the kind of time and research that virtually secures its success, and that shows up on your screen.

The pack is well constructed, the user's manual is complete with illustrations and well organized. An outstanding buy for the performance. Colorware's advertisement accurately describes the product. Their delivery was timely as promised.

-Rainbow June 1985

These were reviews of CoCo Max I. CoCo Max II will blow your socks off with even more power!

- New bidirectional shrink and stretch
- New rotate function
- 9 new fonts (for over 200 typestyles)
- A new "Glyphic font" of small pictures
- A 68 page scrapbook

- Point and click to load files (no typing).
- Full error reporting, crash proof
- Custom patterns can be saved
- Printing in color (with CGP 115 or 220)
- Much more. (Note: CoCo Max II is available on disk only)

The reviews are nice, but see it for yourself* and draw your own conclusion.

"If you are not delighted with your CoCo Max II, we will immediately refund your purchase, including postage back.

COLORWARE

Call Toll Free 800-221-0916.

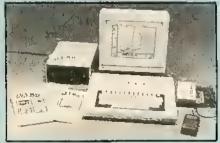

1986

For more information on CoCo Mex, turn the page.

Coo Max II

You'll use it all the time and love using it. What is CoCo Max? With the negativous can draw free

Simply the most incredible graphic and text creation "system" you have ever seen. A Hi-Res Input Pack (more on the pack later) is combined with high speed machine language software. The result will dazzle you.

CoCo Max disk system, with Y-cable.

Is CoCo Max for you?

Anyone who has ever held a pencil or a crayon for fun, school or business will love it. A 4 year-old will have fun doodling, a 15 year-old will do class projects and adults will play with it for hours before starting useful applications (illustrations, cards, artwork, business graphics, flyers, charts, memos, etc.) This is one of the rare packages that will be enjoyed by the whole family.

What made CoCo Max an instant success?

First there's nothing to learn, no syntax to worry about. Even a child who can't read will enjoy CoCo Max. Its power can be unleashed by simply pointing and clicking with your mouse or joystick. With icons and pull down menus, you control CoCo Max intuitively; it works the same way you think.

Don't be misled by this apparent simplicity. CoCo Max has more power than you thought possible. Its blinding speed will astound you.

It lets you work on an area 3.5 times the size of the window on the screen. It's so friendly that you will easily recover from mistakes: The undo feature lets you revert to your image prior to the mistake. As usual, it only takes a single click.

Later, we will tell you about the "typesetting" capabilities of CoCo Max II, but tirst let's glance at a few ot its graphic creation tools:

With the **pencil** you can draw Iree hand lines, then use the **eraser** to make corrections or changes. For straight lines, the convenient **rubberbanding** lets you preview your lines before they are fixed on your picture. It's fun and accurate. Lines can be of any width and made of any color or texture.

The paint brush, with its 32 selectable brush shapes, will adapt to any job, and make complicated graphics or calligraphy simple. For special effects, the spray can is really fun: 86 standard colors and textures, all available at a click. It's like the real thing except the paint doesn't drip.

CoCo Max will instantly create many shapes: circles, squares, rectangles (with or without rounded corners), ellipses, etc. Shapes can be filled with any pattern. You can also add hundreds of custom patterns to the 86 which are included.

The *Glyphics* are 58 small drawings (symbols, faces, etc.) that can be used as rubber stamps. They're really great for enhancing your work without effort.

Pull down menus

Zoom in i

Control Over Your Work

CoCo Max's advanced "tools" let you take any part of the screen, (text or picture) and perform many feats:

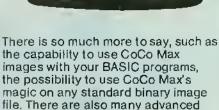

• You can move it around • Copy

it • Shrink or enlarge it in both directions • Save it on the electronic Clipbook • Flip it vertically or horizontally • Rotate it • Invert it • Clear it, etc. etc.

All this is done instantly, and you can always *undo* it if you don't like the results.

For detail work, the *fat bits* (zoom) feature is great, giving you easy control over each pixel.

To top it all, CoCo Max II works in color. Imagine the pictures in this ad In color. If you own a Radio Shack CGP-220 or CGP-115, you can even print your work in full color!

features such as the incredible lasso.

inside the Hi-Res input Pack

Why a Hi-Res Input Pack?

Did you know that the CoCo joystick input port can only access 4096 positions (64x64)? That's less than 10% of the Hi-Res screen, which has 49152 points! (256x192). You lose 90% of the potential. The Hi-Res input Pack distinguishes each of the 49152 distinct joystick or mouse positions. That's the key to CoCo Max's power. The pack plugs into the rom slot (like a rom cartridge). Inside the pack is a high speed muftichannel analog to digital converter. Your existing joystick or mouse simply plugs into the back of the Hi-Res Pack.

Electronic Typesetting..

You'll be impressed with CoCo Max's capability. Text can be added and moved around anywhere on the picture. (You can also rotate, invert and flip it...) At a click, you can choose from 14 bullt in *fonts* each with 16 variations. That's over 200 typestyles!

Printing Your Creations

There are a dozen ways to print your work. All are available with a click of your joystick (or mouse) without exiting CoCo Max. Your CoCo Max disk includes drivers for over 30 printers!

Colo Max II

The whole family will enjoy CoCo Max. Here are a few examples of the possibilities.

All these pictures are unretouched screen photos or printouts (on an Epson RX-80).

Coco (Alex III CoCo Max II Cotto Hox I CoCo Max II

(1) Logos end letterheeds.

System Requirements:

Any 64K CoCo and a standard joystick or mouse. (The koala pad and the track ball work, but are not recommended.)

Disk systems need a Multi-Pak or our Y-Cable. CoCo Max is compatible with any Radio Shack DOS and ADOS.

Note: the lape version of CoCo Max includes almost all the features of CoCo Max II except Shrink, Stretch, Rotate, and Glyphics. Also, it has 5 fonts instead of 14.

CoCo Max is not compatible with JDOS, DoubleDOS, MDOS, OS-9, the X-pad, and Daisy Wheel Printers.

Printers Supported:

Epson MX, RX, FX and LX series, Gemini, Slar, Micronix, Delta 10, 10X, 15, 15X, SG-10, Okidata 82A, 92, 93, C. Itoh Pro-writer, Apple Image-writer, Hewlett-Packard Thinkjet, Radio Shack DMP 100, 105, 110, 120, 200, 400, 500, Line Printer 7, Line Printer 8, TRP-100, CGP-220. (DMP-130 use Line Printer 8), PMC printers, Gorilla Banana. PMC printers, Gorilla Banana. Color printing: CGP 200, CGP 115

Pricing

CoCo Max on tape \$69.95 with Hi-Res Pack and manual. CoCo Max II (disk only).......... \$79.95 with Hi-Res Pack and manual. Upgrade: CoCo Max to CoCo Max II New disk and manual......\$19.95 New features of CoCo Max II: 14 lonts and glyphic lont, dynamic shrink and stretch, rolate, multiple drive capability, 68 page scrapbook, point and click lile load, color printer drivers, full error reporting. Upgrade: CoCo Max tape to disk manuals, disk and binder \$24.95 Y-Cable: Special Price \$19.95 Super Picture Disks #1, #2, and #3 each: \$14.95 All three picture disks \$29.95

> Guaranteed Satisfaction Use CoCo Max for a full month. If you are not delighted with it, we will refund every penny.

Font Editor Option

A font is a set of characters of a particular style. CoCo Max includes 15 fonts. You can create new tonts of letters, or even symbols or graphics with the font editor. Examples: set of symbols for electronics, foreign

Video Digitizer DS-69

This new Low Cost Digitizer is the next step in sophistication for your CoCo Max system. With the DS-69 you will be able to digitize and bring into CoCo Max a trame from any video source: VCR, tuner, or ivideo camera. Comes complete with detailed manual and C-SEE software on disk. Multi-Pak is required.

Why do more CoCo owners choose 'REAL TALKER'?

Sure it's priced right, but there's more...

Thousands of 'Real Talker' owners know 'Real Talker' beats ALL other Coco voice synthesizers in ease of use and ilexibility. And, NO other Coco talker has a clearer, more intelligible voice. That's quite a lot of advantage when you consider Real Talker's unbeatable price. Yet, Real Talker has some important features that you simply will not find in other Coco talkers:

'Real Talker' is compatible with any 16K, 32K, 64K Extended or non-extended Color Computer. It works with any cassette or disk system and comes complete and ready to talk through your T.V. or monitor speaker. Price includes the 'Real Talker' electronic voice synthesizer in a ROM pack, software on cassette (may be transferred to disk), and user manual.

'SAY' command - You'll have your computer talking brilliantly in just minutes thanks to this powerful new command. Type SAY "ANYTHING YOU WANT" and your words are instantly spoken. It's that simple. Think how easy this makes creating speaking Basic programs. Adding speech to your existing programs is a snap too,

'CONVERT' - This is a truly powerful command for the basic programer. CONVERT automatically transforms a machine language dependent speaking program into a stand-alone Basic program. In other words, you can effortlessly write speaking Basic programs that do not require a machine language translator in memory. This is a unique feature of 'Real Talker'. No other voice synthesizer gives you anything even remotely approaching this type of capability even synthesizers costing considerably more.

'Real Talker' is a full-featured electronic voice synthesizer unit built into a compact cartridge case. You simply plug it into the side of your computer.

NOW INCLUDED WITH 'REAL TALKER'......

- 1. 'DR. TALK-This interactive "Eliza" type psychoanalyst program will discuss your innermost problems at length.
- 2. TALKING BATTLESHIP' It's you vs. the computer in this speaking version of the classic game.
- 3. TALKING BLACKJACK'- Play for big stakes against a rather talkative casino dealer.

\$5**9**95

Other features include software controlled pitch, unlimited vocabulary text-to-speech, and even a program that will recite any ASCII file (such as from Telewriter-64 & other word processors). You also get Colorware's unique full-screen phoneme editor program that let's you experiment with and modify speech at it's most fundimental level.

'REAL TALKER-1' (for the original Color Computer)......\$59.95 'REAL TALKER-2' (for the Color Computer-2)......\$64.95

TALKHEAD

If you have a 'Real Talker', do not deprive yourself of this absolutely incredible machine-language Talking Head simulation program. While other talking head simulations use a minimal cartoon-like face, TALKHEAD uses high resolution, full-screen, digitized images of an actual person's face to create a life-like animated effect.

SOFTWARE FOR THE 'REAL TALKER'

TALKHEAD can be easily commanded in Basic to appear on screen and say anything you want. Available on cassette or disk for only \$19.95, TALKHEAD requires 64K and a Colorware 'Real Talker'.

ONLY\$19.95

Pegasus — The Mystical Flight Instructor

You are sitting on a quiet beach looking out over a stretch of calm ocean. In the distance an ominous island sits just at the edge of sight. A shiver runs down your spine and you don't know why. Pegasus, your trusty steed, stamps impatiently. The small black birds you thought you saw earlier are now close enough to explain the unease you've felt all morning — Phantom Riders!

Pegasus leaps into the air with only the slightest encouragement to meet the deadly black foes and their masters. The sea begins to churn as the sharks sense the coming of breakfast. Who will be victorious, the Good Guy(s) on the white horse(s) or the Bad Guys on the black horses?

Yes, boys and girls, we've just been tossed back into a mystical time of flying horses, black phantoms and firebelching sea monsters. Pegasus and the Phantom Riders is the latest in arcade-type game action from our friends at Tandy. Licensed by Spectral Associates to Tandy and written by David Figge, this game requires a Color Computer with one disk drive, 64K of RAM and at least one joystick. If you have a Multi-Pak Interface and the Sound/Speech Cartridge, I'm told you'll have more realistic sounds to go with the game. (I don't own this equipment and couldn't verify this claim.) This game comes on an unprotected disk that allows for backups and is professionally packaged and documented. The game has a pause feature and lists the last five high scores. The closest "real" arcade game to this is probably Joust.

The game is started by typing DOS or RUN "PEGASUS" and the title screen with scores asks for one or two players, If you pick two you can then choose between Duel or Cooperate mode. The first screen is pretty much as the flowery opening of this review states but you won't believe the graphics! They are done in PMODE 4 type with the artifact colors and details that are just unreal. I presume Mr. Figge has been using one of the latest graphics generator programs because there are textures and colors and details I've only scen in the "CoCo Gallery." There are four different screens, starting from the Good Guys' land with the Bad Guys' island in the distance (easiest), to the lagoon of the Bad Guys' island (hardest).

The play is somewhat straightforward; to fly Pegasus you flap his wings by pushing the firebutton on the joystick one push, one flap. The more you flap the higher he goes

See You at RAINBOWfest-Chicago May 23-25

until he hits the sky (top of screen) and rebounds from it in direct proportion to the speed with which he hits it. If you stop flapping, gravity takes over, though there is apparently some form of momentum in this mystical land. Motion in other directions is controlled by the left/right motion of the joystick.

To destroy the enemy, you need to kick the Phantom's horse (Pegasus is kicking while he's flapping). You must be slightly higher than the enemy to kill him. If you're dead even, you'll just bounce off each other and il you're below him, you become shark bait and lose one of your four lives. If you win the kicking battle, you shoot off in the opposite direction with a fair amount of velocity to overcome.

Points are scored for kicking the black horse, which kills the horse but not the Black Phantom. The Phantom falls to the ground unless you can catch him, a most remarkable feat. If the Phantom is allowed to crash to the ground, a grave is erected. If you kick the cross above the grave, you score more points for destroying the Phantom's grave. If you don't destroy the grave, the Phantom is resurrected after a period of time and you fight him again. Each screen gets more difficult because there is less area to land Pegasus for rest and there are more phantoms. In fact, on the third screen the kraken, a sea creature, starts belching fire.

If all this sounds confusing, it is, I still don't feel very comfortable flying Pegasus. But since I'm not the greatest arcade-game person in the world, I thought it would be wise to try this game out on one more adapted to this sort of thing - my 12-year-old son, Tim. I handed him my brand new deluxe joystick and walked into the next room,

Several hours later he was still mumbling under his breath what a dumb game this was and it was no fair and stupid. Well, that was last week. Now it's "Hey, Dad, I just beat the 50,000 high score." There is a recommendation buried in here somewhere and I think it says this game is for those who like a stiff challenge.

We agreed the worst part of game play was having to repeatedly hit the firebutton on the joystick to make Pegasus fly, to say nothing about how often I'm likely to have to replace that button. Tim was also distressed when he found he couldn't save his high scores to disk.

The documentation is a well-written booklet that is 10 pages long and filled with everything you need to know, including turning on the computer. The manual also has two appendices, one contains disk format and backup instructions and the other explains using the sound cartridge and Multi-Pak. Also included is the software registration card and change of address cards. There is one addendum with my manual describing how to run *Pegasus* without the DOS command. The only ommission I found was the fact that you get an extra man (horse?) when you score 10,000 points. Actually, Tim discovered that; I haven't scored enough points yet!

Should you buy this game? If you have an old, arthritic firebutton finger like me, maybe you should stick to checkers or the like. However, Tim says if you can get used to the flying action, it's a great game. It is available at your local Radio Shack store, so go take one for a test flight, but don't expect to instantly master the game.

(Radio Shack stores nationwide, Cat. No. 26-3281 Tandy, disk \$24.95)

XMENU Can Tie OS-9 Utilities Together

XMENU is a program that helps a programmer create a menu-driven environment for OS-9. While I think this program will be best appreciated by a programmer who is writing software for someone not interested in the details, in general, XMENU is a tool that can help tie many separate OS-9 software products or procedures together into a single integrated system. This can benefit the experienced hacker and the novice user as well as the end user of a software package.

Software designers can concentrate on the technical aspects of the program and then use *XMENU* to provide the menu interface for the customer who may or may not be concerned with how the program goes about accomplishing whatever it does. The OS-9 user can use *XMENU* to tie together all those utilities that are used daily into one program.

XMENU comes with 12 pages of documentation, but this is sufficient for anyone with experience with OS-9, no matter how little. As with MicroTech Consultant's products XTERM and XWORD, XMENU works with PBJ's WordPak. As a matter of fact, WordPak is recommended for the best efficiency of memory and ease of use.

XMENU uses about 16K of your memory and OS-9's overhead takes another 20K. If you use a Hi-Res program to give you something other than 32 columns, that takes up even more memory. As you will quickly realize, memory can become very precious. That is the main reason an 80-column board is good to have with XMENU.

XMENU is fairly easy to implement and incorporate into your programs, thus chaining your many programs together into one main program. A sample menu is even included on the disk. The manual goes through a few examples that demonstrate the process of creating and modifying a menu very well. Of course, you can have one menu call another and chain any number of programs together even across different diskettes.

Overail, XMENU can be extremely useful to those programmers who have many programs they would like to incorporate into a larger, but still manageable menu-driven package, either to market or for personal use. While the documentation is not extensive, the examples are well-done and explained, making the documentation adequate.

(Microtech Consultants Inc., 1906 Jerrold Avc., St. Paul, MN 55112, \$29.95, with source \$59.95, plus \$3 S/H)

- Dale Shell

Superdisk Cuts Routine Operations Down to Size

Superdisk is a handy disk utility that will save you a lot of time and effort doing routine operations on your CoCo. The program is supplied on a single diskette that is not copyprotected. Backup copies for your own use are encouraged.

The program is menu driven and very user friendly. The

main menu provides these features:

1) A two-column, on-screen disk directory with numbered file identifiers. Simply type in the two-digit filename identifier, press ENTER and the selection is loaded.

2) A DIRECTORY BACKUP command is provided. This can be a real lifesaver if your disk directory ever

becomes damaged.

3) With PROMPTED COPY you can perform a single drive copy or, with two drives, copy 0 to 1 or 1 to 0 by simply

entering the file identifier number.

4) The READ or MODIFY function displays on the screen a particular sector and track in hexadecimal and ASCII format. You can then page up and down in the file and enter the edit mode to make changes. Although this is a powerful feature, it must be used wisely. The program is not a tutorial on machine language or disk file modification, so care must be exercised. Use your backup disk.

5) PROMPTED KILL is also provided. This allows killing of unwanted files after answering 'Y' or 'N' to allow a last chance to abort your decision if you made a mistake.

6) A printed directory is also provided. You can name, rename and date your disk directory. The directory is printed in two columns with a file identifier number, file and disk name.

The documentation consists of four typewritten pages of instructions that are easy to read and understand. Also included is a modified plug that fits into the right joystick socket and must be in place for proper program operation.

I found Superdisk to be very useful and with many features to make your CoCo even easier to use. At only \$9.95, I think it's a bargain.

(Sunrise Software, 8901 NW 26 Street, Sunrise, FL 33322, \$9.95)

- David Gerald

Hint . . .

Disk or Cassette I/O Errors?

Make sure the disk drive(s) and cassette recorder are not on the left side of the TV set (or if they are, that they're at least six inches or more away). This is because a TV set's flyback transformer, almost always on the left side of the set, puts out a strong magnetic field which can interfere with cassette or disk operation.

Back Issue Availability

Back copies of many issues of THE RAINBOW are still available.

All back issues sell for the single issue cover price. In addition, there is a \$3.50 charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by United Parcel Service. There is a \$5 charge for the first issue, plus a \$1 charge for each additional issue on orders sent by U.S. Mail. UPS will not deliver to a post office box or to another country.

Issues July 1981 through June 1982 are available on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 5 percent state sales tax. In order to hold down costs, we do not bill and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To order, just fill out the form on the next page and mail it with your payment to:

THE RAINBOW

The Falsoft Building P.O. Box 385 Prospect, KY 40059

Students Learn at the Trading Post

As a sixth grade teacher and the computer coordinator for my school district, I am always looking for good programs that challenge as well as stimulate students. When I received Trading Post 1 was eager to see if Sunburst Communications' program was as good as its attractive package and documentation. I have seen Sunburst software written for the Apple 11 computers and was very impressed with it. Virtually all of their programs are designed by professional teachers or professors, then programmed by a computer programmer. This way they can get the best of both the teaching professional and computer specialist. It is nice to see companies that market predominantly Apple or Commodore software expand their market with CoCo software,

When evaluating software, I have found that if I can start up and run a computer program without looking at the manual I probably have an above average program. I could do this with Trading Post. It has the loading instructions on the disk and all the instructions to run the program are in the program. I didn't even need the documentation to use this program, though it was nice to have. It includes worksheets that can be reproduced to help students develop strategies for reaching their trading goals. There is also a scope and sequence of objectives for the program, as well as a computer section that gives you a step-by-step procedure for turning on, running and ending the program.

Trading Post is designed for students in the third to seventh grade. Players try to obtain goods by trading what they have for what they need. The object is to be the first person to collect all the shapes needed to match a goal selected for them by the computer. Each player takes a turn in which they can choose to get a random object from the computer, to trade what they have according to a set of exchange rules to obtain other items, or see if they have reached their goal. They choose "goal" when they think they have everything needed to match their trading goal and the computer checks to see if they are right. If they are right they get a point; if they are wrong they lose their turn. When their goal is reached twice, they win the game. There are three levels of play: beginner barterer, assistant swapper and terrific trader. Each level increases in difficulty to make it more challenging for older students.

I like this program. The graphics are well-done and the objectives are appropriate for a classroom or home setting. The documentation is complete and the program easy to work with and understand. I do think that the price for the program is a little steep for home use, but shouldn't be a concern for schools.

(Sunburst Communications, 39 Washington Ave., Pleasantville, NY 10570-9971, requires 32K ECB, \$59 per disk or \$177 for computer lab package)

HOW DO YOU SHARE A RAINBOW?

It's simple — Give a RAINBOW gift certificate . . .

Share THE RAINBOW with your friends a gift subscription to the premier information source for the Color Computer. Then, each month, all year-round, they'll enjoy the spectrum of RAINBOW programs, articles and information written exclusively for their CoCo!

First, they'll receive a handsome card announcing your gift. Then, they'll be reminded of you each month when they receive up to 300 pages of THE RAINBOW — including as many as 24 programs, 15 regular columns and up to 20 product reviews.

When you give a RAINBOW gift certificate, you'll also be safeguarding your own collection. No more frantic searching for those back issues you've lent to a friend.

Give a RAINBOW gift certificate and let your friends in on something you already know — THE RAINBOW is the perfect companion for the Color Computer!

Please	begin	a e	one-year	(12	issues)	gift	subscription	to
THE RA	INBOW	for	r:					

Mail to:

Rainbow Gift Certificate, The Falsoft Building, P.O. Box 385, Prospect, KY 40059

To order by phone, call: (502) 228-4492

U.S. currency only, please. All subscriptions begin with the current issue. Please allow 5 to 6 weeks for delivery. In order to hold down non-editorial costs, we do not bill.

Color LISP is a New Language for CoCo

A new language for CoCo! I was really happy to get a shot at reviewing something as exciting as this. It's fun to exercise your mind with something new.

LISP is a list processing language similar in some ways to FORTH, including an awkward way of handling mathematical formulas. For example, BASIC's ? 2+2 becomes (+22) in LISP. There are new programming terms to learn, ATOM, LIST and PREDICATE, among others. Spacing is very important and everything is written within parentheses.

Frost Byte offers Color LISP as a "minimum implementation" so we can begin to experiment with artificial intelligence. It's available for either cassette or disk. Except for disk operations, both versions have the same commands and functions.

Color LISP does come with a 26-page printed manual that explains the syntax of commands, but it is definitely not a tutorial on the language. The manual suggests several books for learning the language. None of the computer shops or book stores around north suburban Chicago had anything on Ltsp. I had to resort to a major library search to find any help. I did finally get all the books they suggested, but much of what I found doesn't seem to work with this version of LISP.

The manual was confusing to me. The syntax examples show square brackets when they mean parentheses. And several other examples typed out of the manual produced a frustrating error message. I tried both the tape and disk versions with the same result.

This is definitely not a package for the uninitiated. There is no LtSP software available for CoCo. But if you already speak LtSP, here's an interpreter that will make your CoCo understand you. Frost Byte does solicit contributions to their Software Submissions Program.

(Frost Byte, P.O. Box 169, Underhill, VT 05490, cassette \$39.95 plus \$2 $\mathrm{S/H}$)

CoCo Knitter — A Real Purl for Volume Producers

The idea behind CoCo-Knitter, from Sugar Software, is a good one: using the computer to produce individual sweater patterns for classic sweaters ranging in size from babies through adult male. The program produces patterns for cardigans or pullovers, with round or V-neck, raglan or set-in sleeves, in any of the three standard yarn weights (fingering, sport and worsted). The cardigan pattern includes a one-inch wide garter-stitch front panel for the buttons and button holes. The desired pattern can either be displayed on the screen or printed out.

My collection of knitting pattern books and magazines goes back 25 years, so to test this program I did not actually knit any sweaters, but compared the patterns generated by the program with patterns I have used in the past. In general, there was good agreement between the two. The one major difference is that CoCo-Knitter instructs the user to bind off the stitches at the neck then subsequently pick them up for the neckline ribbing. Other knitting sources instruct the knitter to place the center stitches on a stitch holder and use these for the ribbing. The latter method produces a neater neckline and is also much simpler.

The program's patterns suffered from minor typos and in some cases omitted the number of purl stitches for the ribbing. Although the booklet states that the program is designed for an 80-column printer, the printed pattern produced is only 32 columns wide. The screen display occasionally splits words in an undesirable fashion.

An experienced knitter would have no difficulty following the patterns to produce sweaters, but a beginner would probably need a good introductory text. The instruction booklet accompanying the program details how to load the program and use it, as well as specifying stitch gauges for the different yarn weights. It does not include the type of instructions common in knitting books on how to test stitch gauge, or finish and block the pieces. There are no photographs of various finished sweaters in the leaflet, although most knitters enjoy seeing pictures of the finished product, even when the sweater is of a classic type.

The real usefulness of this program seems to be for the knitting shop owner who could knit some models and then quickly produce an individualized pattern for each customer. People who hand-knit sweaters for bazaars and craft fairs where large numbers of sweaters in a complete size range must be produced would also appreciate the ease with which a printed pattern is created. I could find no current book that covered the entire range of sizes and types included in the program, and a person wishing instructions for all the sweaters in the program would need about six separate leaflets.

For volume production, CoCo Knitter is a good timesaver well worth the price. But it is, perhaps, a bit expensive for the average home craftsperson.

(Sugar Software, 1710 North 50th Avenue, Hottywood, FL 33021, 32K ECB disk or tape \$24.95 plus \$1.50 S/H)

- Carol Kueppers

15-Meg Hard Drive Accelerates CoCo's Power

I remember it was an overcast day in Southern California as I carried that box into the computer room. This 15-Meg Hard Drive was only 14 by 15 by 4 inches, but little did I know what power it would unlock in my Color Computer. You see, my Color Computer (named CC) is just a little guy, someone who helped me with my work and never demanded at all. But boy, did he change on that day!

After carefully removing the hard drive from its box, I placed it on the desk to the right of CC. He just sat there with a blank look on his screen (the power was not on yet). After plugging in the power cord from the accessory kit and putting in the first key, the power switch, I placed the second

key in a safe place (my software fire safe).

Next, I opened up the Hard Disk Controller (Cat. No. 26-3145) and plugged it into Slot 3 of the Radio Shack Multi-Pak Interface. After plugging in the 50-pin cable in the back of the hard disk drive, I powered up the system.

CC's screen glowed green waiting for me to boot up OS-9 and get to work. After typing in the date and time CC came to life with, "Hello Steve, what are we doing today?" This is the way CC addresses me (by using Speech/Sound Card) when first powered up.

"Well CC," I said, "today I am adding a Hard Drive to

your system!"

I told CC that a hard drive is a high speed, high density mass storage device. The one I selected is Tandy's 15-Meg Primary Hard Drive (Cat. No. 26-4155). This drive can store up to 93 disks of data that can be accessed up to 20 times faster. Now with this added power you should be able to keep up with those so called "big computers."

For CC to use the hard drive under OS-9, I needed to load in the device descriptor (H0) for the 15-Meg and CCHDISK driver into memory. Every I/O (Input/Output) device must have a software driver so the computer can

communicate with it.

"Hey Steve, I still can't see the Hard Drive!" CC said in a demanding voice. I think CC was in a hurry; I had not even linked the device yet. To load and link in the drives for the hard drive for the first time it is necessary to type:

LDAD /D1/MDDULES/H0_15.DD LDAD /D1/MDDULES/CCHDISK.DR LINK H0

(Note: The MODULES directory is on the CONFIG disk of the OS-9 2.00.00 upgrade)

"Steve, I can communicate to the hard drive now, but I can't read anything off of it."

True, CC could not read the drive yet. Just like a floppy disk, the computer can't read (or write) anything to it until it has been formatted.

After CC took about 10 minutes to format the hard drive, I was all ready to copy the system commands to it.

First, I told CC to make a CMDS directory on the hard drive by typing in MAKDIR >HO/CMDS. "That was fast!" CC exclaimed. I was also surprised at the speed the command was executed.

Next I had CC copy the CMDS directory from a system disk to the hard drive. Once again it was about five times

faster then just using a floppy drive.

Once the commands were on the hard drive, I could have CC read them. So I typed in EHX /HØ/EMDS. Now, for the real test, to have CC use only the hard drive to do something, I typed in DIR /HØ/EMDS. Within a second CC was displaying the command's directory. It was as fast as a RAM drive I had been using until now.

"Hey Steve, I really like this, this is better then that RAM drive. Besides having more room, the data is still there after

the power is turned off,"

Needless to say CC and I spent the next few days playing with the new toy. I copied all of my OS-9 software to the hard drive. At this time I have only used approximately 25 percent of the space on the disk.

The only disadvantage with CC running the programs so much faster is that he now complains about how slow I am.

He has gotten so demanding these days!

This hard drive system from Tandy is only for use with the OS-9 (2.00.00 or later) operating system and will not work with Microsoft Extended Disk BASIC. If you want to use the Tandy Hard Drive with any other operating system besides OS-9, you must write your own software drivers for it.

Included with OS-9 Version 2.00.00 are the device drivers and descriptors for using the 15-Meg (Cat. No. 26-4155, \$1,595) and 35-Meg (Cat. No. 26-4171, \$2,995) hard drives. The Color Computer Hard Disk Interface (Cat. No. 26-3145) sells for \$129.95. At these prices, it's unlikely numerous hard drive systems will be sold. But for users like me, the hard drive is well worth the price.

The 15-Meg Hard Drive system was faster than I expected it to be. Almost as fast as the RAM drives I had been using to speed up my disk I/O. Of course the hard drive has 14,500,000 bytes more and does not lose the data when power is turned off.

One-On-One Basketball Scores High

Basketball: slam dunks and three-point plays, percentage shots and fade-aways, baseline jumpers and "in yo' face,"

Larry Bird and Dr. J. . . .

Wait a minute! The Bird Man and Dr. J.? We're talking serious round ball now. And that appears to have been the goal with *One-On-One*, Tandy Corporation's latest contribution to the world of Color Computer sports. They even went so far as to solicit ideas from the principals who inspired this make-believe match-up. That's right. Larry Bird and Julius Erving actually assisted in the design of this game. Good move, Tandy.

To play One-On-One you'll need a Color Computer with 64K memory, one disk drive, a television (preferably color) or monitor and at least one joystick — two if you want to play against a human opponent. (And you will want to unless you enjoy being humilated by your CoCo.) You can try several variations of the game by choosing from the following options:

- I. Game type
 - 1) One on one
 - 2) Winner's outs
 - 3) Loser's outs
- II. Level of difficulty
 - 1) Park and rec
 - 2) Varsity
 - 3) College
 - 4) Pro
- III. End of game
 - Timed game (two, four, six or eight minute quarters)
 - 2) Set score (any number of points less than 100)
- IV. Play mode
 - I) Either player against the computer
 - 2) Two players

In any basketball game, computerized or otherwise, you would expect to see slam dunks, steals, rebounds, blocked shots, fouls, free throws and a scoreboard clock. If you're the demanding type, you might feel a little disappointed without a 24-second shot clock or the opportunity to witness a fancy, turnaround jump shot. In addition to all the aforementioned, *One-On-One* includes such neat features as slow-motion replays, three-point shots, a fatigue factor

Visit the Coco Community Center THE RAINBOW'S CoCo SIG on DELPHI

for each player, which is continuously monitored on-screen, a backboard that shatters under the strain of a particularly ferocious dunk and the finger-pointing fellow in the striped shirt who comes running out on the court blowing his annoying little whistle at the most aggravating times. All these ingredients form a combination that gives a good "feel" for the game.

However, I believe One-One can be improved. I offer the following suggestions/comments: 1) While the documentation is clear and well-presented, I think the addition of a glossary of basketball terms would be a welcome enhancement, particularly for those not so familiar with the game. 2) The graphics are well-done but the sound effects are very unimaginative. 3) I would really like to see that three-point shot go in occasionally, especially when my opponent has a big lead. 4) Perhaps the most serious oversight is the fact that the scoreboard does not show the quarter or the number of timeonts each player has remaining. Granted, these are minor faults. At the same time, they are weaknesses that can be corrected by a few minor program changes. 1 believe it would be worth the effort and would make a good product even better.

In summary, the positives of this game far outweigh the negatives. Anyone looking for a fast-paced game that requires both coordination and quick thinking will not want to pass this one off. Tandy has a winner with One-On-One.

(Tandy Corp. available in Radio Shack stores nationwide, requires 64K, disk \$39.95)

Adventure Winner Rescue on Alpha II is Fun and Tricky

You are an agent from the Galactic Secret Service sent to the planetoid Alpha II to rescue a kidnapped professor and his invention, the Biotron. Once you have found them you must destroy the planetoid.

The professor was kidnapped by Zarkon, an evil space wizard. He is holding the professor in a bunker on Alpha II. Using the Biotron, Zarkon has made an army of mutated monsters, which include numerous sand snakes and the deadly Gorma.

Rescue on Alpha II, by Mitchell Software, is a graphics Adventure game that requires a 32K Color Computer and is available in either cassette or disk format. The disk version is the subject of this review. Rescue on Alpha II is written in BASIC and uses the Hi-Res screen for both text and graphics. The upper half of the screen displays a picture and the lower half provides a description of the surroundings. Since the program is written entirely in BASIC, screen update is slow unless your system supports the high-speed POKE.

At the start of the game, you are beamed down to Alpha II without equipment, weapons or supplies. The beaming device only works in one direction, so you must find another way home. You must go to the bunker and look for objects that will help you get past the monsters and find the professor. Each game is different in that the objects are

TRS-80 is a trademark of Radio Shack, a Tandy corporation.

placed in different locations. The robot guards shoot at you and if they're lucky, destroy one of the objects you are carrying. You must also beware of the killer robots. If you're lucky enough to make it past the robots, you face the sand snakes, the Gorma and, of course, Zarkon. Finally, if you find the professor and his equipment, you must overload the bunker's reactor and escape before the planetoid explodes.

The game has a small number of verbs it understands, which makes it harder to play at times. You type commands in two-word phrases like GET GUN. The graphics are welldone with a three-dimensional view of the room or hall. As with all Adventure games, it helps to draw a map of the places you've been to.

The program is well-done but has one major flaw, which seems to be inherent in many Adventure games - no SAVE feature. I find it hard to believe that even the author can play the game straight to completion without going buggy. Maybe some die-hard Adventurers will be able to complete an Adventure in one sitting, but the average mortal must get up in the morning for school or work!

Many readers will remember this game as the 1984 RAINBOW Adventure Contest grand-prize winner. That version would only run on a tape system. The author has rewritten the program to operate on a disk system as well as a tape system. The disk version uses a number of disk files for storing parameters that control the game. Thus, the disk must remain in the drive while playing the game, I should also point out that the game is not copy-protected, so it is easy to make a backup copy for your personal use. Rescue on Alpha II is a good game with some tricks and some tricky areas. It is overall a very pleasing game.

(Mitchell Software, P.O. Box 194, Tomahawk, WI 54487, 32K cassette or disk \$14.95)

Christopher L. Dollberg

One-Liner Contest Winner . . .

CoCo Windows is Well-Programmed and Useful

There's another "other guy" out there working the Sierra Software Mine in the badlands of Utah named Bob. He's teamed up with the first "other guy," Joe. Joe and his sidekick, Bob, rode into town not long ago. After they loaded up their wagon with supplies and whatever gear software prospectors need (a lot of coffee, I bet!) from the general store, they stopped by the Wells Fargo stagecoach station and shipped off a shiny new program, CoCo Windows, for the folks back at THE RAINBOW Ranch in Kentucky to look over.

CoCo Windows is a combination utility/applications program. Unlike most of The Other Guy's Software, it can be backed up to a working copy. Not only that, but the copy you buy is personalized at no extra charge. Your name appears in the title billboard and on every last backup you make. So, if an "unauthorized copy" of your original is circulating, you'll find yourself well-known before long!

Boot up is to a Hi-Res screen editor with key-click plus some options. You can change screen color, for instance, with a two-key command, using CLEAR along with a letter, or toggle reverse color via an ASCII command — CHR\$(12) not particularly elegant, but reliably functional. Another two-key command brings up an easy and handy autonumbering, within a window, for BASIC programming.

Now they could quit with a program fairly priced at \$20, but they don't. The screen editor is just the beginning. BASIC programs can be loaded and run, and during the course of the run other CLEAR-plus-character combinations call down such features as a calculator window, capable of four arithmetic functions on values of -1 E38 to +1 E38 and offering 10 memory storage locations corresponding to the keys 0-9; a window with a menu permitting the simple change of printer parameters from the CoCo defaults; and a window whereby the keys of the Q-P row may be programmed, in several storable routines, as PC-style function keys, RUN, SAVE, LOAD and so on when used along with CLEAR, the "control" key.

And as if all that weren't enough, you can create windows of your own preference, ranging from 48 by 22 rows down to 3 by 1 and containing text, numbers or graphics. Again, the procedure is by a series of CHR\$ numbers representing characters, rows and starting points on the 'X' and 'Y' axes. The number of windows that can be created is limited only by the amount of memory available.

See You at RAINBOWfest-Chicago May 23-25

There are no bugs in the program itself, However, there is a fundamental limitation — essentially that of the hardware - that keeps CoCo Windows from becoming the CoCo's applications answer to the PC's Sidekick. The "Applications" section of the documentation describes the technique for incorporating CoCo Windows into a BASIC program, as well as calls from a machine language program. In practice, however, I found that only a limited number of programs in BASIC — and none of the ML programs in my library, not even those restricted to the lower 32K would support CoCo Windows. A program either crashed or hung up if it had an ML routine of any kind in it: sort, spooler, etc. Elite*Calc 1.2, for instance, even after cutting out the Hi-Res title screen and using the old 32K boot, simply hung up with garbage on the screen. Master Writer booted to its main menu, but crashed at the first command from that menu. And finally, The Other Guy's own OmegaFile crashed on loading. I don't have access to the hardware to try it, but I suspect that like Sidekick, CoCo Windows can be loaded and used successfully in the next upper bank of a 128K RAM machine,

In any event, CoCo Windows is a well-programmed piece of software. In spite of the hardware limitations, it is useful even on a 64K machine, much more so on a 128K, and well worth its very modest price.

(The Other Guy's Software, P.O. Box H, 55 N. Main, Logan, UT 84351, disk or tape \$19.95 ptus \$2.50 S/H)

S.O.S. to the Programmer's Rescue

By Donald L. McGarry

CoCo has grown up; I'm sure of it. It must have. Another disk operating system (DOS) has arrived for it and this one is special. CoCo can now operate under a variety of DOSs, and a sure sign of a mature machine with a mature group of users is a variety of disk operating systems, each suited to a set of specific jobs. Computers function with only one DOS, but no DOS is perfect for all situations and Disk Extended BAStC is no exception. Even if you aren't interested in learning the ins and outs of a new DOS, read on. S.O.S. from Soistmann Enterprises has something for almost everyone.

S. O.S. runs only on a CoCo with 64K and Disk Extended BASIC. J & M disk controllers are OK. It doesn't support BASIC; it is designed to run machine language programs only. It has no built-in tape routines, so it must be used with disk drives. It can handle up to four physical drives. The drives can be 35-, 40- or 80-track, any standard step rate, single- or double-sided. These drives can be intermixed in any combination with no problem. This is a boon to those of us who invested in high performance double-sided drives hoping that one day they would be fully supported.

S.O.S. also handles all screen, keyboard and printer functions. In fact, after S.O.S. is configured and installed for a system, it runs in 64K mode and doesn't make use of

Printer options include any combination of line feed and carriage return, seven or eight data bits, and any standard Baud rate. Those with expanded keyboards have the ability to use the extra keys as well as a control key. The keyboard drivers also provide automatic key repeat. There are many more enhancements and options, but I think you get the point. S.O.S. can be configured to take fullest advantage of almost any CoCo system no matter what goodies have been added.

Since there are other DOSs available, there must be a reason for S.O.S. and a reason for my enthusiasm about it. Compared to Disk Extended BASIC, S.O.S. is like a gold mine to machine language programmers. Disk BASIC officially supports only one rather low-level system call. Any program written to run under it must use only this call or risk incompatibility with past and future releases from Radio Shack. S.O.S., on the other hand, supports at least 90 documented system calls. Some of these are simple, such as a call to wait a fixed amount of time; others are complex, such as finding a filename in a directory and returning with its location. Writing machine language programs under S.O.S. is infinitely simpler and less bug-prone than writing programs under Disk Extended BASIC.

Before going on I should point out that other DOSs, such as OS-9, have large numbers of documented system calls. S.O.S. has one big advantage over most of these, especially OS-9. S.O.S. is small. With three files open, S.O.S. leaves 54.000 bytes open to the programmer. This is much more

room than OS-9 leaves for programs and data.

No matter how complete the set of system calls, a DOS is no more useful to the average user than the programs that can run under it. If S. O.S. was only an operating system for machine language programmers, it would be some time before a large number of user programs became available. Soistmann Enterprises has been smart in this respect. They have patches already available for some of the most popular CoCo programs. That means users can have the advantages offered by S.O.S. without having to write or modify programs on their own, Currently, Computerware's Editor and Macro Assembler, Micro Works' Editor/Assembler and Disassembler, Duggers Growing System's "C" Version 1.2. Elite Software's Elite*Word, Double Density's Clrterm Versions 3.3 and 4.1 and Cognitec's Telewriter-64 all have patch files available for them, Patches for Radio Shack's Disk Scripsit and Disk EDTASM are in the works.

If you own and regularly use one of these programs you really have no need to read ahead. S.O.S. offers you increased space using any of these programs and it is probably worth purchasing for that reason alone. If you have disk drives that are capable of using more than 35 tracks and/or stepping from track to track faster than 30 milliseconds, you will have these capabilities using S.O.S.

l only have access to *Telewriter-64*, therefore I only tried and tested one patch program. The installation was smooth and simple and left me with about 38,000 bytes of free space. That, in addition to being able to use the additional storage capacity of my 40-track double-sided drives, makes *S.O.S.* seem like a worthwhile investment. The *S.O.S.* patch changes very little of *Telewriter-64*'s operation. You can even use *Telepatch* from Spectrum Projects with the *S.O.S.* version. I can assume by the clear instructions that other patches would be just as simple to install and use.

Soistmann Enterprises includes three utility programs that are necessary no matter how you choose to use S.O.S. Format allows you to format new disks for use under S.O.S. and is necessary for formatting any type of disk that Disk

Extended BAStC cannot format, such as double-sided disks or 40- or 80-track disks. Backup allows backing up one disk to another one, which has been formatted the same way. Copy can copy files from one drive to another and includes two wild card characters. One can represent any single letter and the other can represent any group of letters. The use of wild card characters makes backing up one disk to a differently formatted disk a breeze. All three of these programs worked exactly as expected and as described in the user's manual.

Installation of S.O.S. can be somewhat tedious, but it shouldn't take more than a few tries to set things up the way you want them. Again, the manual is clearly written and explains everything in detail. The only problem is that there are many options. I had a hard time at first deciding on some of them. This really isn't a problem. The whole procedure doesn't take more than a few minutes, so if things don't work out exactly right the first time it is a simple matter to try again. The S.O.S. master disk is not copyprotected. In fact, the manual warns that the master should be used only to make backup copies and should never be altered.

Once installed, you enter S.O.S. by inserting your customized master in Drive 0 and typing RUN "SOS". This brings up the date entry request. S.O.S. dates all files and displays their date when it displays a directory. After entering the date, you are in the main command screen. From this screen you can enter any of the 20 available commands. Each of these is explained in detail in the user's manual. CL closes one or all open files. DC allows you to enter the current date. DD changes the default drive number. DI displays a directory of all files on a disk. The directory display doesn't scroll, so you can read it easily. The data is displayed next to each dated file. DL loads a contiguous block of data from disk to an address that you supply. This method is somewhat faster than loading a program. DM allows you to view and change memory locations. The display shows the address and the byte at that address as well as the four preceding and four following bytes. DS saves a contiguous block of data to disk. It is most useful in conjunction with DL. EX allows you to execute a machine language program at the address you supply. FG displays the number of free granules on the drive selected. FI allows you to change the number of files that can be open at one time. The maximum number of open files is 15. LO loads a machine language program from disk. OP opens a disk file for access as a direct, input or output file. PE prints a description of the current error. PP toggles the parallel print command on or off. When parallel print is on, all characters sent to the screen are also sent to the printer. RB exits S.O.S. and returns to BASIC. RE renames a file. RU loads and executes a machine language program from disk. SA saves a machine language program to disk. SA allows saving a program that is not contiguous. ZM places zeros in all user RAM. Many of the system calls duplicate or partially duplicate these commands. This allows you to try a series of commands before coding a program to execute

Since there are so many system calls, I couldn't possibly have tried and tested all of them. I did try a few in relatively simple programs just to get the feel of programming under S.O.S. The available calls tremendously reduce the amount of work a machine language programmer has to put in. Without S.O.S. even the simplest of programs requiring disk access are difficult to write. Using S.O.S. I was able

to put together working programs in a fraction of the time it would have taken under Disk Extended BAStC.

Soistmann Enterprises seems to have anticipated many needs. There is a system call to do nearly anything that is complicated or complex involving screen, printer or disk access. Some of the calls, although not necessary, are awfully handy, such as the ability to scroll a portion of the screen or to clear the keyboard roll-over table before getting a keypress. I won't even attempt to list the available calls; there are too many. If you are interested, Soistmann Enterprises offers a programmer's reference manual that lists and describes all of the system calls as well as all of the system variables. This volume is a necessity for those who plan to write programs to operate under S.O.S.

Overall, I am very impressed with S.O.S. for each of its uses. The program works, the authors support their work and are willing to address problems, the manuals are well-written, readable and informative, and the program patches are available for the right programs. I wholeheartedly recommend S.O.S. to anyone who can use one of the available patches. I also recommend it to anyone interested in writing machine language programs for their own use or modifying existing programs to operate under S.O.S. I'm not yet sure whether I can be quite so enthusiastic in recommending it to those who write commercially.

Soistmann Enterprises has put themselves in an odd position. If S.O.S. sells well and becomes widespread it will be an excellent system for which to write. It is certain to remain easier and faster to develop a program under S.O.S. than Disk Extended BAStC. But in order to sell in large volume, S.O.S. must offer purchasers a system that can run a wide variety of software. I hope the available patches start the ball rolling for S.O.S. because I believe it deserves to sell. If programs that run under S.O.S. are easier and faster to develop, we all may see more high quality, inexpensive programs available to us. This would benefit the entire CoCo Community.

(Soistmann Enterprises, Inc., P.O. Box 257, Budd Lake, NJ 07828 and P.O. Box 330, West Bertin, NJ 08091, disk \$49.95 plus \$3 S/H. Price includes user's manuat and one patch; additional patches \$9.95.)

One-Liner Contest Winner . . .

This program draws a comet on the PMODE4 screen. It takes a minute or so to complete, so be patient.

Some companies will tell you their programs are integrated.

Derringer

Software speaks

for itself.

Lots of companies claim that their programs are on the sci

Lots of companies claim that their programs are integrated. All they mean is that several programs are on the same disk. And only a few of them talk to each other. Crude systems that lack features can be a real headache.

At Derringer Software, when we say our programs are integrated, we mean that our programs *talk* to each other. Our PRO-COLOR-SERIES is completely compatible with DYNACALC® and TELEWRITER-64.™ These three programs are among the most flexible on the market today.

Investigate before you make any investment. Derringer Software will prove itself worthy. We produced the first serious database program for the Color Computer back in 1982. And it has remained the popular choice ever since. Now that's really saying something!

PRO-CDLOR-FILE

🖾 1984 by Derringer Sellware, Inc

ENHANCED 2.0

- 60 Data Fields to each record
- 1020 spaces available per record it needed
- Maximizes multiple drive operation
- 28 equation lines (+-*
- IF-THEN-ELSE logic test in equations

- IF-THEN ELSE togic test in equations
 Full Screen editing on up to 4 data entry screens
 Key click and auto key repeat
 Stores custom designed report formats
 Obtain totals, averages, or summaries for any field
 Output reports to printer, screen, or disk file
 Send data out to a DYNACALC compatible file
 Separate label generator for up to 10 across labels
 Pre-deline up to 16 indexes for searching/reporting
- Pre-define up to 16 indexes for searching/reporting life
- Sorts 750 records in under 5 minutes
- User defined selection menus
- Repeated tasks performed with one keystroke
- Comes with 75 pages of documentation in a 3 ring binder
- Supported by a national users group
- Full time programmer support
- Supplied on an unprotected disk

PRO-COLDR-FORMS 2.0

© 1984 by Dermoer Software, Inc.

PRO-CDLOR-FORMS will access data files created with PRO-COLOR-FILE and merge them with a letter or place them on pre-printed lorms.

STDRE UP TO 6 FORMATS - USER OFFINED PAGE SIZE
 SUPPORTS SPECIAL PRINTER CONTROL CODES - RIGHT
JUSTIFICATION - PASSWORD PROTECTION • MERCES
WITH GRAPHICS FROM MASTER DESIGN OR
TELEGRAPHICS •

PRO-COLOR-DIR

PRO-COLOR-OIR will read your directories and create a master data lile that can be accessed by PRO-COLOR-FILE for sorting and reporting. 1000 \pm records can be stored on one diskette with valuable information about each program.

You can obtain haid coples of the information and create labels of the filenames for placing on the diskette itself.

 DISK ID NAME • FILENAME/EXT • TYPE OF FILE DATE CREATED - DATE UPOATED - NUMBER DF GRANS ALLOCATED - NUMBER OF SECTORS ALLDCATED AND USED . MACHINE LANGUAGE ADDRESSES -

@ SUMMARY

If you use your spreadsheet program to keep track of your expenses then @SUMMARY can help you analyze those expenses. For example, if you indicate a "Category" for each expense then @SUMMARY will produce a report that shows a total for each category, the highest amount, the lowest amount and the average amount. In addition, @ SUMMARY can produce a hi-les line graph or bar graph of the analysis and allow you to place titles on the graph. A hardcopy of the graph can also be generated as well as saved to disk.

The analysis can be saved in a "data tile" which can be loaded into DYNACALC onead in by @SUMMARY for juture.

additions to the analysis. If you use other Spreadsheets such as ELITE*CALC then you have added a graphing feature to your spreadsheet applications. The analysis can also be saved in an ASCII file which can be read by word processors for

inclusion in a report. @SUMMARY is compatible with any spreadsheet program that can generate an ASCII text lile of worksheets.

Specify RS-DOS or OS9*

Introduction to Computer Math Sums it All Up

"I hate math, but this makes it seem easy." That is what a confirmed math hater said after looking at the first chapter of this textbook.

Introduction to Computer Math sounds like it should be chock full of Boolean algebra, network analysis and nice exciting algorithms, but it is actually a high school or non-technical college level text that teaches math and BASIC programming techniques.

As someone who briefly taught math at the college level and who has studied a great deal of math (up to tensor analysis, would you believe?), I have worked with many texts and *Introduction to Computer Math* is one of the few "easy" ones I have seen.

I've found that most people who hate math feel that way because of "hard" textbooks. "Hard" isn't a function of the complexity of the subject being taught, but rather the quality of the writing. I have seen new-math books given to third graders that I found confusing, yet in high school I found a text on quantum mechanics that made differential equations seem easy.

Introduction to Computer Math is one such "casy" book. This is a math book that uses computers to do a lot of the dirty work and at the same time shows students how computers are used to solve problems in the real world.

The author develops programming concepts in step with mathematics subjects, taking a student from compound

This prototype card leatures a 40 pin connector for projects requiring an online disk system or ROM paks. The CoCo signals are brought out to wirewrap pins. Special gold plated spring clips provide reliable and noisefree disk operation plus solid support for vertical mounting of the controller. The entire 4,3 ×7 finch card is drilled for ICs. Assembled, tested and ready to run.

XPNOR1 \$19.95 each or 2/\$36
Arugged 4,3×6.2 inch bare breadboard that brings the CoCo signals out to labeled pads Both XPNOR cards are double-sided glass/epoxy, have gold plated edge connectors, thru-hole plating and are designed with heavy power and ground buses. They're drilled for standard 0.3 end 0.6 inch wide dual In-line wirewrap sockets; with a 0.1 inch grid on the outboard end for connectors.

SuperGuide \$3.95 each

interest, flow charts, and sorting to number theory and geometry, along the way bringing in Jonathan Swift, the Super Bowl (probability) and Schiaparelli (the Martian Canals).

I don't think this book could be used by a student without regular access to a computer, but I do think a motivated student with this book and a computer could go far without a teacher.

This book fits in closely with a currently popular approach to "computer literacy," where educators are no longer aiming at teaching students to use computers, but are using computers as an aid in teaching much as books and films are used.

In summary, Introduction to Computer Math is a combination math-programming textbook that should lead any computer-oriented child (or adult) to an easy understanding of math concepts and make learning math much easier for the many others who haven't used computers before.

This book also provides a good introductory text for learning the BASIC language for implementation on any computer.

It was books like this, when I was lucky enough to get one between all those obtuse, boring books I normally had to use, that kept me going through the years of school.

Introduction to Computer Math also gives a clear introduction to one of the most misunderstood math subjects, probability theory, and in general presents all its topics in an interesting and humorous manner.

Pro Golf — A Swinger's Toy

After a month on "tonr" with *Pro Golf*, this reviewer is among the walking wounded! Both my pride and my trigger finger are slightly out of joint. I don't know how the program author knew in advance about my slice, but he sure had me thinking about taking up needlepoint!

The object of my frustration is the newly released *Pro Golf* game written by John Sandberg and released by Computerware. Please understand the frustration is directed at the way I played the game and not this program. The program can humble most any golfer with very realistic course layout and club action.

To play, the buyer needs to have at least 32K, Extended BASIC, one disk drive and one joystick. The game comes on two copy-protected disks and can be played by one, two, three or four at a time with each player able to declare if they play right- or left-handed.

The disk with the first 18 holes has the actual game on it and the second disk holds another 18-hole course plus a program that allows the user to view the individual holes on screen before playing them. Loading either program is handled by a simple RUN "GOLF" or "SEEHOLES" from the proper disk to get started,

John Sandberg has both courses laid out in a very realistic manner. Course one is 6,378 yards long, par 70, and the second course is 6,714 yards long, par 72. Lakes and rivers, sand traps, rough, heavy rough, trees and out-of-bounds areas all have their own color pattern, which, after a little time, seem very natural. Oh yes, there are fairways, but somehow I didn't use them much (just like the way I play a real course. That darn slice!). As in a real golf game, club selection, ball lie, aim, swing and wind affect the ball's travel. The player's skill in adjusting to conditions determines, for the most part, the outcome. For example, should the player hit the ball in among the trees, it cannot be blasted out or flown over the trees. The ball must be played around the trees. Likewise, hitting out of bounds requires a replay from same location and a two-stroke penalty. A water hazard requires a replay from the same location and a one-stroke penalty (while this may not be the way the official rules require, it is practical). But at least you don't lose a ball.

When the player has arrived within range to chip or lands on the green, the program automatically draws a full enlargement of the green and the surrounding area. At that point, the player off the green has his/her club selected by the program (pitching wedge), and once on the green, the putter is automatically selected.

Just before a hole is displayed, the player is reminded of the yardage and par for the hole. After completing a hole, the score card is displayed, the score is updated and the number of strokes over par is posted.

This program follows very closely the real world for play and scoring and even provides an opportunity to use the driving range or a putting green. The manual is complete and explains the ground rules. The only problems are the method required to swing the club and what appears to be some random decisions by the program on the results of that swing. To swing the club, the joystick is centered and moved to the rear (away from the firebutton), then it must be flicked, slapped or batted with a finger (or pencil, etc.) trying for speed not force (the reason my finger was slightly out of joint). The objective is to move the joystick from the back to front center as fast as possible.

The result of the flick determines, according to the manual, if the hit is a slice or a hook, short, or a short slice or short hook. However, on several attempts, the program would tell me it was "Nice Shot!", but the ball would turn out to be a slice (and maybe even go out of bounds). On the green during one round, the ball went into the hole (the program posted that fact) and then it noted it was "Out of Bounds! Try Again." I had to keep putting until I reached the 17 strokes maximum allowed for each hole. Granted, it only happened once, but with what appears to be the random decisions by the program, you can't win. Anyway, maybe I have time for just one more round before I take up needlepoint. Fore!

Double RAM Brings 512K to CoCo

The new ME-14T Double RAM is an expansion to the *Thunder RAM* board offered by Spectrum Projects. This upgrade expands CoCo to 512K of onboard RAM.

Double RAM consists of a 40-pin socket, a switch and eight 256K chips. Installation is simpler than the installation of *Thunder RAM*. Simply remove the 256K *Thunder RAM* chips already in your computer and plug in the new chip/socket combinations. After this, you will re-install the original 256K chips piggyback style. Also, you must remove the SAM chip and perform the same process on it. Finally, install the bank select switch and you are ready to go.

Use of Double RAM is fairly simple. When you wish to work in Bank 1, just set the switch to position one. You must flip the switch to enter Bank 2. This is an important point. Your CoCo will not have a contiguous 512K. Double RAM configures the computer to have two separate 256K banks, each accessing TDOS in the same way. It is as though you had installed two separate Thunder RAM boards as there is no logical connection between the two banks. Data cannot be transferred from one bank to the other.

At first, I considered the two separate banks to be a drawback to Double RAM. Who wants two unconnected halves of 512K? This approach, however, does allow some flexibility. Now it is possible to have 30 graphics pages in one bank and a Ramdisk in the other, or one could simply

choose to have two distinct Ramdisks. All functions and capabilities that apply to Thunder RAM apply to Double RAM as well.

The manually-switched bank approach does introduce a somewhat frustrating problem, however. Once Bank 1 is enabled, the other bank is effectively out of the system. The data it contains is still intact, but you have to throw the switch to enable it, thereby disabling Bank 1. The two banks cannot communicate with each other. It would have been nice to have a replacement ROM with the unit that would allow software control over which bank was being accessed.

The installation instructions in the documentation are clear, concise and easy to follow. The operation section, however, is somewhat misleading. It reads "...you can transfer a program from one bank to the other by loading it into the computer, switching banks, and then saving it to the second memory bank." This proved to be impossible. If you load a program into Bank 1 and switch banks, there is no way to access the program. It has been switched out of the system. The memory of the computer is the bank that has been switched out. The manufacturer has assured me that this statement has been removed from the documentation.

I was able to use the two 256K banks under both Disk BASIC and OS-9. Although theoretically possible, I was unable to run Disk BASIC in one bank while booting OS-9 in the other. I'm going to keep trying on that one.

Despite my frustration with the awkward design approach, I could see Double RAM's potential. Due to its requirement of *Thunder RAM* and, consequently, a 'D', 'E' or 'F' board CoCo, I don't feel it will become a standard for the CoCo. It does, however, have a place in the CoCo world. I don't know of too many Color Computer programs requiring more than 256K of memory, but in my book, Double RAM scores a 7½ on a 10 scale.

(Spectrum Projects, Inc., P.O. Box 21272, 93-15 86th Drive, Woodhaven, NY 11421, \$79.95 plus \$3 S/H)

The Enhancer 6.0 — Improved and Versatile

This latest Version 6.0 of *The Enhancer* is quite impressive. The biggest improvement from previous versions is the ability to save and recall redefined characters and keys. It requires 64K Extended BASIC and can be loaded from tape or disk, although the disk version contains several demonstration programs not available on the tape version. *The Enhancer* resides above Disk BASIC leaving everything else for BASIC. It also provides the capability to display text and graphics on a PMODE 4 screen in 32 columns by 24 rows. The text provides for true lowercase, but the descenders do not drop down below the base line. This is not objectionable to me but may be to some people. The Hi-Res screen text characters are well-formed and easy to read.

Once The Enhancer is loaded and executed it provides many new commands such as:

Recover — lets you recover a program erased with NEW.

Break — disable/enable the break key.

Scroll — lets you freeze a specified portion of the screen while the rest scrolls.

Custom — allows you to create your own custom graphics or text character.

Keydef — lets you define any of the alpha keys for any string or function. Default values are already set up in the program.

Despace — eliminates all spaces in your BASIC program except those enclosed in quotation marks.

Repeat — provides auto-key repeat after a ½ second delay.

Cursor — allows cursor positioning on the Hi-Res screen much like PRINT® in BASIC.

Swap — lets you swap either string or numeric variables.

Char — lets you determine the value of a character at a specified position on the Hi-Res screen.

All of the commands worked fine and were fun to experiment with. I was particularly impressed with the Custom and Scroll commands. The ability to create my own character set and save it for later recall was a treat, and the Scroll command let me lock any block of the 24 lines on the Hi-Res screen, thus keeping the frozen portion of my graphics intact.

Hint . . .

Cassette Motor Control

If you want to switch external devices on and off under computer control, the cassette remote control (the smaller gray plug on the cassette cable) is a good way to do it. It's best to use the CoCo's relay to key another relay whose contacts can handle the load you intend to switch.

In many cases (such as telephone pulse dialing) the MOTOR ON and OFF commands work too slowly. You can use POKE 65313, 4 to switch the motor on and POKE 65313, 52 to switch it off.

There are a couple of new functions added, too. However, their use is above my head. Using the documentation as a guide they are:

Eval — lets you evaluate the value of string\$ as compared to VAL in BASIC for actual

numbers.

Procedure — provides the ability to perform specified tasks.

Push and Pop — allows numeric values to be pushed and pulled from a stack.

Documentation is ample. The Enhancer comes with 20 pages covering everything you need to know to use the software. It's well-done and even contains information on using The Enhancer in machine language programs.

My only objection to *The Enhancer* is that it is copyprotected. While H.D.R. will replace your damaged disk or tape for only \$1, I don't believe that's much consolation if you have lost a favorite program, even temporarily. I'm a firm believer in backup copies and the thought of not having a backup of some of my favorite programs makes me nervous. If nothing else, I would like to see the package cost a little more and contain a tape backup.

I believe *The Enhancer 6.0* is worth the price. It lives up to its name and won't leave you disappointed.

(H.D.R. Software, 27 Doyle St., St. John's Newfoundland, Canada A1E 2N9, \$18)

FORMAKER Provides Clean Paperwork for Businesses

By Dennis A. Church

Many people establish small businesses, sometimes in their own homes, and those who have tried have undoubtedly discovered two things. You have to look good to the customer and it costs a lot to look good. This program helps in both areas by providing neat, well-prepared forms for a modest price.

As the name states, FORMAKER's primary purpose is to generate forms for the small business. These include invoices, mail orders, purchase orders, receipts, order confirmations, payment notes, overdue invoices and job quotes. It comes on a single disk with 15 pages of written instructions for a 32K CoCo and an 80-column printer. Although there are some quirks to loading, everything worked fine when I followed the instructions.

Accessing the program's features is a matter of choosing from a series of menus. In general, the input routines from the menus are goof-proof, although the BREAK key is not disabled. There are two main divisions to the program, each having four menus for making selections. The set-up procedure for printing any of these forms can be quite involved. The most efficient use for this program is when a number of forms need to be run or recorded or as a program to use a CoCo as a work station throughout the day.

E.T.T. Electronic Typing Teacher by CHERRYSoft

Learning to type the right way can save you hours of tedious work when entering programs into your CoCo, and this is just what ETT was designed to do. Devote a little time every day practicing with ETT and before you know it you will be typing with confidence. Entering those programs will no longer be the chore it use to be.

ETT's video keyboard lets you practice with all the keys labeled, all the keys blank or only the "home" keys labeled. The visual cues guide you while you learn to type without watching your fingers. ETT shows your accuracy, response time, and words per minute. You will quickly see that you are improving with practice.

With the sentences provided by ETT learning to type can be fun. Over 1000 variations chosen because they include every letter in the alphabet. You can also create your own practice sets. This outstanding program was written by a certified leacher and professional programmer and comes with a ten page student manual-study guide. Requires 16K Extended Basic.

Setting up FORMAKER requires first running the program PCLEARO in order to free up the memory from the graphics pages. Then the Customizer program must be run either directly or from the core program: F/BAS. The Customizer program stores the company name and address and special printer codes. It also stores a second set of names and codes that can be used, for instance, if you want to use the forms for personal orders or letters.

As I said, the core program is F/BAS. Entry of customer/ vendor information includes naming "to the attention of" and "from whom ordered." One aspect that may present a problem is that no provision is made for a four-line address. From F/BAS, select the type of form you want to print. Then the prompts ask for the quantity, description and cost of each item. A running total is on the screen throughout. At any time during item entry you may save the list to disk, see the subtotal, cancel the last item for re-entry, return to the menu and even insert items that have been previously stored in a subquote disk file. The option to cancel the last entry, however, is not presented onsereen. I discovered it in the documentation. It worked as advertised. When item entry is completed, a series of questions asks for tax rate, discounts, type of payment or account, shipping method, shipping cost and deposit as well as the customer tax number. When an item does not apply, pressing ENTER bypasses it for the printout,

FORMAKER uses either one or two disk drives. With two drives, the data disk is kept in Drive 0, which is unusual. Getting started with the program in Drive 1 requires attention to disk loading syntax, but once startup is accomplished, the program handles the two drives well.

The printer menu is extensive. When setting up the program with the customizer, you need to include the printer codes for form feed, emphasized print and regular print since these options are available on the print menu. In practice, other things can happen by using other codes. I preferred choosing between condensed and regular print and 1 accomplished that by using the printer codes for condensed print when asked for emphasized codes.

Before choosing the "print single copy" option, menu items can adjust the printoul to print multiple copies, to omit the return address (if you are using a letterhead), to arrange the printout for either window envelope or no envelope and to print the envelope address for the form.

Hint . . .

DMP-105 Ribbons

The cartridge ribbon for the Tandy DMP-105 printer is apparently only available from Radio Shack. Ribbon life is rated at one-million characters, but this can easily be extended two- or three-fold.

Gently pry off the top cover of the cartridge and invert the large foam ink wheel. The constant reinking process can be further enhanced by putting a few drops of matrix printer ink on the foam.

Melvin L. Mauck Lexington, VA You can also print subquotes (a disk-stored item list) on separate sheets of paper, which causes a pause until you advance or change paper in the printer. There is no option accessible within the program, however, to change the Baud rate, which is 600.

All these options work fine to produce forms that are 70 characters across. There are no fancy graphics or logos, but the forms are well-organized and clear and contain the information you have included without items that don't pertain. For example, if you do not indicate a customer tax number, there will be no line referring to it.

Another type of form the program generates is the standard business letter. Text is entered by selecting a "notes" or "letter" option. This program module allows the entry of up to 40 lines of 70 characters each. It is essentially a limited line-oriented text processor. Lines can be reviewed, but you must re-enter an entire line to change anything within the line. These notes may be saved to disk for retrieval any time or used immediately for printing. Lines from this module may also be attached to any form available, which makes it easy for invoices, mail orders, etc., to carry specific messages from your business such as "avoid broken bones, pay your bills promptly."

A strategy for entering the lines when writing a letter is to make each line as close to the same length as possible because each is printed as an entire line, blank lines and

spaces included,

FORMAKER comes with 15 pages of documentation. It is well-organized and clear, especially on the use of the Customizer program, which is the first step to effective use of FORMAKER. There are an additional 15 pages of documentation in a disk file named FHELP. This information is available at any menu page as on-screen help. Press "?" at any menu item; that item is then explained. As convenient as this sounds, I recommend that you first run PHELP, a program that prints out the pages to the printer. Selecting on-screen help causes the disk drive to churn quite a long time. When the text-help comes to the screen, it is obvious that the formatting was done to accommodate the printout. Lowercase letters create a checkerboard and words are broken at line's end indiscriminately.

This is not to say that I find fault with this documentation. The printout is well-organized by topics with numbered pages. It complements the written documentation by providing a reference for the features and functions of the

program.

As mentioned before, I don't think this is a program you boot up if you just want to order a 64K RAM button from Spectrum Projects. The loading procedure is rather involved. If you are going to bill a dozen customers with personal notes attached, however, I can't think of a better program. It is especially useful if you need to prepare a variety of forms at the same time. Switching from mail order to overdue invoice, for instance, is just two menu choices away. This program would make a CoCo and printer an ideal work station to be used like a cash register most of the time and to send bills, etc., at the close of the day. It will give the small or home business professional-looking forms and effortless, errorless totals, accounting for taxes, discounts, shipping and deposits.

(Challenger Software, 42 4th Street, Pennsburg, PA 18073, 32K ECB, disk \$49)

Software Review

Tracking Radio Contacts is Easy with Radiolog

Radiolog is a handy program for the amateur radio operator. It can be used to keep track of stations worked by either date or call sign. Provision is made after each entry to add up to 23 extra characters as remarks. This is useful to log contest exchanges, signal strength, frequency, etc.

This electronic logbook is supplied on a single diskette under three filenames: Log/Bas, used for a single drive system; Radiolog/5, used with a two-drive system (reads Drive 0 and 1 and writes to Drive 1 only) to be used when the disk in Drive 0 is full; and Conv/Bas, which converts the Radiolog program to read all the data on Drive 0 and Drive 1, then begins entering data on Drive 1.

With a single drive system you can store about 2,500 QSOs (two-way contacts) while 5,500 are possible with a two-drive system, which is ample contact storage for even

the most active operator.

The program is menu driven and very easy to use. It's also very fast in its search mode judging from the 50 or so test entries I made. The main menu provides the routine to

enter, edit, and list your logbook information.

A SEARCH/EDIT function will find any call sign you have entered with the opportunity to continue searching for the same station or to look for another. This is a very important feature for contest operators who must search for and delete duplicate contacts. Editing is just as simple by pressing 'E' and re-entering corrected information if the need arises.

The nicest feature by far, in my opinion, is the printer capability. You can print out your logbook entries by date or call sign. I used it with my Gemini-10X and got very nice looking pages suitable for storage in a three-ring binder.

The package consists of a single diskette that can be backed up for your own use and four pages of printed instructions. Also included is a "code plug." This is a modified plug that fits into the right joystick socket and must be in place for proper program operation.

So, Hams, take heart! Here is an inexpensive way for your computer to help out in the shack. Now you can clear the operating position of all those dog-eared logsheets and let CoCo keep track of your contacts.

(Sunrise Software, 8901 NW 26 St., Sunrise FL 33322, \$9.95)

26 Hardware Projects Offers Challenges for the Advanced

Are you a serious electronics hobbyist? Do you like to construct small electronic circuits? Do you wonder how you can interface your computer with the outside world? If your answer is "yes" to these questions, do I have a review for you!

26 Hardware Projects for the Home Computer is a book of electronic circuits dealing with devices you can build to interface with your computer. The introduction states, ". . . it is assumed that the reader knows the rudiments of soldering, the handling of CMOS chips, and the use of an oscilloscope." After looking at some of the circuits in this book, I suggest that the user know what he is doing since some of these circuits are very complicated.

With that warning out of the way, let's get started, There are 26 projects in this book and they are broken down into three categories: 1) Input/output devices, 2) Output devices and 3) Input devices. Input devices allow information or data to be entered into your computer from external devices such as a keyboard, cassette or disk drive. Output devices allow information or data to be sent from the computer to an external device such as a monitor or a printer. Input/ Output devices combine both of the preceeding operations.

Let's examine some of the individual projects included in each of the categories listed.

Input/Output Devices — Peripheral Interface Adapter (PIA). The PIA exchanges data with a peripheral under the direction of the central processing unit. A peripheral is a unit of processing equipment that is outside of the computer, such as a keyboard, monitor, cassette player or disk drive. Now we'll see how this process works,

The PIA has eight data pins that are used for exchanging information with the central processing unit. It also has 16 peripheral data pins that are used for sending or receiving data to and from peripherals. Each peripheral data pin can be used as an input or an output, but not both at the same time.

Let's say you type a math problem on the keyboard. This information is sent to the central processing unit via the PIA. The CPU then acts on this information (figuring out the problem) and generates the answer again through the PIA to an output device such as the monitor where you see the results of the problem printed on the screen.

In our example above, the keyboard is connected as an input, through the appropriate interface circuitry, to the peripheral data pins. The monitor is connected as an output, again through the appropriate interface circuitry, to the other peripheral data pins. With these two devices connected in this way to the PIA, you are able to type something onto the keyboard and to see what is typed on the monitor.

Output Devices - 7475 Data Latch. As the name suggests, this project is used to latch onto the data as it comes from the data bus. This is necessary because the information on the data bus is only on the bus for a couple hundred nanoseconds. With this project, the latch output stays constant until more data is entered.

The timing of the data strobe is very important because it controls when the data disappears from the input. Each of these chips can handle four bits at a time, so you need to use two chips for an eight-bit data bus.

Input Devices — I chose the Electronic Sketcher as the last project I will talk about. This is a very simple circuit that requires the use of three resistors, a +2.5 voltage and the use of one of the joystick inputs to connect it to your CoCo,

This circuit works by putting dots on the computer screen with the use of two 10K pots, which control the location that the dots are seen on the screen. These pots can be labeled the 'X' and 'Y' inputs. The screen is broken down into rows (X axis) and columns (Y axis).

You use the joystick as the input from this circuit since this is an analog-to-digital converter. When you turn the 10K pots, it is considered an analog (continuous) movement. This analog movement must be converted into a voltage the computer understands, which is digital. The Ato-D converter does this automatically.

You can also hook up a switch to another of the joystick inputs and this allows you to add or erase dots. Thus, you can easily erase your creations,

As mentioned earlier, some of these projects are definitely not for the novice hobbyist. That is why I only presented a thumbnail sketch of how the projects worked,

If you are an experienced hobbyist and would like to have some projects that allow you to interface your CoCo with the outside world, you will find this an interesting book.

(Dan Cross-Cole, 208 N. Abingdon St., Arlington, VA 22201, \$5.95)

John H. Appel

Word Processor Disparity Solved with CoCo Text Util

Have you ever downloaded text from your favorite BBS or copied a text file created on a word processor different from the one you use? Have you ever had to edit the text and insert or delete carriage returns to make it look like it's supposed to?

If the answer to either of these questions is yes, then CoCo Text Util will solve the problem. This BASIC program from Foxx Software is designed for people who use their CoCo with a word processor to create text files to upload to or download from another system or BBS.

CoCo Text Util reads any ASCII file from disk, modifies it according to user-specified menu options and creates a new file leaving the original file intact. The menu options

- 1) Insert carriage returns
- 2) Strip carriage returns
- 3) Strip control characters
- 4) Convert to all mixed-case
- Convert to all uppercase
- 6) Convert to all lowercase
- 7) Fix WordStar files
- C) Count file
- P) Print file
- R) Rename file
- K) Kill file
- D) Display file
- Q) Quit
- B) Baud rate

Each of these menu options is self-explanatory but a few deserve further explanation.

VIP Writer and some other word processors do not add a carriage return at the end of a line and problems are likely to occur when trying to upload to a BBS or read the file on another word processor. Since each paragraph is saved as one continuous line, you get a rather cluttered text file on any other word processor. If option one is chosen, the program adds carriage returns at the line length specified and word wrap is enabled. The exact opposite occurs when selecting option two to remove carriage returns. This is needed if using VIP Writer to read a text file created with a word processor such as Telewriter-64. Control characters can be removed from the file by choosing option three. For example, if Telewriter-64 files with control codes that are unreadable to VIP Writer, it may prevent the file from loading at all.

SEND S.A.S.E. HOW

The commands to convert to upper-, lower- and mixedcase are handy if your printer won't handle lowercase, or if the BBS needs one or the other. The Count File option does just that. It counts and displays the length of the file you are working with. The Print File function prints hard copy of the file at selectable Baud rates up to 2400, I could not check the option that fixes WordStar files. However, the author's explanation stated that it corrects these files so they can be used with other popular word processors.

A nice feature is the default extension automatically added by the program. This is a quick and accurate way to determine which files have been corrected when viewing the disk directory. As an example, FILENAME.ICR indicates a file with carriage returns inserted, while FILENAME, AUC indicates all uppercase. The extensions may be modified to your preference as well.

The program is available for disk operation only. It is not copy-protected, so backup copies can be made. A liberal return policy is available from the author, Dave Haber, who will replace the program free of charge if problems develop. The documentation consists of a six-page, spiral-bound booklet that is easy to understand.

I think CoCo Text Util will be a hit because it fills a need. It takes a lot of drudgery out of text file editing. The price is right and the return policy can't be beat.

(Spectrum Projects, Inc., P.O. Box 21272, 93-15 86th Drive, Woodhaven, NY 11421, \$19.95 plus \$3 S/H)

- Jerry Semones

Library Service Disk Management System Worth Checking Out

The Disk Management System program, supplied on an improtected disk, needs 32K memory for all of the options to work, but most of its options work with a 16K system. And work it does!

The program provides a library service for the disk user by storing a copy of the user's disk directories and allocation tables of each of up to 100 disks on a DMS disk. The DMS disk is actually created by the program to function as repository for the eight functional utilities and the disk information. These eight utilities are the heart of the program, but the disk also includes two bonus routines.

The program disk holds a program that creates the disk management system (DMS) disk. The original program disk is used only to create the DMS disk, which then becomes the operating disk. The start-up routine is the most work the user really has to do to in using the program. This routine is set to function on a single disk drive and requires several disk swaps to transfer the necessary programs to the DMS disk.

The DMS disk functions are called into action by selecting the option desired from a colorful main menu. Selecting the first letter of the option is all that is needed to bring up the submenu for that option. However, the first time the program is run, the user is given the opportunity to configure the program to work with in the parameters of his/her system. The number of drives may be changed from the default of one to two, printer Baud rate may be set for the other than default 600, adjustments can be made for whether or not you have an Epson Printer online and whether or not the system operates at "double speed," The question on the Epson printer relates to "skip perforation" subroutine written for the Epson for printouts, The double speed option works with some units and the program author includes a four-line test program in the manual for those users not surc if it is possible on their unit. The double speed option only affects the sort routine and is not a problem to users if their systems do not work at double speed. As noted, this start-up routine need only be done the first time the DMS program is run. After that the user is locked into those specifications.

The major options are: Update Files, Search, Complete Directory Listing, Disk Information, Names of Disks on File, Alphabetize and Print, Restore and Basic.

The Update File option is used to obtain the information to be stored in the library on the DMS disk. As part of this operation, the user is required to provide a name for the disk being read into the library. A name may be up to 32 characters long. The programs or liles on the disk are logged in under the disk name and each disk read is given a sequential number. The name and number are used in other options.

The Search option searches through all the data in the library to find the specific name entered. How specifically the search name is entered determines the number of responses. For example, if only DISK is entered, programs that have DISK in them will be found; DISK.DAT, DISKFLE

.BAS and EDDISK.BIN for example. The results of the search can be directed to the screen or printer.

The Complete Directory Listing option produces a printout (either to screen or printer) of all the items in the library.

The Disk Information option gives the user a listing of not only the disk's directory but also of the disk's allocation table. To get this information, the disk is called up by its number. To get the information on the disk and its assigned number, the Names of Disks on File option is used. Again, the listing can be to screen or printer.

The Alphabetize and Print option is available only to users with 32K of memory. If the unit in use can run at double speed, the sort and alphabetize times are reduced. However, the routine is fast enough without double speed. For example, a sample of eight disks with 104 programs took only 12 seconds to sort. After the sort is completed, the names of files are printed out in four columns listing each filename and extension plus the number of the disk it is found on. The names are printed in blocks according to the letter of the alphabet with a blank line between the blocks. The program allows 1,300 names to be sorted.

The Restore option is usable to restore a crashed disk. The saved disk directory and allocation table can be rewritten to a disk that needs such resuscitation. This option is not a stand-alone zap routine, but was designed to work with a disk-zap program. As part of the testing, a disk allocation table (of a saved disk) was altered and then restored with this option.

The Basic option is used to return to BASIC and end the program. As an added feature, this routine closes files and sets the disk drive head to track zero before doing a warm restart

One of the bonus programs is a Name program that allows the user to place names on disks without going through the DMS routine to do so. However, if the disk has already been logged into the DMS library under a different name, it will still be in the file as entered. The other bonus is a Menu program. (See Page 214 of the February 1986 issue of RAINBOW for complete description of this program.)

The manual is six single-sided standard pages printed by a dot-matrix printer. All the information necessary to use the program is included and is easy to follow.

Transferring ASCII Programs

By Dan Downard Rainbow Technical Editor

 I have recently upgraded to 64K and disk, I also have a Model III with two disk drives and a DWP-410 printer.

I would like to be able to transfer ASCII programs and data from CoCo to Model III and from Model III to CoCo. Any information on doing this would be appreciated.

Robert L. Burnham Huntington Beach, CA

Robert, MichTron used to market C III, a program that directly transfers ASCII disk files from a CoCo to a Model III, or viceversa, Write them for more information, I have used the program and it works fine.

Printer Problems?

• I have a Gemini-10X printer, At first it worked perfectly with all the printer programs I typed in from THE RAINBOW. But now something has happened — whenever I try to print out anything using the PRINTH-2 or LLIST commands all I get is garbage. The printer still works perfectly with Color Scripsit but not with anything else. I reset the DIP switches, but that didn't work. I also took my printer over to my friend's house and tried it on his CoCo I: it still didn't work. I was wondering if you

Dan Downard is an electrical engineer and has been involved in electronics for 26 years through ham radio (K4KWT). His interest in computers began about seven years ago and he has built several 68XX systems.

could give me some possible suggestions on what might be the problem, and also what the possible correction(s) might be,

Corey Davis Winnipeg, Manitoba

Corey, see the next letter.

• I am writing in response to the question asked by John E. Walsh about the Gemini SG-10 printer ["Downloads," December 1985, Page 256]. Graphicom may be responsive to the Epson printers but it will not work properly with the Gemini series and Hardcopy by Computize will not work at all, I use a Gemini-10X printer and have found that the best for printing graphics and type on graphics pages is CoCo Max.

Computize advertised that Hardcopy was compatible with all the Gemini series printers, however, it does not work.

Jack W. Eizenga Baldwin Park, CA

Jack, I'll stand behind Hardcopy 100 percent, A friend of mine has a Gemini-10X like yours and uses this screen dump program extensively.

After some conversations with Computize we believe there is a problem with some serial-to-parallel converters. Since these converters have to contain an oscillator for the serial output timing, you may be experiencing drift in the oscillator. Some use a simple RC circuit with a fixed resistor, and some have a potentiometer. It's easy to adjust a pot, but difficult with a fixed resistor.

As soon as we find a solution we'll print it, but this brings up a good point. You didn't say what kind of scrial-to-parallel interface you are using, It really helps me to know every detail of your system. Lately, I haven't seen too many unmodified CoCos left. Every modification you make may have an effect on something else in your system. I know this doesn't exactly solve your problem, but Computize has had enough complaints that they are making an honest effort to remedy the situation. We're trying to help.

Video Signal Fine with PAL TV

• You have written that there can be difficulty using a CoCo in Europe only in video signal.

I have my American CoCo, DMP-105 printer and two disk drives, all bought in the USA on 110, running in Israel with a 220-110 volt AC convertor (300 watt) and a PAL TV. The video output on my standard CoCo works fine with a PAL TV. There are a few problems though. First, using the CoCo on chantel 3, you must adjust the horizontal and verticle hold. Without this you have an unusable picture. Also, there is no sound. To remedy the sound problem, I've installed Moreton Bay's Mini Month.

Jay Y. Krinsky Netanya, Israel

It's nice to hear from our readers in Israel, Jay, especially when they have an experience to contribute such as yours.

Early Telewriter-64 Updated

• The early Telewriter-64 was written for Color BASIC I.I, If you try to use it with the

tiewer Color BASIC version 1.2 it seems to work, although unreliably and with very slow key response. I've noticed the Color BASIC 1.2 has a different address for POL-CAT. Here are the fixes and procedures. These apply only to the first issue tapy of Telewriter-64, and without disk controller:

1) Cold start

2) POKE 25,78:PDKE 19968,0:NEW

3) PMODE4, 1: PCLS

4) PMODE4,5: PCLS

5) PMODE4,9:PCLS

6) CLOADM"TW64"

7) POKE 7932,203

8) PDKE 8208, 203

9) POKE 9729,203

(0) POKE 13658,203

II) POKE 14648,203

12) POKE 15116,203

13) CSAVEM"TW64", 2720,

16360,7720

Copy this version onto your working Telewriter tape in place of the original version and you will find the Color BASIC 1.2 performs better than the 1.1 and original Telewriter-64 ever did in terms of speed.

Here are the fixes and procedures for conversion from Color BASIC 1.1 to 1.2 for the original Telewriter-64 disk. Please note this doesn't fix the Disk BASIC 1.0 to 1.1.

- 1) Cold start
- 2) POKE 25,86: POKE 22016,0: NEW
- 3) PMDOE4,1: PCLS
- 4) PMODE4,5:PCLS
- 5) PMDDE4, 9: PCLS
- 6) LDADM"TN64"
- 7) PDKE 2932,203
- 8) PDKE B211, 203
- 9) POKE 9846,203 10) POKE 13784,203
- II) POKE 14775,203
- 12) POKE 15242,203
- 13) SAVEM"TW64/BIN", 7720,16619,7720

Put this on your working copy disk of Telewriter-64 in place of the original Telewriter-64.

> Don Pilil Guilford, CT

I guess Telewriter is probably the most widely used piece of software for the CoCo, Don, and I'm sure your tips will be welcome. I still use Telewriter 64 to write this column,

Typewriter Interfacing

I am trying to interface my Brother EP44 typywriter/printer to my CoCo, but can't seem to get it in work. I've connerted the TD line of the CoCo to the RD line of the typewriter, and I've connected the CD line of the CoCo to the typewriter, etc., but I can't get it to operate properly. The typewriter takes a normal DB25 RS-232 comjectur. The pin locations are listed below,

Signal name	Code
Send Data	SD
Receive Data	RD
Request to send	RS
Clear to send	CS
Data Set Ready	DR
Signal gnd	SG
Carrier Detect	CD
External Ready	ER
	Receive Data Request to send Clear to send Data Set Ready Signal gnd

These are listed exactly as in the manual. Mike Sileo, Jr. Glendale, NY

The configuration you refer to is the most common I have seen for a printer.

The key to success lies in the fact that one of the pins on the printer must signal the CoCo that the buffer is full, or the printer is busy, and not to send any more characters until this condition is cleared.

Install two jumpers on the DB25 connector at the printer, one between pins 4 and 5, and one between pins 6 and 8. Then, make the following connections:

CaCo	Printer		
Pin 4	to Pin 3		
Pin 3	to Pin 7		
Pin 2	to Pin 20		

See if that doesn't work, Mike.

Power Strip Shortcut Damaging?

 Thave my CoCo, monitor, disk drives and printer all plugged into a nower strip. I normally keep the printer turned off unless Laninshing it. The rest is all left on ainl turned on and off with the switch on the power strip. Some people have said that I could be causing damage to the equipment by doing this. On the other hand, other people say there is nothing wrong with this method. Now for the final word . . . what do you say? Tom Wadsworth York, PA

Tom, the only reason you have heard some rumors to this effect is that computers are susceptible to power line spikes caused by motor starting, appliances, etc. For this reason, conservative practice calls for turning on the computer last after all other accessories, such as printers or disk drives. Using the same premise, the computer should be turned off first, before all of the accessories. I wouldn't worry too much about turning everything on and off with a power strip, since most of the modern strips have transient suppressors built in anyway.

The Slow Scrolling Poke Blues

 Let me first start off by complimenting you on the fine job you are doing with "Dounloads." Many of my questions about the CoCo 2 have been answered ugain and again by information vantained in your roluum.

My question is roncerning the show scrolling PDKE (PDKE 359,60). This is one of the most useful POKEs I know of for this machine. However, when I was finally able to purchase my first disk drive and connected it to the machine (I own a 64K CaCo 2), everything seemed to work as athertised except for one small problem. When I try to list a program using the slow scrolling PDKE, the machim locks up and nothing can be done, save that of turning off the machine and powering back up after a few revonds. I also have a few programs that utilize thir fine little POKE.

Do you know of an alternate PDKE to be used while the disk system is hooked up? Or is this, in fact, a problem with the machine that should not exist? When the disk controller is removed, the system works as it should and this PDKE works just fine. So far, this is the only problem I have encounterral in the transistion to the real world of the fantastic disk drive.

> William P. Flinn Spring Valley, CA

Bill, I think one of the most useful short utilities ever published in the RAINBOW was *loglist* by K. Deahl. By using this utility you can LIST programs at any speed you wish. Here it is for you new subscribers.

******************************** 301 '****K. DEAHL-9/06/82* 305 , ************* 303 FOR X=1000 TD 1015 304 READ A: PDKE X, A: NEXT X 305 POKE360, 3: POKE361, 232 306 DATA52,86,189,169,222 307 DATA190,1,91,48,1,189 308 DATA167,211,53,86,57 309 END: 'orNEWif you like

It works with disk systems, too. Don't try to SAVE anything, though, after you run this utility. You'll get strange results,

Your technical questions are welcomed. Please address them to: Downloads, THE RAINBOW, P.O. Box 385, Prospect, KY 40059. We reserve the right to publish only questions of general interest and to edit for space and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Your technical questions may also be sent to us through the MAIL section of our new Delphi CoCo SIG. From the CoCo SIG> prompt, pick DELPHI MAIL, then type SEND and address TO: DANDOWNARD.

The Intelligent Choice...

8995 (119.95 CDN)

DMIT IT! Your computer always had the power, but never the software. Now...Four Star Software presents a product unlike any other. Penpal! This is a package intelligent enough to help you reach new heights of personal productivity. Designed to be learned in less than a day, the entire program is quick and easy, powerful but elegant. A pleasure to use!

Penpal provides you with a package that combines the five most wanted computer applications into one incredibly easy-to-use integrated environment. This sets a new standard of excellence in applications software: What would you pay for a program that does it all, but does it easily?

We invite you to compare PENPAL'S list of outstanding features with any other software currently on the market for any computer! Packages like this cost hundreds more on other machines. PENPAL brings the power of a PC to your CoCo at an Unbelievable and Unbeatable price! We guarantee it...if you are not completely satisfied, return it within 30 days for a prompt refund.

For a limited time, take advantage of our low introductory price. You won't be disappointed you did!

Order your personal copy of PENPAL today to finally realize the full potential of your Color Computer. Available directly from Four Star Software or enquire at your local Computer dealer.

- Twelve function Keys and a continuously displayed reminder line make this program easy to use. No complicated key combinations or commands to remember!
- On-line help function
- Hi-res 51 x 24 display sereen
- Common formats and commands in all five modules make this package easy to learn and user friendly.
- Fast and effective 255 by 255 spreadsheet is very versatile.
 Flexible text editor includes all common features found on others plus centering, justification, and pagination. Efficient database includes advanced indexed sorting capability and much, much more!
- Create full color, presentation quality graphs with variable size labels directly from your spreadsheet in pie, line, dot or bar formats using the Graph-it function. Incredible!
- Upload and download files, access networks, or communicate with other users with built in Telecom feature. This is not just a simple dumb terminal package!
- Modules interface with each other to form a truly integrated package unlike any you have ever experienced. These are not just seperate programs that are selectable from central menulike others offer!
- Comes in an attractive binder set, with reference manuals.
 Requires 64K and minimum of one disk drive.

ACCESSIBLE APPLICATIONS

DeskMate's Attributes Define Good Integrated Software

By Richard A. White Rainbow Contributing Editor

Te interrupt our discussion of BASIC09 to consider Desk-Mate for the CoCo, which has recently been released by Radio Shack. In keeping with the "Accessible Applications" theme, this applications package is truly accessible and meets a real need for simple, user-friendly software for personal use.

My brother-in-law, Art, bought a CoCo a number of years ago along with a disk drive and DMP-200, but had done very little with it. Neither had his two girls and wife, or so we thought. So Art asked what he might be able to sell the system for. I asked why it was not used. Seems his wife and older daughter felt an electric typewriter would be more useful since they had not been able to make the VIP Writer work. I understood. VIP might qualify as user hostile compared to other offerings.

We then had a little demonstration, I showed them *DynaStar* and how easy it was to get up and running. But, that wasn't for them either. Turning the computer into a typewriter was easier to

Richard White lives in Fairfield, Ohio, and has a long background with microcomputers and specializes in BASIC programming, With Don Dollberg, he is the co-author of the TIMS database management program.

handle. I wrote a short BASIC program that did just that. Julie, the 16-year-old, watched closely, following what I was doing with obvious understanding of the process. She mentioned that she had worked through the Color BASIC book last summer. Mom hadn't realized what she was doing nor what she had learned till now and was impressed. They took the program home on disk and quickly had it up and running. It worked well enough to show that something a bit more powerful was needed.

I had recommended they purchase Desk Mate, particularly with the half price sale of CoCo software then going on. I decided to buy a copy myself to see what it would do; I am impressed. Desk Maie comes on a nearly full 35track disk. It is an OS-9-based package, but you don't need to buy OS-9 since a minimum version of OS-9, Version 2, is on the disk. Obviously, a 64K CoCo is required. If you want to use the telecommunications program, Telcom, you also need a multipack interface and the RS-232 Pak. However, all other parts of the package can be used without these pieces. And, I am assuming you have a printer — a computer without a printer is like a three-legged horse.

Type DDS and the system boots directly into a PMODE3, multicolor graphics menn asking you to enter the date and time. Then comes the main menu with the six applications available in Folder 3, shown as icons with names beneath.

The folders refer to directories the user can select by using the '@' and right-arrow keys to move to the folder area. Type @-* and a new set of icons appear at the top of the screen after some disk action. Upon selecting the folder icon, I came to discover that folders 1 and 2 pointed to directory / D0, while 3 and 4 pointed to / D0/CMDS. These assignments are changeable.

Choose the printer and you get a spiffy diagram with a dimensioned page showing current margins, line length and lines per page. Pressing the ENTER key moves the cursor to each setting in turn, inviting the user to make any changes one at a time, Similarly, you can change the time and date, and change the screen display colors (dark on light or light on dark). Choose the mouse and choose if you want to use a joystick or mouse along with the keyboard. All choices are recorded in a "config" file and are active each time you run the program. These choices can also be checked and changed from any Desk Mate application.

Next to the printer icon is a calculator. Choose it and a calculator appears

May 1986

on the screen. Type in numbers and operators as you would in any calculator to make it work. It even has a memory you can add to, subtract from, recall or clear. Leave calculator and it returns to the application from which you came.

There are six applications in Folder 3: Calendar, Index Cards, Ledger, Paint, Telcom and Text Editor. All except Paint are similar to the Tandy 1000 counterparts. Telcom requires use of the RS-232 ROM pak. Paint is a four-color picture editor. Each application has a menu bar at the top with a limited choice of pull-down menus. "Files" is always a choice with submenu choices, which always include CLOSE. CLOSE is used to close all active files and leave the application.

Sensitive as I am to spreadsheets, I gave Ledger a first look. I expected no more than a minimum spreadsheet and that is what it is but with a few nice touches. One can set column widths individually. Less exciting is the column width automatically expanding to accommodate wider labels. I don't think I want my carefully designed columns changing automatically. Still, someone is trying for a new idea for a change. In the speed department, Ledger is no Dyna Cale, but it seems to be faster than the Tandy 1000 Desk Mate spreadsheet on recalculation.

Ledger is limited to 100 columns and 100 rows. There is only enough memory to use part of this grid. But, this is typical of all spreadsheets in memory-limited machines. If you need to do big spreadsheets, buy DynaCale. If this won't do it, you will have to spend big bucks for an MS-DOS machine and Lotus 1-2-3 or another spreadsheet.

I was very glad to find that one can save all or part of the spreadsheet as a document file. This means a spreadsheet can be worked up and its display transferred to the *Text Editor* to include in a report or letter. A document file cannot be read into *Ledger*, so be sure to make a normal save of your spreadsheet as well.

Portions of the spreadsheet can be selected for printing. This allows you to print sheets that have more columns than the printer can print onto a page. More capable spreadsheets can do this automatically, while it must be done manually with *Ledger*. The important thing is that it can be done. I don't want to lose sight of the fact that *Desk Mate* applications are intended to perform hasic functions and not have all the bells and whistles in the world. In fact, if they

had put much more into DeskMate, it would not have fit onto one disk.

Ledger uses commands that are common to most of the other applications in the package. This common command structure is one of the advantages one should get in an integrated applications package. It makes it much easier to learn the applications if one needs to learn how to Select and Copy only once. We will come back to Ledger later and give some applications.

The most-used computer application is the text editor or word processor. A word processor is a more powerful text editor. (Don't ask me to draw the line between the two.) Desk Mate's Text Editor is aptly named since there is a lot it does not do. However, it does get words into a file, edits them fairly easily and lets you print them with specified margins, line lengths, lines per page, etc. I did my monthly column for our user group newsletter with the Text Editor, then sent it by modem to the editor

"Choose the printer and you get a spiffy diagram with a dimensioned page showing current margins, line length and lines per page."

using *Telcom*. This was as easy as using my normal *DynaStar* and sending the file with a different telecommunications package.

A word about the display. It is 32 characters by 22 lines, which is all that can be reasonably expected for PMDDE3 graphics. It is always in graphics, so it does display true lowercase. It should work even on a crummy color TV, which has to be the design objective, and its reasonably fast.

The Calendar program is fun, but has a future problem. You can use "find date," type in the target date as, say, 4/15/86, and it displays the April calendar and any notes for that date. Type in 1/1/00 and you get January 1, 1900, rather than January 1, 2000. If you are a worry wart, you can get a fabulous 15-year worry from this. Even worse, zeros sort before any other numeral. There are vast quantities of computer files that carry their date stamp in the form of MM/DD/YY, or some similar way

with a two-digit year code. Starting on January 1, 2000, most current date sorting routines quit working properly. Whole countries could grind to a halt!

But, I digress. I did do some closer term checks, like proper handling of February in leap years and checked a couple of 1987 months against my pocket calendar. It will work for the next 14 years, which is eons in the computer world.

Notes and appointments for various days are entered in the future as far out as you have information. You have available all the editing tools that are in the Text Editor and they work exactly the same way. The file can be searched using the "7 find" command for any or all occurrences of specific text, such as "computer group meeting." Note that I wrote "7 find." This is the way the command appears in the pull-down menu. The '7' means you could have called "find" by typing @-7 without going to the menu. As you use Desk-Mate, you will come to remember that @-7 means "find" in those applications that have the find command, and start using it to speed up your work.

Future CoCos will have an "alternate" key (ALT) according to the Desk-Mate manual. Therefore, reference is made to [ALT]-7 and similar keystrokes throughout the manual. Since no CoCos have an "alternate" key yet, the '@' key substitutes.

As co-author of the TIMS database programs, there are features in the Index Cards personal filing system that I appreciate. As in any database manager, you must predefine and name fields for each record. Field lengths must also be predefined. This also is typical of most database managers. There can be up to 22 fields, and there seems to be no limit on field length. Since the file is memory resident, there is a trade-off. If the records are short, you can get quite a few into the file. If they are long, only a few will fit.

You can designate which fields to sort on and define primary, secondary and tertiary sort fields. This means the program sorts based on the primary field until it finds identical entries. When this happens, it sorts these records according to the contents of the secondary or tertiary field, as necessary, to order the records. Since the complete file is in memory, sorts and searches are fast.

Individual records can be printed. Individual records can be marked and printed, or you can print all records in the file. You can also select which fields to print. I have found no way to suppress printing the field names, nor have I found a way to print to a disk file so the records can be transferred into the Text Editor. These are unfortunate omissions. Many times one does not want field names printed. If you could suppress printing field names, a mailing list could be set up and mailing labels printed.

Another possible use for a filing program is in researching a report or school assignment. Notes can be kept in the *Index Cards* program, sorted in various ways and certain ones selected for inclusion in your final document. Unfortunately, those notes cannot be sent to a document file. You have to print them and then retype them into the *Text Editor*.

When entering a record, you have all the editing tools that are also available under the *Text Editor*, so there is little new to learn when you use *Index Cards*.

Telcom is an adequate telecommunications package. I have used it on both bulletin boards and for direct file transmission. As it comes, it requires the RS-232 ROM pak in the Multi-Pak Interface. However, OS-9 owners who have experience in customizing system disks will be able to make it work through the CoCo serial port. This means using the old RS-232 driver with a device discriptor for the serial port. I have not tried this; if you do this successfully, please write and we will share your results.

Upon entering *Telcom*, a status display is presented that lets you configure a file for a particular communications service. Since a number of status files is allowed, you give each a name. Next, logon information can be defined, such as your name and password, which is sent when you press @-8 and @-9. Next, enter your serial port device name,

which is /T2 as the program is supplied, but which may also be something else as noted above. You can then change the parameters' Baud rate, word length, parity, stop bits, line feeds and echo. The default settings are the most typical ones encountered. If you have a 1200 Baud modem, you need to change the 300 Baud default. If you are going to communicate with an IBM mainframe or type to a friend, you need echo on.

Once the file is saved, it can be selected and opened each time you enter *Telcom*, then go directly to the terminal or memory modes.

Terminal mode is what you need to communicate interactively with another computer. All information you and the other computer transmit is stored in a revolving, 13K-byte buffer. When the buffer gets full, *Telcom* goes to its beginning and writes over the contents at the beginning. The buffer contents can be viewed from the Memory mode.

There are a number of other things that can be done from Memory mode. The file menu gives options to open (load) a text file with a .DOC extension into the buffer. You can also save, erase or print the buffer. The .DOC extension is automatically added when the buffer contents are saved.

Files can also be received from another computer or sent. If an extension is supplied ("Send" requires an extension), any *Desk Mate* or OS-9 file can be transferred. Transfer is made directly from or to the disk and the file is not written to the screen. An eightbit word length needs to be used to transfer non-text files, so you might as well set up for eight bits in your status files. For the transfer to work, the other computer must recognize XON, [CTL]-Q and XOFF, [CTL]-S. Most computers recognize the control characters,

which mean start sending and stop sending, respectively. *Telcom* does not recognize any error checking protocols such as XMODEM.

Paint is a four-color picture editor with a variety of tools, like pencil, box, circle, eraser, text and others. Shapes can be filled with various colors and patterns selected from a palette. You are also able to devise your own patterns for the palette.

Your pictures can be printed in black and white on any Radio Shack printer that works with your CoCo. Color pictures can be made using a Radio Shack Ink-Jet printer. Non-Radio Shack printers are not supported, which is no surprise. Of course, non-Radio Shack printers work with all the non-graphics applications.

Finally, the 186-page Desk Mate book provides excellent tutorial and reference sections. This documentation is many times better than that provided with Tandy 1000 Desk Mate.

For the bottom line, should you buy Desk Mate or recommend it to a new, still-wet-behind-the-ears CoCo Owner? Should this be recommended to the longtime owner who has quit using the machine because of user-hostile software? Absolutely! If used at the point of sale, it could sell bunches of CoCos. And being OS-9 based, it will not become obsolete on future machines. On the other hand, experienced users may already have the application software they need.

Finally, don't think that just because you need only a text editor, you should not buy *Desk Mate*. If you don't have the other applications that *Desk Mate* includes, it will probably be worth your while to buy it and discover what spreadsheets, calendars and file programs can do for you.

ASSEMBLY LANGUAGE PROGRAMMING for the TRS-80 COLOR COMPUTER

At last . The book exclusively for you and your CoCo II You've learned BASIC and are now ready to learn assembly language programming. This hands on guide begins with the basics and progresses to the <u>expert</u> level; revealing programming conventions and techniques and <u>all</u> the internal capabilities of the TDP 100, CoCo 1 and 2. At every step of the way are illustrations, sample programs, and plain English explanations. All sample programs are shown as assembled with Radio Shack's EDTASM+ cartridge. Plus, a complete chapter explains how to use all EDTASM+ capabilities. This book describes how to write subroutines, interrupt handlers, programs that control the graphics display modes, cassette, disk, keyboard, sound, joysticks, serial t/O, interrupts, and use of ROM is resident subroutines. Not only the MC6809E microprocessor described, but also the video display generator (VDG), peripheral interface adapters (PIA), and

how they all work together. This book is suitable as a high school or college textbook.

<u>CHAPTERS</u>: The Binary Number System · Memory and Data Representation · Introduction to MC6809E Microprocessor - Addressing Modes of the MC6809E · MC6809E Instruction Set · Assembly Language Programming with EDTASM+ · Assembly Language Programming - Assembly Language and Extended Color BASIC · Internal Control and Graphics · Technical Details.

PRINTER UTILITY

Changing Printer Parameters in Pascal

By Dennis H. Weide

If you're fortunate enough to have a printer for your CoCo, you know how fast a small box of paper disappears when writing and debugging programs. By changing printer parameters, it is possible to increase page capacity or use non-standard paper and index cards available for tractor feed printers. Setprinter is a machine language program that, when executed, allows you to send special control codes to the printer to change parameters.

What's a Control Code?

One advantage of dot-matrix printers over other types is that printer parameters can be changed via program control. Under normal conditions, most dot-matrix printers are set for 80 columns and 66 lines per page. This default font is called pica print. Changing to elite print increases the width of the page to 96 columns. Changing the line spacing to 1/8th inch instead of the normal 1/6th inch increases the page

length to 88 lines. That's a 60 percent increase in page capacity. See Table 1 for the page capacities of other print fonts.

For the purpose of this article, we'll

For the purpose of this article, we'll discuss the Epson MX and FX series printers since they are some of the more popular printers around. To change from pica print (10 characters per inch) to elite print (12 characters per inch), enter the line that follows. (ASCII code 27 (CHR\$(27)) is the decimal value representing the ESCAPE key.)

PRINT#-2,CHR\$(27);"M";

To change the line spacing from the normal 1/6th inch to 1/8th inch enter this line:

PRINT#-2,CHR\$(27);"0";

To change the page length from 88 lines to 80 lines so shorter paper can be used, enter:

PRINT#-2,CHR\$(27); "C";CHR\$(80);

This assures that all form feeds work properly when sent to the printer.

This becomes tedious if changing paper sizes or page layout very often. A BASIC program could do all this for you, but it would have to be loaded and run each time needed, wiping out any other BASIC program in memory.

That's where Setprinter comes in, It's an address-independent machine language program that can be loaded and executed while BASIC programs reside in memory.

Table 1 Page Capacity (Including All Margins)

Font	Columns	Lines	Characters	Capacity
pica	80	66	5280	100%
elite	96	66	6336	120%
condensed	136	66	8976	170%
pica	80	88	7040	130%
elite	96	88	8448	160%
condensed	136	88	11968	227%

Dennis Weide is a communications technician for AT&T in Albuquerque, New Mexico, where he programs AT&T and IBM PCs. He enjoys making toys and teaching computer programming.

To change printer parameters, execute the program and enter the letters corresponding to the functions to be installed. The program sends the proper control codes to the printer. You can exit the program and call it back later without having to reload it,

The program was written in PASCAL and compiled using DEFT Workbench. Listing 1 is the source code for Setprinter. For those who are new to computers, let me explain a little about PAS-CAL.

PASCAL versus BASIC

Like BASIC, PASCAL is a high-level programming language used to create computer programs. Unlike BASIC, which is usually interpreted, PASCAL is compiled. (Note: BASIC is usually interpreted in microcomputers but it can be compiled.)

In an interpreted language such as BASIC, the microprocessor in the computer reads each program line, converts it to the appropriate machine instruction, then executes it. Each time a program line is encountered, the microprocessor must repeat these steps. Therefore, BASIC instructions tend to execute more slowly than machine language instructions. An advantage of BAStC is that the program can be modified and immediately run to see the results. This makes debugging a BASIC program very simple.

In a compiled language such as PAS-CAL, you must first write the source code then compile it to form the machine language program. All this must be done before executing it the first time. If a bug occurs in the program, the source code must be modified and recompiled before it can be executed. Even so, PASCAL has many advantages over BAStC. Because the final program is machine language, it executes up to 20 times faster than BASIC and usually requires less source code than an equivalent BASIC program.

The Program

Now, let's look at the source code for Setprinter (Listing 1). After being compiled, the program occupies 5,610 bytes of RAM. It's relocatable so it can be moved anywhere in memory. Be sure to protect the program by loading it into graphics memory or using the CLEAR command (see Getting Started with Color BASIC).

As in standard PASCAL, the program name comes first (Setprinter) followed

Table 2 Addresses to Change for BASIC Modification of Control Codes (control codes shown are for the Star SG-10 series)

Listing 1: SETPRT
   (** SETPRINTER program by Dennis H. Weide **)
   (**
                                                 **)
   (**
                       (C) 1985
                                                 **)
   (**
                                                 **)
        Written in Pascal using DEFT Pascal
   program SETPRINTER(input, output);
   var PRTFILE : text;
       CODE1, CODE2 : integer;
       CHOICE : char;
   procedure PRINTl;
      begin
          write (PRTFILE, chr(27));
          write (PRTFILE, chr(CODE1));
          write (PRTFILE, chr(CODE2))
      end:
   begin
      rewrite (PRTFILE, ':-2');
```

by the variable declarations. In my listing, commands are listed in lower-case characters and variables are listed in uppercase.

PRTFILE is a text file used as a printer buffer. CODE1 and CODE2 are integers (whole numbers) that are assigned the values of the control codes

required.

Procedure PRINTI is a subroutine to send the proper control codes to the printer. Subroutines in PASCAL must be declared in the beginning the same as variables. The three Write statements after the procedure declaration constitute the actual subroutine. They print ASCII 27, CODE1 and CODE2 to PRTFILE, the printer buffer declared earlier.

REWRITE instructs the processor to use the text file *PRTFILE* as a buffer for the printer. Every WRITE or WRITELN to *PRTFILE* after the REW RITE command is buffered for output to the printer.

CHOICE is a character variable used to determine the menu choice. Unlike BASIC, PASCAL variables are not initialized when the program is first executed, so CHOICE must be set to null. If it's

```
CHOICE: = 1 1;
while CHOICE < 'V' do begin
    CODE1:=0;
    CODE2:=0;
    page;
    writeln ('
                          program menu');
    writeln:
    writeln ('A. PICA
                                 L. N.L.Q. ');
    writeln ('B. ELITE
                                M. FORM FEED!);
             ('C. CONDENSED
    writeln
                                 N. LINE FEED');
             ('D. EXPANDED ON O. 1/8 IN.L.S.');
('E. EXPANDED OFF P. 10/144 L.S.');
    writeln
    writeln
             ('F. DBL STRIKE
                                 Q. 7/72 IN.L.S. 1);
    writeln
             ('G. EMPHASIZED
                                 R. LEFT MARGIN');
    writeln
    writeln ('H. ITALICS
                                 S. RIGHT MARGIN');
    writeln ('I. SUPERSCRIPT
                                 T. PAGE LENGTH');
    writeln ('J. SUBSCRIPT
                                 U. INIT PRINTER');
    writeln ('K. PAPER OUT
                                 V. END PROGRAM');
    writeln;
                ENTER ONE OF THE ABOVE >');
    write ('
    readln (CHOICE);
    case CHOICE of
         'A': begin
              CODEI:=66;
              CODE2:=1;
              printl
          end;
         'B': begin
              CODE1:=66;
```

The Last Word

tor OS-9™ The ultimate in word processing power and convenience.

- Pop-down menus accessible from mouse, joystick or keyboard.
- Open files by just pointing to names from a directory menu.
- Fast on-screen formatting.
- 22,000 word on-line dictionary.
- Use with WORD-PAK or it's own hires screen.

 Move freely in files of any size, (even bottom to top).

Many other features.

not set to null at the beginning of the program, it is set to the value currently residing in its memory location. Upon execution, everything may work fine. But if executed a second time, the value of CHOICE remains set to its former value and program execution stops.

WHILE sets up a loop that continues to execute as long as CHOICE is less than 'V' (End program).

Two variables, CODE1 and CODE2, are set to zero each time through the While loop. If a second control code is not required for a specified parameter, CODE2 equals zero when sent to the printer.

PAGE is the same as CLS in BASIC. It clears the screen and homes the

The WRITE and WRITELN statements correspond to BASIC's PRINT statements. If a file is not specified, the characters or variables following the statement are printed on the screen.

READLN waits for an input from the keyboard the same as the BASIC statement INPUT.

CASE CHOICE OF works like BAS-IC's ON X GOTO. After the value of CHOICE has been entered, the CASE statement determines which of the

BEGIN statements following it should be executed. BEGIN statements must always conclude with an END state-

One important asset of PASCAL is that variable names can be more than two characters long, making it easier to name them. In BASIC, A\$ and A1\$ are two separate variables. But AIS and AIB\$ are the same since the CoCo only recognizes the first two letters of a variable name, Thus, CODE1, CODE2 and CHOICE are easier to understand than C1, C2 and C3. Notice that strings in PASCAL don't use the dollar sign (\$) as they do in BASIC.

Other Program Functions

For those who program in PASCAL or are more advanced in BAStC programming, here are some tips for modifying the program to suit your printer. Setprinter loads at address 3592. Listing 2 is a short BASIC program that creates an ML program to set the Baud rate, If you run the printer at a speed other than 600 Baud, LOADM"SETPRT", key in Listing 2 and then run it. It appends the ML program to Setprinter and saves it to disk. Thereafter, every time you load and execute Setprinter it automatically

Table 3 Start Addresses for the Menu Option Listing (each address indicates the start of the letter designating the menu choice)

Start	Мени
Address	Option
4004	A) pica
4020	L) N.L.Q.
4047	B) elite
4063	M) form feed
4093	C) condensed
4109	N) line feed
4139	D) expanded or
4155	O) 1/8 in. L.S.
4187	E) expanded of
4203	P) 10/144 L.S.
4235	F) DBL strike
4251	Q) ⁷ / ₇₂ in.L.S.
4284	G) emphasized
4300	R) left margin
4332	H) italics
4348	S) right margin
4381	I) superscript
4397	T) page length
4429	J) subscript
4445	U) init printer
4478	K) paper out

sets the computer to the new 8 and rate. The second data element (Hex 01) of Line 140 is the Baud rate. Change that value to the hexadecimal value for the speed you use. Currently, the program sets the 8 and rate at 9600.

As written, this program works for the Star and Gemini brand printers. If you have an Epson or some other brand, refer to Table 2 for the addresses to change, If using a PASCAL compiler, change the values in the source code listing (Listing 1). If not, use the BASIC POKE command and the printer manual to load the proper values into the proper addresses.

Since not all brands of printers are created equal, you may want to change some of the program menu options. Again, if using a PASCAL compiler, change the source code listing. If not, refer to Table 3 for the start address of each menu option. This is the address of the letter corresponding to option title. For example, decimal address 4004 contains decimal 65, which represents the letter 'A' in the option title A. PICA. If you wish to change it to print A. STANDARD, POKE the appropriate addresses with the ASCII code for the letters to be printed on the screen. Be careful not to exceed the original word length or a portion of the program may be overwritten.

I wrote three different PASCAL versions of this program and found the one with the most source code generated the shortest machine language program. That's the version I've included here. I've also included an ML copy of the program for RAINBOW ON TAPE for those who want the program but don't have a PASCAL compiler. Follow the guidelines mentioned to modify the ML version using BASCC.

For information on how to obtain a machine language copy of the Setprinter program for your printer (for a small fee), write to me at 14201 Marquette N.E., Albuquerque, NM 87123. Please include a self-addressed, stamped envelope for your reply.

One last comment. I bought the DEFT Workbench in an effort to learn PASCAL programming. It's an outstanding package of programs from the novice's point of view. However, the software authors warn that this is designed primarily for those who know PASCAL already. Still, with a few PASCAL books from the local bookstore and DEFT Workbench, I've come a long way. My compliments to the people at

BARDEN'S BUFFER

Disassembling the Secrets of ROM

By William Barden, Jr. Rainbow Contributing Editor

ne of the highlights of February '86, for me, was the RAIN-BOWfest/PCMfest in Palo Alto, California. Even torrential rains couldn't keep the CoCo nuts and Tandy MS-DOS devotees away. (It was rumored that Apple had commissioned a cloud seeding operation over the Silicon Valley, prompted in part by the 'fests, but this was never substantiated . . .) While touring the exhibits at the show and killing some time before my seminar on computer languages, I noticed a cryptic sign that simply stated, "Another Interesting Seminar This Way," with a CoCo Max-like arrow pointing down a somewhat dimlylighted hallway. Always looking for the unusual, I walked down the corridor. Ahead I could hear a speaker. I arrived at a room packed with people.

Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years experience in the industry covers a wide background: programming, systems analyzing and managing projects ranging from mainframes to microcomputers.

"What seminar is this?" I asked a fellow near the entrance.

"You're not from MicroSoft or Radio Shack, are you?" he queried, looking me up and down.

Apparently satisfied that I wasn't wearing the charcoal-gray attire of Radio Shack types or the sandals and jeans of MicroSoft programmers, he stated, "This is a seminar on the secrets of MicroSoft BASIC. It describes how to decode ROM and other types of programs. You're in luck — it just started."

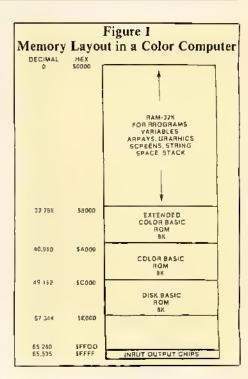

Sure enough, the speaker had mounted the podium and loosened his tie. It looked like a serious seminar,

What's in ROM?

"Maybe you didn't know that you can easily decode ROM in the Color Computer and get all kinds of information about ROM calls, programming techniques and system parameters," he began. "That's what this seminar is about — to reveal the mysteries of ROM by disassembly.

"First let's take a look at what's actually in the Color Computer, Take a look at this slide." The diagram shown in Figure 1 appeared.

"This is the memory layout of the CoCo. The 6809 microprocessor used in

the CoCo addresses 64K of memory, or 65,536 bytes. One K equals 1,024 locations, of course. How that memory is divided up into RAM, ROM and input/output devices is pretty much up to the system designer who uses the 6809. Here's how Radio Shack did it though:

The first 32K (32,768 bytes) is RAM, or random-access memory. RAM is used to store system variables such as joy-stick values, addresses of commonly used software such as the command interpreter and pointers to variables and sections of memory. RAM also stores your actual BASIC or machine language program, BASIC variables and arrays, text and graphics screens, string space and BASIC stack.

"The upper 32K is generally used for ROM, or read-only memory. The CoCo contains a ROM that implements Color BASIC in locations 40960 through 49151 (\$A000 through \$BFFF). With Extended Color BASIC, there's another ROM in locations 32768 through 40959 (\$8000 - \$9FFF) that adds more programs for Extended Color BASIC functions. And in Disk BASIC, there's yet another ROM in the disk controller pack that adds more programs to handle Disk BASIC functions, this time in locations 49152 through 57343 (\$C000 - \$DFFF). The high portion of memory in the \$FF00 area is used for dedicated input/output chips called PIAs. They control cassette, serial output, graphics modes and other operations."

"By the way, does anyone know what the dollar sign stands for?" asked the

"Big bucks in the CoCo!" shouted a wise guy in the audience,

After the laughter died down, the speaker continued, "Nice guess, but it stands for hexadecimal.

"What's really in the ROM areas? Nothing less than the entire BASIC interpreter, along with Extended BASIC and Disk BASIC! It's a complete set of instructions that shows how to implement an entire BASIC interpreter and includes such things as command interpretation, cassette and disk input/output driver programs, graphics programs to draw circles and lines and a math package for floating-point arithmetic!

"Of course, in one way this is similar to saying that a schematic diagram of a television set tells exactly what's in the TV. Unless you know something about decoding it, it's not too valuable. But that's what we'll learn here — how to decode it."

Machine Language versus Assembly Language

"When MicroSoft or Radio Shack writes programs, they start with assembly language code. Here's a sample..."
Another slide flashed on the screen (Figure 2).

Figure 2 Scroll Screen Subroutine -S LOO 32-X load two bytes STD X++ store one row up

A34E A351 A353 A356 A358 A358 A35A	80 25 04 80	81 0SED F4 60 A920	SCOLLS	EDD STD CMPX BLO EDB JSR PULS	3Z,X 4X++ #LINE15 SCROLLS #\$40 BLANKL A,8,X,PC	load two bytss store one row up lest line? go if no blank cheracter fill last line with blanks restore regs and return
--	----------------------	--------------------------------	--------	---	---	--

"This is the actual code in Color BASIC to scroll the screen. It moves two bytes up one row at a time for the last 15 lines of the screen and then blanks out the last line of the screen. The BASIC interpreter is made up of dozens of routines such as this, some about the same order of complexity, some more elaborate.

"After MicroSoft wrote the Color BASIC interpreter and checked it out, the machine language corresponding to this assembly language code was burned into ROM. The machine language consists of the actual ones and zeros that represent the assembly language

instructions. In this case, for example, you'd see EC, 88, 20, ED, 81, 8C, 5, E0, 25, F6, C6, 60, BD, A9, 2D, 35 and 96 values in hexadecimal for the seven instructions of the screen scroll routine."

"What about the source code?" asked a CoCo user in the front row. "Can't we buy it from someone?"

"Not really," the speaker replied. "MicroSoft doesn't bandy it about. They'd like to prevent others from producing competitive BASIC interpreters. The source code isn't anywhere in the machine language either. The machine language just includes thousands

The QT

The QT family of multi-user, multi-tasking computers supports from 4 to 20 users. Currently 9 models are available, ranging in price from \$ 1,595 to \$ 8,795. Models are available with the Motorola 68008, 68000 or the new 32 bit 68020 CPU. CPU speeds range from 8 Mhz to 16.67 Mhz; RAM size from 128K to 2048K and ROM from 2K to 256K. All the QT's have a built in SASI interface and will support any hard drive. All QT's include OS9/68K, the multi-user operating system with Basic, utilities, word processing and spreadsheet programs. The OT's take up less than one cubic foot of space.

The QT series:

The basic QT has 128K RAM, 68008 CPU, 8 Mhz and will support 4 users and 2 printer ports. The single floppy version is priced at \$ 1,595 (List \$ 2,095) and is field upgradeable to 512K RAM and 20 Meg hard drive. This system sells for \$ 2,995 (List \$ 3,595).

The OT Plus series:

This QT has 512K RAM, 68000 CPU, 10 Mhz and supports 4 users and 2 printer ports. The single floppy version is priced at \$ 2,095 (List \$ 2,695) and is field upgradeable to 1024K, 8 serial ports and hard disk. The QT Plus 4 user system with 512K RAM and 20 Meg hard drive is priced at \$ 3,495 (List \$ 3,995). The 512K upgrade costs \$ 395 (List \$ 495).

This QT has 2048K RAM, 68020 CPU, 12.5 Mhz and supports 4 users and 1 printer port. This system can be expanded to 20 users with 16.67 Mhz. The QT 20 with a 20 Meg hard drive sells for \$7,495 (List \$8,795).

315/474-7856

of thousands of machine language instructions, which the 6809 microprocessor executes to implement the BASIC

interpreter functions.

"Now here's the big question: Is it possible to reverse the assembly language process — instead of producing machine language code from assembly language code, to produce assembly language code from machine code data? With a little bit of effort, yes. Although, you'll probably never be able to reproduce all of the nuances in the assembly language source code it is possible to get a very good idea of what's going on in the machine language code and even construct your own assembly language source code."

Z-Bug and Disassembly

"The first tool for this is the Z-Bug debugger of the Radio Shack Disk EDTASM program. This program, which every serious CoCo assembly language programmer should have, consists of an assembler, editor and debugger. The debug portion includes a disassembler that converts the machine code in ROM (or RAM) to equivalent assembly language instructions. To get into Z-Bug, do this . . ." Another slide flashed on the screen (Figure 3).

"This is the Disk BASIC version of EDTASM, but the same general procedure is applicable for the cassette version. First, run DOS when the Disk Extended BASIC message is on the screen. That'll bring up a menu of items for COLOR TRSDOS from which you can EXEC A PROGRAM. The program to execute is EDTASM/BIN (32K and above) or EDTASMOV/BIN (16K).

"Once you're in EDTASM, the DISK EDTASM+ title is on the screen, together with an asterisk prompt. From there, enter Z, for Z-Bug, and a '#' sign is displayed, indicating that you're in Z-

Bug.

"Now press the 'M' key, followed by ENTER. Entering an 'M' sets the Mnemonic mode, meaning that debug will display 6809 instruction mnemonics, rather than hexadecimal data. Now, just as an example, enter T A34E A35E, followed by the ENTER key. The display looks like this (Figure 4).

"The T command in Z-Bug displays a block of memory locations. In the Mnemonic mode, these memory locations are displayed in their symbolic instruction formats. The column on the left of the display is the starting locations for the instructions. The column

Figure 4 Typical Trace in Mnemonic Format

OA34E/ LOO <20,X DA351/ STO ,X++ OA353/ CMPX #5EO OA356/ BLO DA34E OA358/ LOB #60 DA35A/ JSR >OA92D OA35O/ PULS A,B,X,PC

on the right is the actual instruction in the location. You'll have to coordinate what's in the right-hand column with the instruction mnemonics found in Barden's Color Computer Assembly Language Programming or the Disk EDTASM manual. The CMPX #5E0, for example, is 'compare the contents of the X register with the immediate value \$5E0'. The important thing is that Z-Bug has gone through a reverse assembly process, called disassembly, translating the machine code into the symbolic form of the instruction."

How Does Z-Bug Disassemble?

"But how does Z-Bug know enough to disassemble the machine language?" asked a young hacker with an "I Love my CoCo" button fastened to his "Twisted Sister" tee-shirt.

"Well, the machine language code always starts with an operation code byte," replied the lecturer. "Each type of instruction has a unique op code. Z-Bug uses this to find an equivalent mnemonic in an internal table. It also knows the format of each instruction and can determine whether data in the instruction is an address, as for a BR(anch) instruction, an immediate operand, as in this example, or some other operand form. The operand or operands are printed after the instruction innemonic,"

"Yeah, but if Z-Bug starts in the middle of an instruction . . .," persisted the hacker.

"Good point," the lecturer went on.
"If the middle of an instruction is specified for the start, you'll get garbage instructions for a time, before Z-Bug straightens itself out. Suppose you started from A34F instead of A34E. You'd get

#A34F/ EORA #20

in place of the correct

#A34E/ LDD <20,X.

You can use either the T command to display the contents of a block of memory on the CoCo screen, or the TH form of the command to dump the contents on the printer. The TH ('H' stands for Hard copy) displays the same information as the T command. If you want a complete listing of all the instructions in both Color BASIC and Extended Color BASIC, simply do a

#TH 8000 BFFF

command, and it returns about 8,000 lines of instructions on the screen or line printer — about 145 pages worth."

Special Symbols Used in Z-Bug Disassembly

"Z-Bug uses a few special symbols in disassembly. A '#' sign is used to denote an immediate value. A greater-than sign, or right arrow, indicates a jump address. A less-than sign indicates a load of a memory location, rather than immediate data. Two question marks are used when Z-Bug can't find an equivalent instruction for a data value in memory. This can occur because not all permutations of codes are legitimate instructions.

"Here's an important point — all numeric data is in hexadecimal, rather than decimal. The display of data can be changed to decimal by entering an D10 into Z-Bug, specifying an output base of decimal instead of hexadecimal, but you'll probably want to work in hexadecimal anyway — it's actually more convenient, once used to it."

Instructions versus Data

"ROM contents consist of more than just instructions, however. Along with the instructions there is data. Data in Color BASIC, Extended Color BASIC and Disk BASIC generally consists of these types of things:

"Indirect Jump Tables — This table is found at the beginning of Color ROM at \$A000. It consists of seven addresses for reading a key, generating a character, cassette on, read a cassette block, write a cassette block, reading the joysticks and writing a cassette leader.

"Tables of Data — These include such things as 'token' tables, tables of constants to be moved to low address RAM, other jump tables, and the like — anything that can be conveniently tabulated. The sine wave used for a cassette tone, for example, is produced from a table of sine wave values.

"Text Messages - These include

DynaStar

DynaStar is our most popular word processor for OS9. DynaStar works with O-Pak and WordPak I and II. DynaStar will also work with Level II OS9, which means that an upgrade will be available for the new CoCo that runs Level II OS9. DynaForm, the text formatting part of DynaStar has Mail-Merge, an extra cost option on other word processors.

A terrific buy at only \$49.95 each.

Add \$3.50 shipping

O-Pak

The first OS9 product and still our most popular!

NEW!!! COMPLETE SOURCE for O-Pak now available!!! (In C and assembler)

For those of you who always wanted to know how we did it. here is your chance. The complete source for O-Pak is now available for only \$70.00. Of course, you have to show that you own a copy of O-Pak to get it, or buy both O-Pak and Source for only \$100.00. As always O-Pak is only \$34.95.
Add \$3.50 shipping

Disto Display 80

The Disto Display 80 Enhanced gives a true 80 column display like the 'big boys' have. The Dispolay 80 is an add-on adapter for the Disto Super Controller (See Below) Basic software is in the controller and OS9 software is only \$20.00. The Disto Display 80 is ONLY \$119.95.

To use the full potential of the Display 80 you will need a video driver. UVD is the best we have seen because it works with all versions of the CoCo and requires NO soldering! Only \$29.95 Add \$3.50 shipping

Disk Drives

You can buy cheaper drives for your CoCo but you can't buy better! Even Tandy sells cheaper drives than we do. We don't want to lower our standards so we still sell the best drive for your money. We only sell double sided drives in the best case we could find with a power supply that won't quit. We use the best controller on the market (The new Disto Super Controller) the best drives (Teac) and our case.

All drives are 1/2 height, double sided and our cases will hold two drives.

Drive 0 DS 40 \$295.00 add \$120 for drive 1. Drive 0 DS 80 \$310.00 add \$130 for drive 1.

RS Disk Basic ROM 1.1 \$20.00 Call for custom cable

Add \$5.00 shipping

Cross Assemblers

Create 68000 code on your CoCo!!

At these prices it would be worth it just for the 68000 alone, but we also give you the ability to work with the 1802/5, 6800/01/11/03, 6804, 6805, 6809, 6502/3, 8080/5 8048, 8051, Z80, and the 68000!!! Not only that, we give you the COMPLETE SOURCE too! (In C) All this for only \$200.00! Whew!

Add \$3.50 shipping

Brian Lantz's UniCharger

With UniCharger on your system you will think that you're running Unix. UniCharger adds 29 commands to your basic system that really makes it shine. This is Brian Lantz's first major project for OS9 and it showed the rest of us what he can do. Turn your computer into a real powerhouse with UniCharger, \$150.00 and worth it!

Add \$3.50 shipping

315/474-7856

titles, error messages and prompt messages.

"So you can see that you won't find instructions in all locations of ROM—perhaps 95 percent of ROM actually consists of 6809 machine language code—the rest is data. The data, by the way, disassembles as garbage instructions."

"So how do you display data?" questioned a female CoCo freak, while cuffing her 10-year-old as he tried to disassemble a Tandy 3000.

Displaying Character Data

Well, a lot of data consists of ASCII characters. One of the best places to start for a disassembly of any program is with character data such as messages or tables of commands. Z-Bug allows the display of the equivalent ASCII data if an 'A' for ASCII is specified after the Z-Bug prompt. Any output is displayed as either a text character, if the character is printable, or as a blank, as shown in the next slide (Figure 5).

Figure 5	5
Display of ASCII D	ata by Z-Bug

OA152/	
ŰA153/	1

"However, this display is not very condensed — it doesn't show long strings of text as found in messages. The short BASIC program SCANTXT, in the next slide, packs ASCII data together so you can easily scan through memory (Figure 6).

Figure 6 SCANTXT Program

100 'SCAN FOR TEXT

11D CLS

120 INPUT "START"; ST

160 IF PEEK(1)>=32 THEN PRINT CHR\$(PEEK(1)); ELSE PRINT

170 NEXT 1

"SCANTXT asks for a start address and an end address. These addresses can be entered with a hexadecimal prefix — '&H' in BASIC. SCANTXT then scans through the block, displaying the current address and any text data. Data that is not text data is represented by a period. A typical display from the program is shown in the next figure (Figure 7).

Figure 7 SCANTXT Display

TANDY, MICROSOFT. . M. 1537

■ = GRAPHIC CHARACTERS

"A recommended way to scan through a program is to use a program such as SCANTXT to find the messages first. This provides valuable clues to the structure of the program, as the area associated with each message can be found by scanning memory for addresses representing the start of known messages. Here's an example: Scanning through Extended BASIC yields a table of error messages at \$ABAF. The table starts with 'NF.' It would be advantageous to find out where in memory a Next Without For error message is generated. Unfortunately, Z-Bug does not have a Find function. However, BAStC comes to the rescue again with the program in the next slide (Figure 8)."

Figure 8 FINDSTR Program

Z3D IF S2\$=S1\$ THEN PRINT

220 NEXT J

"This program scans memory between any start and end addresses, looking for any specified character string or any 16-bit address value. The 16-bit address value takes precedence over the string; don't enter anything for either one or the other. Finding address values helps correlate which parts of the program call subroutines at specific addresses."

Finding the Gold in Them Thar Codes

"Now that we know an approach to finding things in ROM, let's mine for gold and find some of those hidden subroutines. One thing I should mention, however, is that there are books that list source code for BASIC and Extended BASIC, Color BASIC Unrayelled, Extended BASIC Unravelled and Disk BASIC Unravelled are excellent reconstructions of the source code in ROM and a bargain at \$19.95 each (\$49.95 for a three book set plus \$3 shipping and handling). Contact Spectrum Projects, Inc., P.O. Box 21272, 93-15 86th Drive, Woodhaven, NY 11421. The technique used in these books is to publish code that looks exactly like an assembly listing, but with the opcode byte deleted. I suspect that the comments on this code are actually better than MicroSoft's documentation! It was obviously a labor of love by a dedicated programmer. Even though publishing code in this fashion might be analogous to waving red listings in front of a MicroSoft bull, what we're doing here poses no problems as Z-Bug itself provides the tools for examining memory,"

At this point, the speaker cast an anxious glance at the door to see if he could detect any gray suits or sandal-clad hackers. He continued.

"Another useful book is called 500 Pokes, Peeks in Execs for the TRS-80 Color Computer (Spectrum Projects, Inc., \$16.95). It provides entry points for subroutine in ROM, along with locations of system variables.

"Anyway, let's see if I can describe the highlights of what can be found in ROM by using Z-Bug."

Input/Output Drivers

"I mentioned the indirect jump table at the start of Color BASIC ROM at \$A000. Use the seven addresses here to find the subroutines for getting a key press, generating a character, turning on the cassette motor and so forth. Let's try the first address, the famous POLCAT subroutine described even in Radio Shack documentation.

"The address in the jump table is AICB. Disassembling ROM starting from this area results in the code shown in the next slide (Figure 9).

Figure 9 POLCAT Disassembly DAICB/ PSHS U,X,B DAICD/ LDU #DFF00 OA100/ LDX #152 DAID3/ CLRA OA104/ DECA DA1DS/ PSHS XJA 0A1D7/ STA 2,U DAID9/ ROL 2,U DAIDB/ BHS 0A220 DA1DD/ INC 0,5 0A10F/ BSR DAZ3A DAIE1/ STA 1,S 0A1E3/ EORA X DAIES/ ANDA 3X 0A1E7/ LDB 1,5 >X+ DAIE9/ STB DA1EB/ TSTA DA1EC/ BEQ 0A1D9 DA1EE/ LDB 2,U STB 2,5 0A1F0/ LDB #OFB 0A1F2/ DA1F4/ ADDB #B DA1F6/ LSRA 0A1F7/ BHS DA1F4 DA1F9/ ADDB 0,S DA1FB/ BEQ DAZ4S DA1FD/ CMPB #1A DA1FF/ BH1 **DA247** DA201/ ORB #40 0A203/ BSR 0A22E 0A205/ ORA >11A BNE 0A20B/ 0A20C DA2DA/ ORB #20 DA20C/ STB 0,5 DAZDE/ LDX >11B 0A211/ BSR DATAE LOB DA213/ #DFF DA215/ BSR DAZ3B DA217/ INCA 0A21B/ BNE GAZZO LOB Z,S DA21A/ DA21C/ BSR DA23B CMPA 1,5 DA21E/ DA220/ PULS AJX DA222/ BNE DA22B DA224/ CMPA #12 DA226/ BNE DA220 DA22B/ COM >11A DAZZB/ CLRA DA22C/ PULS B,X,U,PC

"I won't go through the entire subroutine because it's quite long — about 74 instructions. However, there are a couple of points to mention about decoding subroutines like this. "The first thing to look for is the end of the subroutine. This is often an RTS instruction, but may also be a PULS instruction, as in this case. The PULS instruction pulls data from the stack and in some cases also pulls a return address and puts it into the PC register. This action is the same as an RTS, Between the start of the subroutine and the RTS or PULS, make certain that all branches (BRx instructions) are within the limits of the start and end points. Make certain that no jump is made out of the subroutine into another routine.

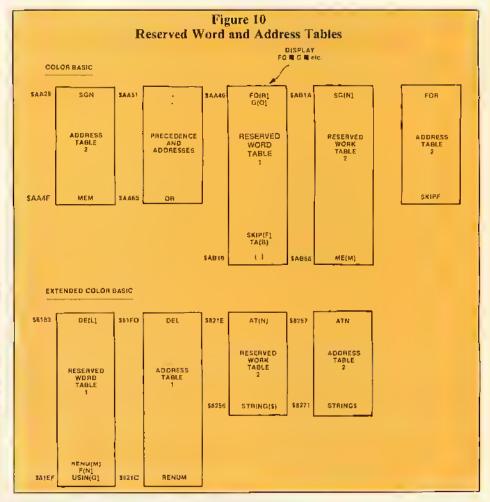

"Knowing the start and end points, look for the BSR, LBSR and JSR instructions. These instructions jump to lower-level subroutines. In the case of POLCAT, there are five BSR instructions, at AIDF, A203, A211, A215 and A21C. Z-Bug gives the absolute address of the branch instead of the relative displacement from the current instruction. This is nice, because it enables you to see immediately which branches are to the same subroutines. In this case, the BSRs at A1DF, A215 and A21C are to the same subroutine (A1DF is a second entry point) — a subroutine to actually scan the keyboard. The BSR at A203 is to another subroutine at A22E, which tests for the SHIFT key. The BSR at A211 is to yet another subroutine that delays for a keyboard debounce (if the keys were read at assembly language speed, it would read the key many times before it was released).

"A lot of code in BASIC calls a lowertevel subroutine, which calls a still lower-level subroutine, and so on. There's no question that it's a chore to untangle the nested subroutines in many cases."

"What's that strange address in the second instruction — the FF00?" asked someone in the back of the room.

"Remember that I said the \$FFXX area was devoted to input/output addresses? The very first instruction in POLCAT after the PSHS (which saves the registers) loads Register U with \$FF00. This is a PIA address, an input/output chip used for much of the I/O in the CoCo. Unfortunately, to decode BASIC and other programs requires that you have some knowledge of the structure of the Color Computer's hardware,"

There were audible groans from the audience,

"So much of the input/output is done by setting or reading PIA bits — things like cassette or sound-wave shapes, serial input or output, or in this case, reading the keyboard by looking at which row and column bits are set.

"The other input/output drivers are similar in concept to POLCAT. They do a lot of bit manipulation with the hardware."

General Locations of Other Functions

"One of the chief areas to disassemble in ROM is the reserved word table. Reserved words in BASIC are those reserved to define BASIC keywords or functions like INPUT, OPEN, RIGHT\$ and so forth. If you use the SCANTXT program, which I showed before, to scan memory for text data, you'll see several of these tables, one located at \$AA66, and one located at \$8183 (Extended BASIC). See Figure 10."

"Notice that the last letter of each word shows up as a graphics character in the display. This is because the most significant bit is set to mark the end of the word, as each word is a variable length. This is the same as adding 128 to the value of the ASCII character.

"The position of the word in the reserved word table (first, second, 14th, etc.) is used to access a table of addresses that point to the processing subroutine in BASIC ROM. Part of this table is located at \$AA29 and part at \$AB67 for Color BASIC. For Extended Color BASIC the table of addresses is located at \$81F0 and \$8257.

"To find the processing subroutine for a certain function, therefore, find the position of the function in the reserved word table, look up the corresponding address in the address table, and then disassemble that area. For example, the PEEK function is the sev-

enth entry in the second part of the reserved word table in Color BASIC—it's at location \$AB2C. The seventh address in the address table at \$AA29 is address \$B750 at address AA35. Disassembling the \$B750 area gives you the processing code for PEEK,"

Can You Learn Assembly Language Techniques from ROM Code?

"Disassembling the ROM is a challenging task, but it provides lots of little useful subroutines that can be used for a variety of things. We'll give a thumbnail list in a moment. One other benefit of disassembly, though, is being able to look at 6809 code produced by a professional software company, Micro-Soft. In digging through the disassembled instructions you'll be exposed to a variety of tricks and techniques in assembly language coding. With the disassembled code and a reference manual you'll quickly learn how to put things together in assembly language."

Interesting Areas to Look at in ROM

"Here are some interesting areas you might want to investigate. Next slide, please . . ."

Color BASIC ROM:

\$A00E - Start of BASIC

\$A0F6 — Jump to ROM pack code

\$A34E — Scrolls screen up one line,

blanks to last line

\$A44C - CSAVE

\$A498 - CLDAD

\$A82A - Sine wave generation for

cassette

\$A85C — Sine wave table of values

\$A928 — Clear screen

\$A94B — SOUND processing

\$A9B3 — Clock tic interrupt —

updates timer

\$A9DE — Joystick processing

\$B9B4 — A large section of code devoted to floating-point number processing starts here and continues almost to the end of this part of ROM

Extended Color BASIC ROM:

(\$BFFF)

\$8A09 — Renumber routine

\$A429 — DLDAD or download subroutine — bugs in some versions

\$928F — Start of graphics subroutines — another large sec-

At this point in the seminar there was a bustle in the corridor outside of the room. Two beefy men burst in, one wearing a three-piece gray flannel suit and cowboy boots, the second in jeans and sandals. They went up to the podium and literally lifted the speaker several inches off the floor.

"And that's about all the time we have for this seminar," the speaker shouted over his shoulder as he was carried off. His voice faded as he disappeared down the corridor and we could only hear snatches — "secrets of ROM... other mysterious things we haven't gotten into...bugs..."

The audience groaned in despair and I shuffled off to the RAINBOWfest seminar on OS-9...

S.S.S OUTLINER

SNAP • STUDY • SYSTEM is quick and simple. There are no forms to design or set up. Just start entering records as in a book. At any time, use the arrow keys to browse through chapter headings, pages, items. It's easy to add, revise, delete, print.

A unique and cozy filing system is used. There are NO FILE NAMES to remember ! ! !

RECORD reference notes for books, talks, guides, checklists, requirements, things to remember, note, review.

PLAN an outline or summary for reports, manuscripts, agendas, duties, any ideas or projects to be done.

KISSable OS-9

Featuring a New Text Formatter

By Dale L. Puckett Rainbow Contributing Editor

S-9 Users Group member Frank Malaney of Pataskala, Ohio, takes the spotlight this month. Malaney contributed the source code for PrintForm, a public domain program he has been distributing as "shareware" for several months. He also passed along some useful C programming tips. Rounding out our May offering is an alternative, SysGo, from Robert A, Larson at USC; another tip from Steve Goldherg in Bethpage, New York: some short c programs for beginners from Dennis J. Duke in Bessemer, Alabama, and Eric Richards in Auburn, Alabama, plus a look at a few new OS-9 products. Remember, if you have a question, a short to medium-sized program or an operating tip, we would love to share it with our readers. Send your thoughts to us at THE RAINBOW or EMAIL them to DALEP on RAINBOW's Delphi CoCo SIG or to my PPN, 70010,542 on CompuServe.

PrintForm is Modular

PrintForm, our feature offering from

Dale L. Puckett, who is author of The Official BASIC09 Tour Guide and coanthor, with Peter Dibble, of The Official Rainbow Guide to OS-9, is a free-lance writer and programmer, He serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. Dale works as a U.S. Coast Guard chief warrant officer and lives in Alexandria, Virginia.

Frank Malaney, performs most of the functions of *DynaForm* and corrects many of the printer problems that were present in early versions of this word processing software. The problems revolved around the printer setup standard used by Tandy. Most manufacturers set up their printers to only return the printhead to the left-hand margin after they receive a carriage return character, 0D Hex. Radio Shack printers, however, automatically add a line feed following every carriage return. This drives some software and most programmers crazy.

Ever since the first column, we have been preaching the virtues of OS-9's modularity, and Frank Malaney is a believer who broke the program into 18 different modules, small pieces "... to protect the sanity of the programmer," Malaney said. Breaking long programs into short segments also helps the computer, particularly a Color Computer with only 64K of memory. As you know, if you have ever tried to compile a long C or PASCAL program, most compilers generate a large number of error statements for each actual error in the source code.

"The best way to handle this situation is to correct the first error, recompile the program and then fix the next error that shows up, etc.," Malaney said. He also noted that small modules that perform a single function are much easier to debug after you get the program compiled but it still does not work properly, "It is much easier to determine which code is not working correctly and to rethink the logic when that module only performs a single task," he said.

The two-line C program, test.c, can also make your initial compiles go faster.

#include "header.c"
#include "useage.c"

Use this OS-9 command line:

OS9: ccl test.c -oa >>/p

Header.c is the name of a file that defines all of the global variables in PrintForm, Useage.c is the name of the file Malaney is checking for syntax errors, When you compile test.c with the previous command line, you are greeted with a very fast pass through the compiler and a list of all the errors on your printer.

When compiling *PrintForm* use the following OS-9 command line:

OS9: ccl pf.c -m=4k

This line increases the data space allotted to the program by 4K during the compile. This prevents running out of memory while printing nested files.

If you do not want to type in the *Print-Form* source code listed here, Malaney will send it on a disk for \$15. He includes a copy of the manual on the disk, which can be printed out. Send check or money order to Frank Malaney, 8708 Mink Street SW, Pataskala, OH 43062. Enjoy!

Metric Industries

Model 101 Interface \$39.95

The Model 101 is a serial to parallel interlace Intended for use with a COCO and any Cantronics compatible parallel Input printer. The 101 has 6 switch selectable baud rates (300-9600). The 101 is only 4" ×2" ×1" and comes

with all cables and connectors for your computer and printer.

The Model 104 Deluxe Interface \$51.95

The Model 104 is a serial to parallel interface like the Model 101 but it has the added feature of a serial port (sometimes referred to as a modem switch). This teature allows the connection of a parallel printer and any serial device (modem, serial printer

etc.) to your computer. You may then select either output, serial or parallel, with the tlip of a switch. The 104 is only 4.5' ×2.5' ×1.25' and comes with all cables and connectors for your computer. You supply the serial cable for your modem or other serial device.

Model 103 Combo \$68.95

With the turn of a knob the model 103 switches your computer's RS232C serial port to any one of 3 outpuis — 2 serial and 1 parallel, The serial ports may be used for modems, serial printers or even another computer, The parallel port can

be used with any Centronics compatible printer. The 103 has the best lectures from the 101 and 102: color coded position indicator lights, 6 switch selectable baud rates, heavy anodized aluminum cabinet, and many more.

Model 102 Switcher \$35.95

The Model 102 has 3 switch positions that allow you to switch your computer's serial output between 3 ditterent devices (modem, printers or another computer). The 102 has color coded lights that indicate the switch position. These

lights also ecl as power indicators to let you know your computer is on. Supplied with the 102 ere color coded labels that can be applied to your accessories. The 102 has a heavy guage anodized aluminum cabinet with non-slip rubber teet.

Cassette Label Program \$6.95

New Version 1.2-Tape transferrable to disk. Now save and load Labela from tape or disk.

This tancy printing utility prints 5 lines of information on pinfeed casselte labels. "Cassette Label" is menu driven and is very easy to use. It uses the special teatures of your printer for standard, expanded or condensed characters. Each line of text is automatically centered. Before the label is printed, it is shown on your

THE 101, 103 AND 104 ALL
REOUIRE POWER IN ORDER TO
OPERATE. MOST PRINTERS
CAN SUPPLY POWER TO YOUR
INTERFACE. STAR, RADIO
SHACK, AND OKIDATA ARE JUST
A FEW THAT DO. EPSON DOES
NOT. THE INTERFACES CAN
ALSO BE POWERED BY AN AC
ADAPTER (RADIO SHACK MODEL

MODELS). IF YOU REQUIRE A POWER SUPPLY, ADD A "P" TO THE MODEL NUMBER AND \$5.00 TO THE PRICE. (MODEL 101P \$44.95, MODEL 104P \$56.95 AND MODEL 103P \$73.95)

273-1431 PLUGS INTO ALL

CRT — enabling you to make changes II you like — then print 1, 2 or 100 labels. The program comes on tape and it is supplied with 24 labels to get you started. 16K ECB required.

The Model 101, 102, 103 and 104 will work with any COCO, any level basic and any memory size. These products are covered by a 1 year warranty.

The Model 101, 103 and 104 work with any standard parallel inpul printer including Gemini, Epson, Radio Shack, Okidata, C. loth and many others. They support BASIC print commands, word processors and graphic commands.

We manufacture these products. Dealer inquiries are invited.

Other Quality Items

High Quality 5 Screw Shell C-10 Cassette Tapes \$7.50 per dozen

More C Programs for Beginners

We often get more reaction after we publish a short program than we do when we publish a major application. This was the case with the Cutilities submitted by Robert J. Apida in the September 1985 issue. In fact, those programs inspired Dennis J. Duke of Bessemer, Alabama, to try his hand at programming in C and he has shared his efforts, O. Pak and Vi.

O. Pak performs a task exactly the opposite of Apida's Nores program. It installs the O. Pak standard character set and runs HiRes to install the 51 character-wide screen, Vi uses Nores to kill the Hi-Res screen, calls TSEDIT with its file ID as an argument. Later after you finish using TSEDIT and exit with the ":q" command, Vi calls O. Pak to reinstall the Hi-Res screen, Duke finds Vi useful because TSEDIT works much better when it is run from the standard Tandy OS-9 screen because it has 6K more memory at its disposal, The O. Pak Hi-Res screen alone uses 6K of memory.

O.Pak

This utility loads the O. Pak standard character set from the normal Tandy OS-9 screen.

```
#include <stdio.h>
               "HiRes"
          CMD
#define
#define
          C1.
               15
          C2
#define
                0
#define
          C3
                1
#define
          C4
               27
#define
          C5
               87
#define
          C6
               42
main()
{
   char *CMD line[80];
   strcpy(Cmd line,CMD);
   system(Cmd line);
   Putchar(C1);
   Putchar(C2);
   Putchar(C3);
   Putchar(C4);
   Putchar(C5);
   Putchar(C6);
}
```

This program is very simple and takes the straightforward approach. That's a good way to start with any language. Just for the fun of it, when you get O. Pak. c running. Ity defining the characters needed to print as an array of integers. Then, send them out to the standard output path with Purchar one by one, If that works, try another approach of your own.

Vi

This utility removes the O.Pak Hi-Res screen utility, returns to the standard OS-9 screen and executes TSEDIT with its file ID. After you are finished editing, it returns to O.Pak's Hi-Res screen. It uses the C "system()" function to do this. O.Pak, Nores and TSEDIT must be stored in your current execution directory before you run Vi.

```
#include <stdio.h>
#define CMD1 "NoRes"
#define CMD2 "TSEDIT"
#define CMD3 "o.pak"

main(argc,argv)
int argc;
char *argv[];
{
   char *Cmd_line,CMD1);
   system(Cmd_line);
   strcpy(cmd_line),CMD2);
   strcat(Gmd_line,argv[1];
   System(Cmd_line);
   strcpy(Cmd_line);
   strcpy(Cmd_line,CMD3);
   System(Cmd_line);
}
```

Joysticks in C

Another person experimenting with new frontiers is Eric Richards of Auburn, Alabama. He was so impressed with the new mouse-driven packages at Radio Shack stores nationwide that he wanted to try his hand at programming the joystick ports (Listing A). The value of the 'Y' coordinate returned by Eric's program is the opposite of that returned by the corresponding routine in Radio Shack Color BASIC. The 'X' value returns the same value as the equivalent BASIC routine.

```
Listing A:
#include <stdio.h>
#include <os9.h>
#define void int
#define clear 12 /* clear screen character */
#define home 1 /* home cursor character */
main()
/* Routine checks both joysticks. Press fire button
                                                                    test
/* Test uses OS-9 ISGETSTT system call */
int x,y,fire,choice;
putchar(clear);
for (choice = 0; choice< 2; choice++)
       do
         putchar (home);
         joystck(choice, &x, &Y, &fire);
         printf( "%2d : x=%3d y=3d/n", choice, x, y);
      while (fire-0);
void joystck(num, xvai, yvai, button)
int num, *xval, *yvai, *button;
   struct registers reg;
   reg.rg_x=num;
                      /* x= joystick # (0 or 1) */
                         /* a = path #1 or standard output */
   reg.rg_a=1;
   reg.rg_b=SS_JOY; /* b- function code $13 */
if (_os9(I_GETSTT, &reg)) /* system call */
     printf(" ** ERROR in joystick read/n");
     exit(1);
  *xval=reg.rg_x; /* x- horizontai value */
  *yval=reg.rg_y; /* vertical value */
  *button-reg.rg_a; /* a = fire button ($FF= on)($00- off) */
```

TRS-80 COLOR COMPUTER USERS-MAGAZINE

Sell or trade your unwanted programs or hardware in this monthly newspaper. Find great buys, List your club or BBS. Full of tips, articles, reviews and programs for your COCO. ASIC

J-9 Users Group treasof Kansas City BASIC, has two fixes to that program. You sell to change the source code file applied with the program and reassemble it. Or, you can send your original Kansas City BASIC disk with \$5 for postage and handling to Steve at 8609 East 73 Terrace, Kansas City, MO 64133 and he will do it for you.

Before you change the actual code, edit the line at the label REVS. This sets the revision level of the program module. At the label XP290, delete the following three lines:

> XP290 CMPA #'-BNE XP291 LEAY 1,Y

Replace them with:

XP290 CMFA #\$FF Sub_function 7
BNE XP291 ..No
LDA 1,Y Get Sub-Function Code
CMFA #\$92 Minus Function?
BNE XP291 ..No
LEAY 2,Y Skip Codes

This change fixes a subtraction problem. Now, following the label TSTVE04, find this line:

CMPA #'@ Range Check

Replace it with:

CMPA #\$2F Range Check

Two instructions later, just before the statement;

TST HCLDA+1, U

Insert:

TFR A,B
SUBB #'0 Subtract a zero
CMPB #9 Is is a number?
BLS TSTVE06 .. Yes
CMPB #16 Is is Alpha?
BLS TSTV15 ..No
TSTVE06 EQU *

The last set of changes allows variable names with numerics to be used following the initial required alphabetic character.

Odneal reports that he is getting excellent response to Kansas City BASIC and noted that several users have asked for string and numeric arrays and graphics ability. He notes that graphics would be the easiest and asks that you let him know if you have strong interest in having graphics support in Kansas City BASIC.

A lot of people stop after one major project like Kansas City BASIC, Not Steve! He is working on a Kansas City COBOL compiler for OS-9 and researching a FORTH and C. All will be packaged with the source code provided.

"So much software today is overpriced, unchangeable and poorly documented," Odneal said. "I feel that if users have good

BAStC software with proper documentation, most of them can modify it to meet their own needs. The entire OS-9 community will benefit. If you would like to join this effort, let me know."

Microware Shipping OS-9 FORTRAN

Phyllis Casel, the communications coordinator at Microware, reports shipping the 6809 FORTRAN Compiler in February. The new compiler is a subset of the FORTRAN 77 ANSI standard with a number of powerful extensions. Highlights include the ability to generate code for two- or four-byte integers, single and double precision floating point support, a full math library and an updated C compatible linker and assembler.

If you are looking forward to moving up to an OS-9 68K system, take note. The OS-9 Network file system, which features a user interface similar to the normal OS-9 file system, is also shipping as is a brand new version, 2.00, of the 68K C compiler.

The popularity of OS-9 is growing so fast that Microware is expanding to meet demands.

More Tricks

The new Iniz command in the 2.00,00 version of OS-9 is excellent. It lets you

eliminate the memory fragmentation caused by opening a path to a printer or other device during operation. You simply put the command "Iniz P" in your startup file and go.

When I first tried to run Iniz, without reading the directions of course, I typed "Iniz /p" on the command line and wound up with a nasty error message on my Color Computer screen. I scratched my head and looked at the book only to learn that the programmer who wrote Iniz had dropped the slash, '/' — the same slash that always tells OS-9 to look for a device rather than a file — from the command line syntax. I wonder why? I thought the idea behind OS-9's unified I/O was to make everything consistent.

Now, the good news. If you don't have Version 2.00 and don't plan on getting it for a while, you can emulate the lniz feature with a short program (Listing B) from Steve Goldberg in Bethpage, New York. When you run the program — usually from your startup file — it merely opens up a path to your printer and then closes it before you have had an opportunity to load any other programs in memory. This means the printer buffer is set up at the very top of RAM, leaving you with a continuous block of free memory.

```
Listing B:
 * PBUF -- copyright (c) S, B. GOLDBERG
 * Initializes printer buffer to prevent memory
 * fragmentation.

TEN MOST-ASKED QUESTIONS about DYNACALC®

THE ELECTRONIC SPREAD-SHEET FOR OS-9 SYSTEMS

- 1. What is an electronic spread-sheet, anyway? Business people uses spread-sheets to organize columns and rows of figures. DYNACALC simulates the operation of a spread-sheet without the mess of paper and pencil. Of course, corrections and changes are a snap. Changing any entered value causes the whole spread-sheet to be re-calculated based on the new constants. This means that you can play, 'WHAT IF?' to your heart's content.
- 2. Is DYNACALC just for accountants, then? Not at all. DYNACALC can be used for just about any type of job. Not only numbers, but alphanumeric messages can be handled. Engineers and other technical users will love DYNACALC's fifteen-digit math and built-in scientific functions. With 6809 DYNACALC, you can build worksheets as large as 256 columns or 256 rows (18278 columns or 9999 rows in 68000 versions). There's even a built-in sort command, so you could use DYNACALC to manage small data bases — each row of the worksheet is one record.
- 3. What will DYNACALC do for ME? That's a good question. Basically the answer is that DYNACALC will let your computer do just about anything you can Imagine. Ask your friends who have Lotus 1-2-3, VisiCalc, or similar programs, just how useful an electronic spread-sheet program can be for all types of household, business, engineering, and scientific applications.
- 4. Do I have to learn computer programming? NO! DYNACALC is designed to be used by non-programmers, but even a Ph.D. in Computer Science can understand it. Built in HELP messages are provided for quick reference to operating instructions.
- 5. Do I have to modify my system to use DYNACALC? Nope. DYNACALC uses any standard OS-9 configuration, so you don't have to spend money on another CPU board or waste time learning another operating system.

- 6. Will DYNACALC read my existing data files? You bet! DYNACALC has a beautifully simple method of reading and writing data files, so you can communicate both ways with other programs on your system, such as the Stylo-Graph word processor, Sort/Merge, data base systems, or other programs written in BasicO9, C, PASCAL, FORTRAN, and so on.
- 7. How fast is DYNACALC? Very. DYNACALC is memory-resident, so there is no disk I/O to slow things down. The whole data array (worksheet) is in memory, so access to any point is instantanious. DYNACALC is 100% machine code for blistering speed.
- 8. Is there a version of DYNACALC for MY system? There's a version of DYNACALC for EVERY OS-9 system. Unless you have a CoCo, you need a CRT terminal with at least 80 characters per line, and direct cursor addressing. You can mix different brands of terminal on the the same system. The CoCo OS-9 version is compatible with 80-column hardware cards, or will work with the standard 32x16 screen.
- 9. How much does DYNACALC cost?
 Radio Shack sells the CoCo OS-9 version for S99.95.
 The general 6809 OS-9 version is priced at S250;
 S595 for the OS-9/68k version. Foreign orders add
 S10 per copy for postage. We encourage dealers to handle DYNACALC since it's a product that sells instantly upon demonstration. Call or write on your company letterhead for more information.
- 10. Where do I order DYNACALC?

 If you have a CoCo, order # 26-3275 at your local Radio Shack store. Otherwise, see your local DYNACALC dealer, or order directly from CSC at the address below. We accept telephone orders from 10 am to 6 pm, Monday through Friday. Call us at 314-576-5020. Your VISA or MasterCard is welcome. All orders are shipped on 5" diskette unless you specify otherwise. Please tell us if you need Microware (standard) or Mizar format.

Computer Systems Center 42 Four Seasons Center #122 Chesterfield, MO 63017 USA (314) 576-5020

Eliminating Hard Coding

It bugs me to see a programmer ruin an otherwise excellent piece of software by hard coding system device information into the program itself. Let's study an example.

The new 256K RamDisks available now for the Color Computer make OS-9 operation a dream — if the programmer hasn't hard-coded his program. When I first boot OS-9, I format the RamDisk and backup the disk that contains my current execution directory. Then, I change both the execution and data directories to the RamDisk.

But, what do you think happens when you hit the wrong key while typing a command line? You guessed it, OS-9 reports an error and if you have installed *PrantErr*, you hear drive /d0 start up while OS-9 looks for the proper message to print. I saw this happen a couple of times with dismay.

Here's the fix, At an offset of 0016 — in the 2.00 version of *PrintErr* — you will find the string / D0/SYS/ERRMSG. Use *Debug* to change the / D0 to "...". This tells OS-9 to look in the SYS directory on the parent of the parent of the current data directory. If your current data directory is /R0, the "..." will cause *PrintErr* to look on /R0. If it is / H0, it will cause it to look on / H0. After you have made the change and exited *Debug*, save the module to a disk file. Hew *PrintErr* perhaps, Rename the original to *PrintErr*. Original and then type;

OS9: verify </d0/cmds/newPrintE rr >/d0/cmds/PrintErr U

Desk Mate, the mouse-driven masterpiece from Tandy, has the same problem — it hard codes four separate device names. Fortunately, the four pathlists are coded in only one file, desk. Here is a table with the old values and the new values.

Table 1; Offset Values

00E72F 44 30 (/D0) (old) 2F 52 30 (/R0) (new) or 2E 2E 2E (...)

01102F 44 31 (/D1) (old) 2F 52 30 (/R0) (new) or 2E 2E 2E (...)

01392F 44 30 2F 43 40 44 53 (/DO/CHDS) (old) 2F 52 30 2F 63 4D 44 53 (/RO/CHDS) (new) or 2E 2E 2E 2F 43 4D 44 53 (.../CHDS) (new)

01622F 44 31 2F 43 4D 44 53 (/D1/CMDS) (old) 2F 52 30 2F 43 4D 44 53 (/RO/CMDS) (new) or2E 2E 2E 2F 43 4D 44 53 (.../CMDS) (new)

After you make the changes above, update the desk module's CRC using verify's uparameter. Then, run Desk Mate from your RamDisk and stare back in amazement. Click the button on the mouse a couple of times and Desk Mate will snap to your next application almost instantaneously. It's a lot like running similar software on a Macintosh with a hard disk but a whole

lot cheaper. Despite the fact that applications are all relatively simple, Desk Mate has to be the best thing to hit the Color Computer, since OS-9. In fact, I have a friend here in Washington who uses Desk Mate's text editor to enter almost everything he writes because of the large, easy-to-read characters it displays. If he has a complicated formatting job and needs a more powerful text processor, he simply runs the output file generated by Desk Mate's text editor through a more comprehensive text processor such as DisaStat.

Yet Another Tip

How do you prompt yourself to change disks from a procedure file while doing a single disk copy? One quick way suggested by Brian Lantz, president of the OS-9 Users Group, is to use the OS-9 SLEEP utility command. You always knew there was a use for that command, didn't you? Try this in your procedure file:

-X
Echo
T
* Change Disk then
* Type 'Break' key to continue
-T
Sleep 0
X
(* Rest of procedure file follo
ws the "x" *)

Notice how we used the four built-in Shell commands x_c - x_c t and -t. The -x command in the first line of the procedure above tells OS-9 to ignore any errors on the command line and go ahead with the rest of the procedure file, Without that command, OS-9 would abort the procedure file if it hit an error,

The t command tells the Shell to pass anything on the standard input path through to the standard output path. The -t tells it not to pass this information. Notice how we used the t command in conjunction with the echo command to send more than one line of text in our prompt. Do not lorget the asterisk, '*'. It tells the OS-9 Shell that everything else on the line that follows is a comment and should be ignored.

Auto RamDisk

We recently experimented for a long time trying to come up with a way to switch our current execution directory to /R0/CMDS and our current data directory to /R0 automatically from the startup file. Our first attempt looked something like this:

PRINTERR
XMODE /P1 LF
TMODE .1 -UPC -PAUSE
SETIME </TERM
INIZ P1 T2
FORMAT /R0
YDALE'S RAMDISK
BACKUP #100 /D0 /R0
YY
TMODE .1 FAUSE
CHX /R0/CMDS
CHD /R0

Unfortunately, it didn't work. As soon as this startup procedure file was executed, it sent an End of File signal to OS-9. This killed the Shell running it, and all the changes we made died with the Shell.

Next, we replaced the CHX and CHD command lines with:

EX LOGIN </TERM

We also edited the first line of the file, SYS/PASSWORD. When we were finished it read:

.,0,128,/r0/cmds,/r0,shell

This worked and we wound up in the proper execution and data directories. But when we did a procs command, we found that we had an extra Shell alive. It was the Shell that executed the startup procedure file and it was wasting 6K of memory. As an experiment, I tried to kill the extra Shell hy typing:

OS9: kill 4

That didn't work because OS-9 will not let you kill the parent of a child process that is running. Finally, 1 left the login command line out of the startup file and typed it myself—interactively after the startup command was finished and OS-9 prompted me. This worked and 1 was left with only one Shell! Unfortunately the switch was still only semi-automatic.

Incidentally, we used the tmode -pause command in our procedure file so the backup command wouldn't stop and wait for us to press a key after it filled the screen with reports. Another alternative, if you have installed the new nil device that comes with Version 2.00, is to redirect the output of the backup command to that device, The following command line will do the job for

BACKUP #100 /DO /RO >/NIL.

SysGo: The Real Answer

Robert Larson at the University of Southern California at Los Angeles dropped us a note several months ago to promote the virtues of *Kermii* over *Xinodein*. We quote:

"Kermit has several advantages over Xinadem. It makes fewer assumptions about the system it is running on and the communications path it can use, so it will work on a wider variety of systems," Larson said. "Xinodem is probably still better for what it was designed for - CP/M to CP/ M file transfer over eight-bit data links that can handle bursts of 132 characters, There are hundreds of Kermit implementations and dozens of Xmodem implementations. The central Kermit authority of Columbia University also helps make sure that all versions of Kermit work with each other and that improvements in the protocol are made in a compatible way."

Larson reported that there are at least three separate conversions of the "old" UNIX Kermit to OS-9. He said the latest version he has worked on is based on the Glen Seaton version with connect code from Bradley Bosch and some fixes by James Jones. It is available via the normal Kermit distribution channels at Columbia University. He reported that he has also posted 35 copies, including four to Europe and one to Australia, via UUCP USENET mail. The Glen Seaton version is available in the OS-9 Users Group Library and on CompuServe.

We feature here a replacement SysGo module Larson contributed. It is smaller and faster than the original, but more importantly, it holds the clues to making the automatic change to alternate execution and data directories.

SysGo is an OS-9 program that just happens to be the first process to run when booting the system. Essentially, it does three things: executes the procedure file, startup; starts your first process—read program and usually a Shell; then, it simply waits for all other processes to die.

son squ *

If you look at the previous code, you will notice that Larson's version of SysGo goes into a wait state just before the label, "restart." If for some reason the original Shell that it has just started were to die, SysGo will automatically restart another

             if((input_file = fopen(argv[1],"r")) == NULL)
```

Shell, This keeps you from crashing the system if you accidentally kill all the processes running.

When OS-9 runs the SysGo program it automatically sets the execution directory to /D0/CMDS, It knows that /D0 is the startup device because it looked in the Init module, which is simply a look-up table that holds the initial information needed to start the system. Information stored in Init includes the upper limit of RAM memory, the number of entries in the IRQ polling table, the number of entries allowed in the system device table, the name of the first program to run (most often SysGo, the name of the device that holds the default directory - usually, / D0, the device that becomes the standard input and output paths) and, finally, the name of the bootstrap file, os9boot, in the case of Color Computer OS-9,

The secret to changing data and execution directories to /R0, or even /H0, is to add some code to change those directories. However, since a RamDisk doesn't exist until the start-up procedure file runs format and backup to create it, you cannot add this code until after SysGo runs the start-up procedure. You will need to add two new labels just in front of the CMDS label in the SysGo listing. Something like this:

newdir fcc "/RO"
fcb c.cr
newexe fcc "/RO"
Cmds fcc /Cmds/ resume old code here

Then, after the OS-9 f\$wait call, just in front of the existing "restart" label, add the following code:

The code creates a Shell and runs the programs that have been placed in the start-up procedure file. When the start-up file ends, OS-9 receives an EOF signal and the Shell that ran the procedures dies. When this happens, execution continues with the new code that changes the current data directory to /R0 instead of /D0 and the current execution directory to /R0/CMDS instead of /D0/CMDS. After SysGo runs your code, it falls into the code at the label restart where it starts another Shell.

This SysGo module was written for Version 1.00 and 1.01. It should also work with Version 2.00. However, it does not start the clock module like the SysGo that comes with Version 2.00. If you use this version, you need to start the clock with the setime command in the startup file,

To install this SysGo module you go through several steps. First, assemble the code using the asm command that comes with OS-9. Then, replace the original SysGo with your version in a new OS9Boot file using OS9Gen. Hopefully, Larson's code and our short notes have removed some of the mystery surrounding SysGo and you feel

free to experiment and customize your system to your heart's content. Let me know how it works out and if you really come up with a unique version be sure to share it with us.

Users Group Sports First Online Recruit

Congratulations to John M. Graf of Riverside, California. John was the first person to join the group online using the new services available on THE RAINBOW'S Delphi Color Computer SIG. His Username is JMFG if you want to say hello.

RAINBOWfest-Palo Alto was a big one for the OS-9 community. Paul Searby gave an inspiring keynote speech at the first OS- 9 buffet breakfast attended by more than 60 people. Brian Lantz presented an excellent seminar for OS-9 users and was kind enough to fill in during the first half of my seminar when snow in Washington and rain in California delayed my arrival Saturday.

We saw an interesting approach to OS-9 in a new Winchester BASIC product from Owl Ware in Palo Alto. Interesting idea and we'll be telling you a lot about it with information direct from its author, Alan Reinhart, next month.

The OS-9 community certainly has its heroes and they strive to make your entry into the world of OS-9 Version 2.00 easier, Included in our list of good guys are Ed

Bender at PBJ, Dan Johnson at D.P. Johnson and Paul Searby at Computerware. All had to dive for the disassemblers as they hustled to rewrite new drivers that would run on Version 2.00 of OS-9. Next month, we'll take an in-depth look at this new version of OS-9 and try to let you know what you can do with it.

During the evolution, our aforementioned heroes entered several new packages into the utility arena. We'll feature some of the more advanced products, especially Brian Lantz's kShell, here next month. Once you use the kShell, which is modeled after the Shell in OS-9 68K, you'll never go back. Until then, keep on hacking.

```

The Universal MacInker(s) are here

Re-ink any Fabric ribbon automatically for less than

5¢

Now one Universal Cartridge MacInker (UC) re inks all fabric cartridges and one Universal Spool MacInker (US) re inks all spools. We have MacInker(s) dedicated to specialized cartridges, zip pack, har-monica etc. Over 1000 printer brands supported. Use your **MacInker** to reink your dry, fabric cartridges (for less than 5 cents in ink) and watch the improvement in print-out quality. Our new, residue-less, lubricated, dol matrix ink yields a darker print than most new ribbons. Or get any of our basic ink colors: brown, blue, red, green, yellow, purple and use MacInker to create and/or Re-ink your own colored cartridges. We have uninked or colored cartridges for the popular printers and ribbon re-loads for any printer. Operation is extremely simple & automatic with new, twin drive electric motor that supports CW and CCW rotating cartridges A good quality labric ribbon of average length can be re-inked almost indefinitely. In our lests one reinked Epson* 80 ribbon has outlived the estimated life of the print head! We receive consistent & similar feed back from our customers. As of

INKER(s) in the field, in 5 continents (220 V motors available). MacInker (UC) is \$60.00. Cartridge drivers are \$8.50/ea. We still have our first generation, dedicated MacInker(s) for most popular printers. Prices start at \$54.95 with most units below \$60.00. MacInker has been reviewed, approved and flattered in most magazines and even in the NEW YORK TIMES and the CHICAGO SUN TIMES.

August 85 we have over 40,000 MAC

Educational Programs

Questions

Questions - a powerful, easy to use, authoring program! Questions has as many uses as its owners have creativity. Teachers have used Questions to develop pre and post tests, to make copies of the same test with questions in a different order, and to review and reinforce difficult lessons with their students. But Questions is not limited to school uses. Enterprising people have found other uses for it. Party-givers have used it to personalize games for baby and wedding showers, and for creating their own trivia games. Adminis-trators have used it for inservice training. Children have written their own riddles with it, if you own Questions, you'll find a way to use it. You will also be pleased with its many fine features:

Word processing commands that allow you to make changes as you type

Screen commands so you do not have to constantly refer to the manual

Options to take the gulz on the computer or to print a hard copy of it Sequential or random presentation of

questions

The ability to print the same test with questions in a different order The printing of an answer key

The option to use expanded printer lettering to create large print tests.

The ability to save quizzes to cassette

A review feature which permits sludents to study questions that have been missed

A record keeping system.

THE PERSON AS A SECOND AS A SECOND PORT OF THE PERSON ASSESSED FOR THE PERSON AS A SECOND PORT OF THE PERSON AS A SECOND POR

Multiple choice, true/false, or fill in the blank formats.

Questions is truly a professional authoring program that meets the needs of all of its users.

Reading Comprehension Series Grades 2 - 4

B5's Reading Comprehension Series is a set of data files to be used with the Questions program described above. Each file contains over 100 questions, organized into 6 to 8 sequential lessons. Lessons build from simple to complex. This series emphasizes the thinking aspect of reading. Simple sentence structure allows the student to concentrate on thinking skills.

Main Idea ★ Sequencing Fact & Opinion ★ Cause & Effect

Each Title: Cassette - \$10.95 Disk \$12.95 Complete Series of 4 Titles: Cass. • \$39.95; Disk • \$41.95

OS-9™ SOFTWARE/HARDWARE

SDISK—Standard disk driver module allows the full use of 35, 40 or 80 track double sided disk drives with COCO OS-9 plus you can read/write/format the OS-9 formats used by other OS-9 systems. (Note: you can read 35 or 40 track disks on an 80 track drive). Now updated for OS-9 ver. 02.00.00 \$29.95

SDISK + BOOTFIX—As above plus boot directly from a double sided diskette \$35.95

Lt UTILITY PAK—Contains all programs from Filter Kits Nos. 1 & 2 plus Hacker's Kif #, plus several additional programs, Over 35 utilities including "wild card" file cmds, MacGen command language, disassembler, disk sector edit and others. Very usetul, many of these you will find yourselt using every time you run your system. These sold separately for over \$85, \$49.95

SKIO—HI res screen driver for 24 x 51 display; does key click, boldtace, Italics; supports upgraded keyboards and mouse. With graphics screen dump and other useful programs. Now UPDATED FOR OS-9 Ver 2.0 \$29.95

PC-XFER UTILITIES— Utilities to read/write and format ss MS-DOSTM diskettes on CoCo under OS-9. \$45.00 (requires SDISK)

CCRD 512K Byte RAM DISK CARTRIDGE—Requires RS Multipak interface, used with driver software below provides 1/2 MB OS-9 RAM disk. \$259.00 (Prices subject to change).

CCRDV OS-9 Driver Software for CCRD-\$20.00

All disk prices are for CoCo OS-9 format; for other formats, specify and add \$2.00 each. Order prepald or COD, VISA/MC accepted, add \$1.50 S&H tor software, \$5.00 for CCRD; actual charges added for COD.

```

The Crossword Creator Contest

Can you create a totally symmetrical crossword puzzle with the Word+ program and the specifications outlined in the accompanying article on Page 38 of this issue? If so, you may wish to enter The Crossword Creator Contest. And, if we choose to print your crossword puzzle, you will be awarded a special prize.

Send us a disk or cassette copy of the data file of your puzzle created by Word+ along with a printed copy of the crossword puzzle — including the clues and answers. Be sure to put a title on the puzzle and if possible, follow a general interest theme.

Entries will be judged on the following criteria:

Puzzle symmetry Number of words Spelling Creativity Thematic originality Understandability Ease of loading data Neatness Packaging

Enter as often as you like! Please note: We consider your act of entering the contest as consent to publish your creation.

The Crossword Creator Contest is open to all RAIN-BOW readers, advertisers and employees of Falsoft, Inc.

Send entries to:

The Rainbow Bookshelf

The Complete Rainbow Guide To OS-9

The book that demystifies the state-of-the-art operating system for the Tandy Color Computer. Authors Dale L. Puckett and Peter Dibble show you how to take advantage of OS-9's multi-tasking and multi-user teatures, and the capability of redirecting input and output commands at will. An easy-to-read, step-by-step guide packed with hints and lips, tutorials and free software in the form of program listings.

Book \$19.95, Disk \$31.00 (2 disks, book not included)

The Rainbow Book of Simulations

Features 20 award-winning entries from THE RAINBOW's first Simulation programming competition. You are the Commander-in-Chief of the Confederate Army during the Civil War, an air traffic controller at one of the nation's busiest airports, the owner of your own software business, a civil defense coordinator in charge of saving Rainbow City from a raging flood, a scientist conducting experiments on Mars... Your wits are on the line. Book \$9.95, Tape \$9.95

First The Rainbow Book of Adventures

A collector's ilem containing 14 winning programs from THE RAINBOW's very first Adventure contest, Includes such favorites as Sir Randolf of the Moors, Search for the Ruby Chalice, Deed of the York, Horror House, One Room, The Door and Dr. Avaloe. Plus, hints and tips on solving Adventures.

Book \$7.95, Tape \$7.95

The Second Rainbow Book of Adventures

Our newest arrival leatures 24 of the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanies, find a hidden fortune, or win the heart of a beautiful and mysterious princess, Experience the thrills and chills of the most rugged Adventurer without ever leaving your seat, Ring Quest, Secret Agent Man, Dark Castle, Curse of Karos, Island and more!

Book \$13.95, Tape \$13.95

- arallel Printer or

- Er Admir jogrami jog of User Projects Complete Radio Shack compatibility

- New technology; no adjustments needed Very Accurate 16mhz High Speed Master Clock Needs + 5 volts only: works on all COCOs or COCO IIs.

PANSION ADD-ONS:

there are currently four add-ons available from DISTO for this controller;

The first is a Centronics Compatible Parallel Printer adapter.
This adapter will allow you to conflect a Centronics compatible printer directly to your controller, leaving the serial port of your domputer free for your modem. Printer driver software included.

.

The second is a Real Time Clock. This is a clock chip that will keep the proper time, date and year. A small battery keeps the time when the Computer is off, retreive and set the time by using simple Basic POKES. Also available with the Real Time Clock is the optional Centronics Compatible Parallel Printer adapter. Software to set the clock and printer driver included.

MPROM

The third is a Mini EPROM Programmer. Yes, a low cost programmer that attaches to the disk controller. A must for the DISTO Super Controller. Program those often used utilities into EPROM and plug them directly into your controller. Will program 2764's or 27128's, a perfect mate for the DISTO Super Controller.

DISPLAY80

The fourth is a real knock-out. This is a three in one card. It's major function is to add an 80 * 24 display to your computer. A feature packed package also includes HTIME and PPRINT. All in one neat package that fits inside the controller. OS9 software available. Call for more information.

The DISTO Super Controller, add-ons and all its documentation are conceived and designed by Tony Distelano. The DISTO Super Controller and add-ons are manufactured and distributed by: C.R.C. COMPUTER INC. 19802 Lajeunesse, Montréal, Québec, Canada H3L 2E8 1-514-383-5293

*DISTO and CAC Computers are registered trade marks. The OISTO Sup Controller and add-ons are copywrited by DISTO.

HEAT UP YOUR COCO!

JeW HARD DRIVES

Besides the obvious advantage of increased disk access speeds and a vast amount of storage, our COCO hard drives boast many innovative features. For instance,

you may boot OS/9

directly from JDOS · no intermediate boot floppy is required. Our software can run with virtually

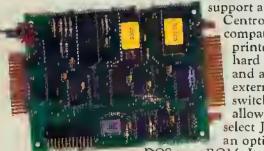

any winchester with a

ST412 type interface. Our drives have capacities of 5. 10, or 20 MBytes (formatted), and may be either partitioned into up to 7 logical units or left as one large logical unit. Our COCO hard drive systems are complete with case, power supply, cables, OS/9 drivers, and instructions. Prerequisite: OS/9, JFD-CP controller.

51/4"	5 MByte full size	
54"	10 MByte 1/2 size	
31/2"	20 MByte (shown	above)

JFD-CP DISK CONTROLLER

Our new JFD-CP, compatible with both the original COCO and the COCO 2, features a parallel port to

Centronics compatible printer or our hard drive. and an external ROM switch, which allows you to select JDOS or an optional RS DOS-type ROM. It comes in

\$495

\$650 \$795

\$99

a case and includes JDOS 1.2 and manual. JDOS implements all RS DOS commands, plus many more, including auto line numbering, error trapping, baud rate selection, OS/9* boot from floppy or hard drive, and Memory Minder**, our disk drive analysis program (Precision Alignment Disk not included).

JFD-CP Disk Controller with JDOS \$139

COCO-CLASSIC

Our old JFD COCO controller remains a strong seller. Some people just like old "classics" best! So we have brought it back at the lowest price ever!

JFD-COCO Disk Controller with JDOS
